METRORapid University Corridor

Preface: Categorical Exclusion Checklist/Report Appendices

December 2023

Preface: Categorical Exclusion Checklist/Report Appendices

These Appendices to the Categorical Exclusion Checklist/Report contain all of the environmental analysis reports completed for all the areas required under the National Environmental Policy Act (NEPA): Land Acquisitions and Displacements, Historic Resources Survey Report and Addendum, Archaeological Survey and Work Plan, Section 4(f) Evaluation (documents the use of park and recreation lands, wildlife and waterfowl refuges, and historic sites in accordance with Section 4(f) of the U.S. Department of Transportation Act), Environmental Justice, Hazardous and Contaminated Materials, Noise and Vibration, Biological Resources, Water Resources, and Traffic Analysis.

Table of Contents
Appendices

APPENDIX A – Lockwood Underpass
APPENDIX B – Public Involvement
APPENDIX C – Technical Reports
- **APPENDIX C-1 – Land Acquisitions and Displacements Technical Memorandum**
  - Appendix A Lists of Acquisitions and Maps
- **APPENDIX C-2 – Historic Resources Survey and Section 106 Historic Resources Survey Addendum**
  - **Historic Resources Survey**
    - Appendix A - Segment 1: Historic Resources Survey Result Maps, Photo Sheets, and Tables
    - Appendix B - Segment 2: Historic Resources Survey Result Maps, Photo Sheets, and Tables
    - Appendix C - Segment 3: Historic Resources Survey Result Maps, Photo Sheets, and Tables
    - Appendix D - Segment 4: Historic Resources Survey Result Maps, Photo Sheets, and Tables
    - Appendix E - Segment 5: Historic Resources Survey Result Maps, Photo Sheets, and Tables
  - **Section 106 Historic Resources Survey Addendum**
    - Appendix A - Consulting Party Input
    - Appendix B - Updated Segment 4: Historic Resources Survey Result Maps, Photo Sheets, and Tables
    - Appendix C - Streetscape Photos for the Third Ward and Eastwood Historic Districts
- **APPENDIX C-3 – Archaeological Survey and Archaeology Mitigation Work Plan**
  - **Archaeological Survey**
  - **Archaeology Mitigation Work Plan**
- **APPENDIA C-4 - Section 4(f) Evaluation Report**
  - Appendix A - Parks and Recreation Areas in the Study Area
  - Appendix B - Correspondence with Officials with Jurisdiction
  - Appendix C - Site Photographs
- **APPENDIX C-5 – Environmental Justice**
  - Appendix A - Demographic Tables
  - Appendix B - Demographic Figures
  - Appendix C - Potential Acquisitions and Displacements Figures
  - Appendix D - Public Involvement Information
- **APPENDIX C-6 – Hazardous and Contaminated Materials Technical Report**
  - Appendix A - Figures
  - Appendix B - Phase I ESA, 3520 S. Shepherd Drive
  - Appendix C - Phase I ESA, 4516 Harrisburg Boulevard
  - Appendix D - Phase I ESA, 1025 Lockwood Drive
- **APPENDIX C-7 – Noise and Vibration**
  - Appendix A - University BRT Noise Model Maps
  - Appendix B - University BRT Noise Survey Plots
- **APPENDIX C-8 – Biological Resources**
  - Appendix A - City of Houston Tree List
  - Appendix B - Surveyed Tree Maps

Appendix C - Site Photographs

APPENDIX C-9 – Water Resources Technical

Appendix A – Site Photographs

Appendix B – Wetland Data Sheets

Appendix C – Proposed Underpass Information

APPENDIX C-10 – Traffic Analysis

Appendix A - Existing Traffic Counts

Appendix B - Background Projects Included in the TDM

Appendix C - Existing Conditions Model Calibration Data

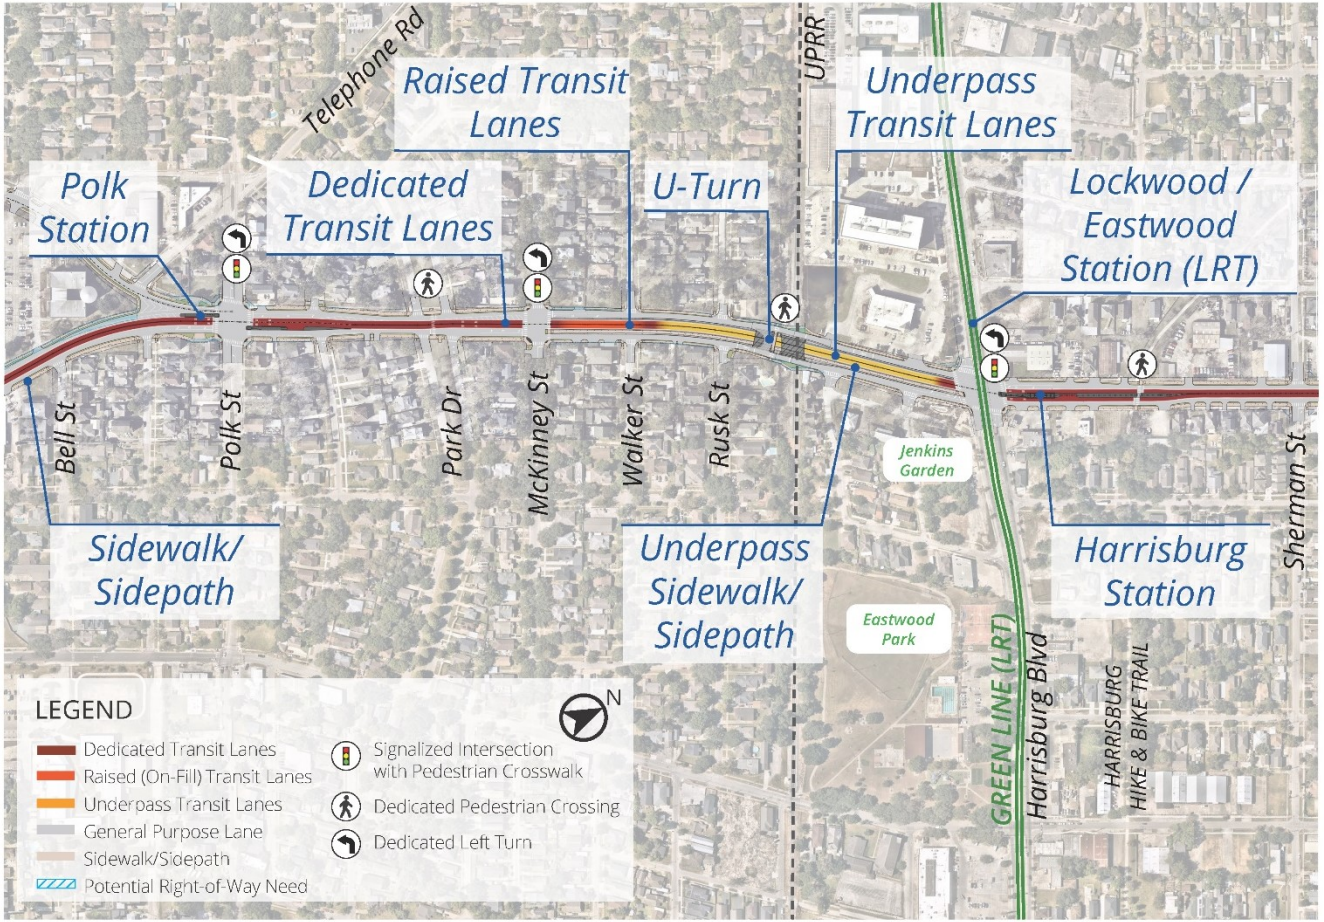
Appendix D - Existing Conditions LOS Results

Appendix E - 2030 No-Build LOS Results

Appendix F - 2030 Build LOS Results

Appendix G - TransModeler WhitePaper

Appendix H - TransModeler Signal Timing Reports – Build Conditions

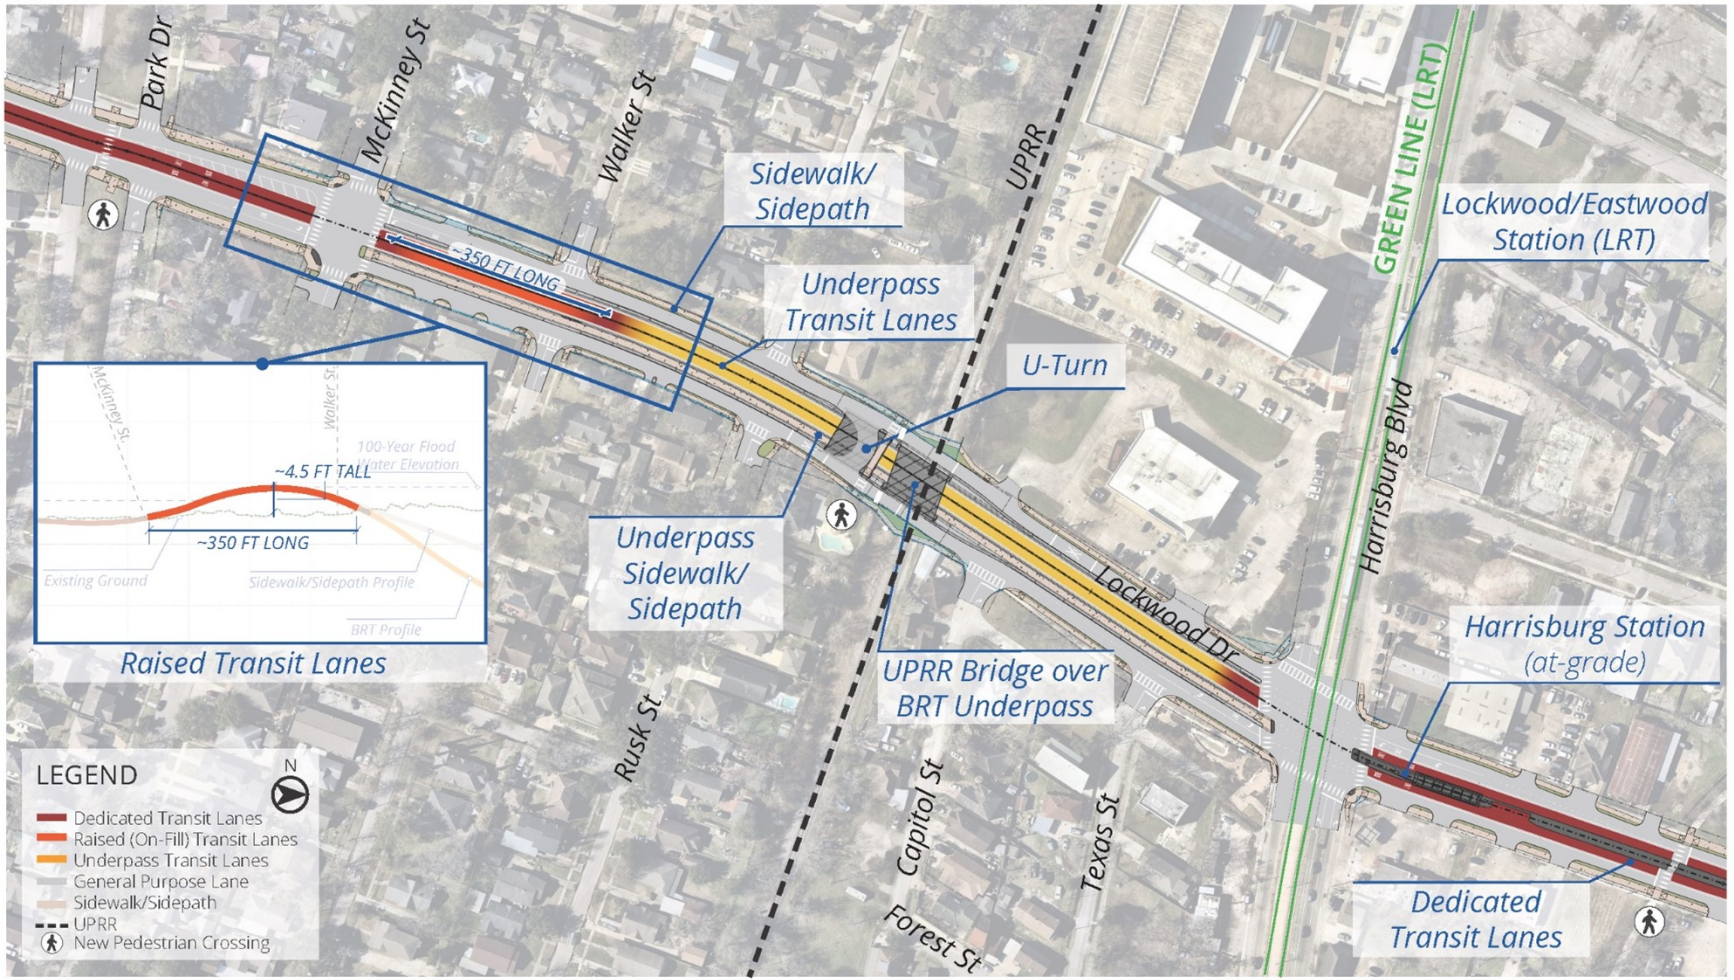


Appendix I - Traffic Mitigation Scenario Exhibits

Appendix J - 2030 Build Queue Lengths

Appendix K - University Corridor BRT: MOU between METRO and COH

Appendix L - Throughput Methodology and Findings



APPENDIX A – Lockwood Underpass

Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

APPENDIX C – Technical Reports

APPENDIX C-1 – Land Acquisitions and Displacements Technical Memorandum

METRORapid University Corridor

Preface to Design Documents

DATE: May 31, 2023

PREFACE

The intent of this Preface is to provide context to the various design documents received as part of the 30% submittal and to highlight previous efforts that helped establish the current design.

The paradigm of the METRORapid University Corridor Bus Rapid Transit (BRT) project (the "University Corridor" or the "Project") is **to repurpose the use of the existing Right-of-Way (ROW) to provide maximum mobility benefit for all travel modes while minimizing impacts**. The additional mobility benefits include the use of high-capacity, low-no emission transit buses, which carry more people than vehicles in the same space; wider pedestrian spaces with buffer zones; shared use pathways to accommodate bicycle travel; and an overall safer roadway design that aligns with Houston's Vision Zero principles. The impacts considered for the Project include minimizing additional ROW needs, maintaining acceptable vehicle traffic conditions on a transit-priority street, preserving existing trees, avoiding conflicts with major utilities, utilizing existing bridge structures with minimal modifications and reducing the amount of additional impervious area within the ROW in order to minimize potential flooding along the corridor.

To maximize the mobility benefits and minimize overall impacts, the Project design approach is to utilize the existing roadway footprint to service both the BRT and general purpose lanes. In general, one of the existing general purpose lanes in each direction would be converted to a dedicated BRT lane where the alignment is within the City of Houston (COH) ROW. This approach would introduce high-capacity transit buses onto existing streets within an exclusive BRT guideway, while minimizing impacts to the existing features within the COH ROW. With the removal of a general purpose lane in each direction, it is anticipated that vehicle traffic capacity will be reduced and impact traffic conditions. However, METRO and COH share the goal of prioritizing person throughput over vehicle throughput: simply stated, **the vision is to move more people in less space**. This shared goal is documented in a *Memorandum of Understanding* (MOU) approved by both entities on August 22, 2022, which is included as an appendix in the *Traffic Analysis,* dated May 31, 2023.

As the majority of the University Corridor will operate within COH ROW and along COH streets, continuous and constant coordination with COH during conceptual and preliminary design phases was paramount. Initial discussions of the person-throughput prioritization occurred early in the project to ensure all parties agreed with the approach. With input from COH, METRO developed a throughput methodology and provided some initial findings. This was documented in a *Throughput Methodology and Findings* memorandum prepared and updated by METRO on March 9, 2022, which is included as an appendix in the *Traffic Analysis*, dated May 31, 2023. Additional discussions with and input from COH continued as the traffic analysis and design progressed incorporating the conversion of general purpose lanes to BRT lanes and towards the 30% design milestone.

The traffic modeling and design efforts were performed in parallel with constant coordination to ensure that the lane configurations in both the traffic model and the design plans coincided with each other. As the traffic analysis focused on the impacts to vehicle traffic conditions, the design considered impacts resulting from ROW limitations, locations of existing trees and major utility facilities, existing roadway and bridge sections and the results of drainage analyses. At certain intersections within COH ROW with a projected vehicle Level of Service (LOS) that was less than desirable, several mitigation scenarios were analyzed to improve the LOS while considering the above referenced impacts with ROW needs being the most influential. These intersection locations and mitigation scenarios were discussed with COH during several coordination meetings. A summary of these meetings and the tables and exhibits prepared are included in the *Traffic Analysis*, dated May 31, 2023. These documents show the lane configurations considered for each mitigation scenario as well as demonstrate the trade-offs required to implement each scenario. As a result of these meetings, the preferred lane configurations were selected and included in the traffic model and in the design documents.

As part of the multi-modal approach for the Project, improved pedestrian mobility is also being considered. A pedestrian realm that is located between the back of curb or edge of pavement and the edge of ROW is included along the corridor that provides an unobstructed sidewalk or sidepath and a safety buffer area that separates the sidewalk from the roadway. Ideally, the pedestrian realm would be wide enough to accommodate both people walking and biking. However, the University Corridor extends along existing ROW of various widths and through different area types, including neighborhoods, businesses and schools. Considering these factors, the pedestrian realm dimensions will vary to remain sensitive to the area's local context and to minimize impacts to ROW. Where dimensions are less than desirable, discussions with COH have occurred to receive feedback and input. In a limited number of locations, design exceptions will be required to justify smaller pedestrian realm dimensions than COH standards and will need to be approved by COH as designs are progressed. Pedestrian design and exceptions are noted in the *Basis of Design* (BOD) documents for each Segment.

To further enhance pedestrian mobility, additional pedestrian crossings are being proposed along the University Corridor. In general, pedestrian crossings are provided at all of the signalized intersections along the alignment. However, this results in sections along the corridor with relatively long distances between proposed crossing points. With feedback and general guidance from COH, additional crossing locations are proposed that consider, among other factors: key destinations, local bus stops, distances between crossings and safety. These proposed pedestrian crossings will significantly enhance the ability of people to cross the BRT alignment by walking or biking at regular well-space intervals. These additional pedestrian crossings are reflected in the 30% design submittal.

1 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

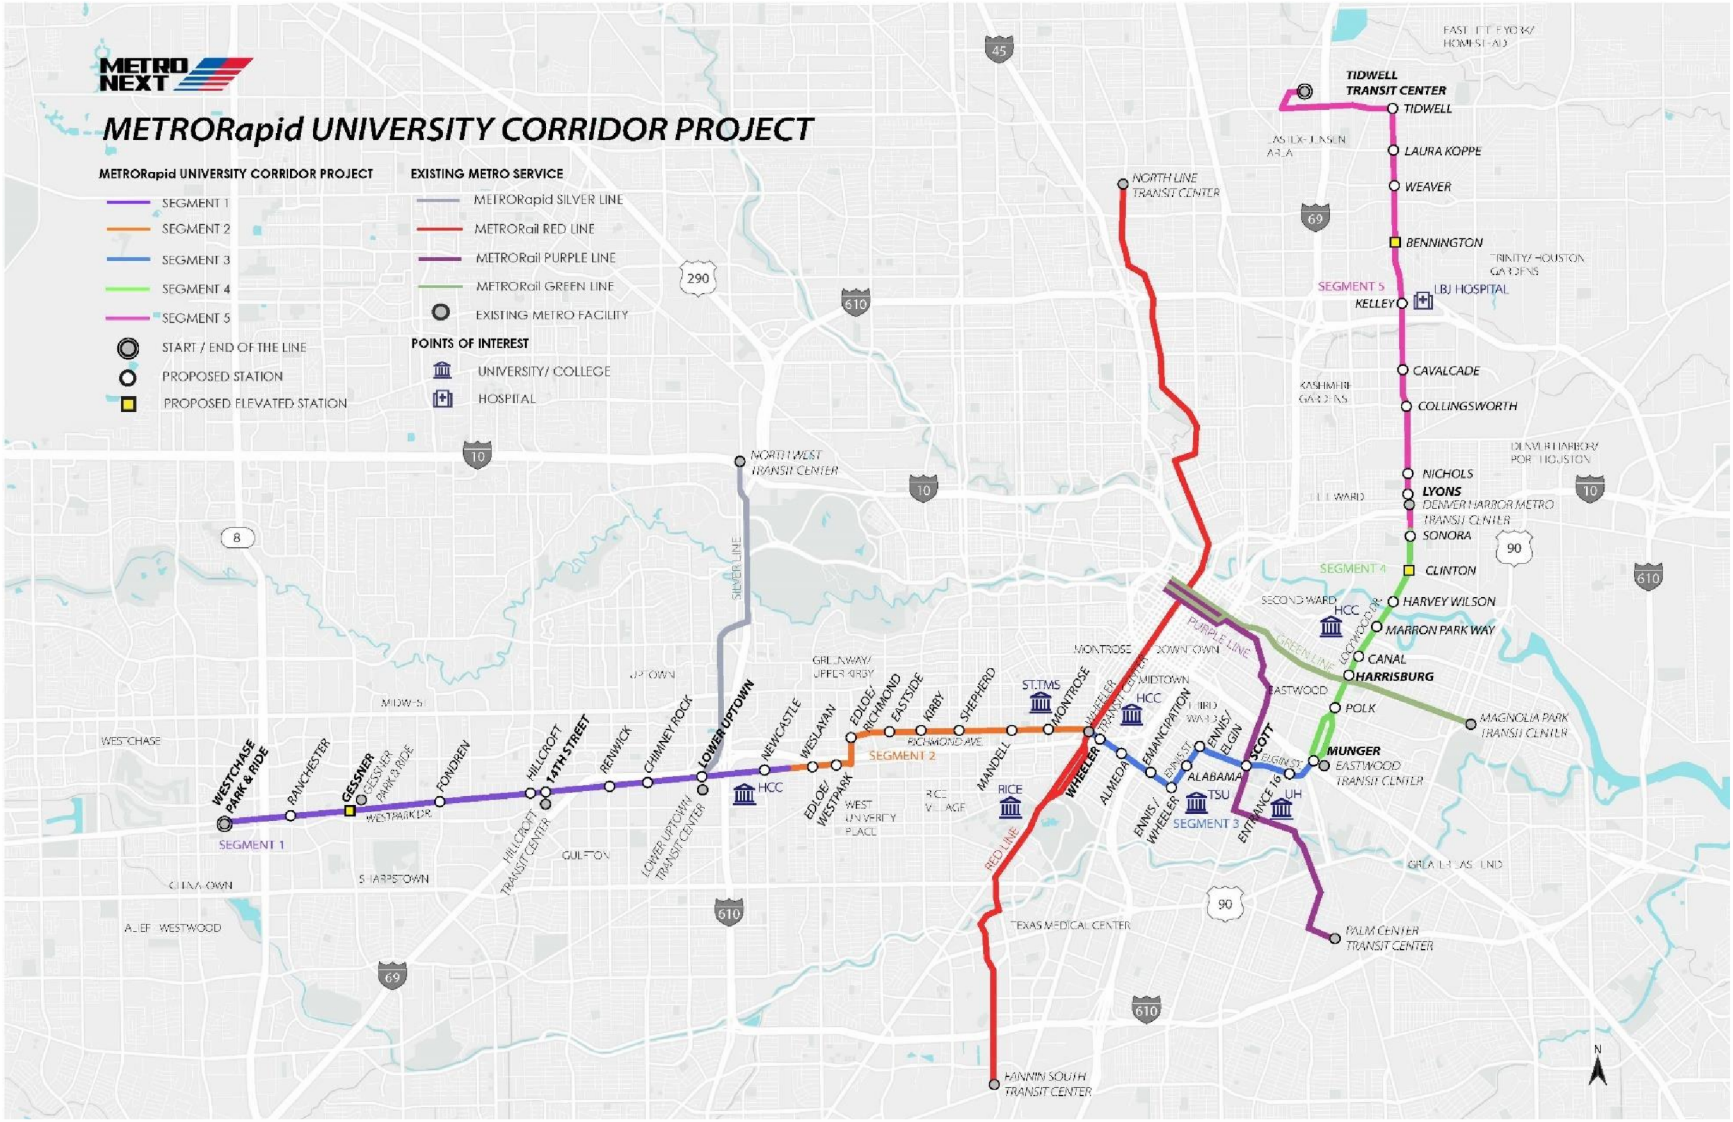
1.1 Purpose of Report

This report describes the potential property acquisitions that could result from the Project. It also describes minimization strategies that METRO has taken to eliminate or reduce acquisition, as well as potential mitigation strategies that METRO will undertake as the Project advances to offset impacts. This report is based on the 30 percent preliminary engineering design. As the Project advances, the design will be refined to further reduce real estate impacts.

1.2 Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1. Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.



The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other service like METRORail, METRORapid, and local bus services. Two stations would be incorporated into existing METRO facilities, Westchase Park & Ride and Tidwell Transit Center. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

Table 1-1: University Corridor Segments

SEGMENT	FROM	TO
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Dr
2	Westpark Dr 1,500 feet east of UPRR tracks, east of Newcastle Dr	Richmond Ave at US-59
3	Richmond Ave at US-59	Elgin St at I-45 (Eastwood Transit Center)
4	Elgin St at I-45 (Eastwood Transit Center)	Lockwood Dr at Margarita St.
5	Lockwood Dr at Margarita St.	Tidwell Transit Center

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

Figure 1-1: University Corridor Proposed BRT Alignment

2 Methodology

2.1 Identification of Properties to be Acquired or Displaced

METRO differentiated acquisitions and displacements based on the type of property being acquired, including commercial, residential, and community resources. METRO obtained property information from the Harris County Central Appraisal District (HCAD) database and verified the condition and location of property and structures identified for acquisition or displacement through field visits and aerial photography.

METRO identified parcels to be fully or partially acquired, or that would be subject to an easement, based on the proposed ROW limits of the Project using aerial-based geographic information systems (GIS) parcel mapping with data obtained from the Harris County Central Appraisal District. METRO assumed a full acquisition if the whole property would be acquired for the Project. METRO assumed a full acquisition would also result in the displacement of the occupant(s). Further, if the acquisition would remove access to the property, METRO also assumed a displacement. METRO assumed that a partial acquisition if primary buildings, the majority of the property, parking, and access to the property would be preserved.

The following types of potential actions are described in this section:

- **Corner Clip –** a type of partial acquisition that cuts across the corner of the property forming a triangle. The City of Houston *Infrastructure Design Manual* (IDM) (2022) requires corner clips at intersections to accommodate space needed for traffic signal poles, pedestrian signal poles, sidewalks, handicapped ramps, and vehicular turning movements. The IDM requires corner clips for driver site lines at intersections.

- **Partial Acquisition** - the purchase of a portion of a property that does not affect buildings or the property's site features. A partial acquisition could include fee simple (permanent transfer of ownership) or permanent easement (for drainage, utilities, etc.). Permanent easements would not result in a transfer of ownership. Rather, ownership would remain with the current landowner, but the easement would allow another entity to use the land for a specified purpose.

- **Full Acquisition** - the purchase of all land ownership rights and interest in a property. A full acquisition is an acquisition that either severely impacts a building or the property's site features, which affect the property's intended use. This loss of parking severely impacts the property's intended use. Similar to a partial acquisition, a full acquisition could include fee simple (permanent transfer of ownership) or permanent easement (for drainage, utilities, etc.). Permanent easements would not result in a transfer of ownership. Rather, ownership would remain with the current landowner, but the easement would allow another entity to use the land for a specified purpose.

- **Displacement-** this would result from full acquisition or partial acquisition and conversion of the existing land use to transportation use. If the acquisition would result in the removal of

parking available and noncompliance with parking requirements, then METRO assumed a displacement. If the acquisition would remove or deny access to the property, METRO assumed a displacement. Displacement could also result where partial acquisition of a property includes a building. In the case where multiple tenants occupy a single tax parcel, METRO counted each tenant or household.

2.2 Displacement Analysis

The analysis of the impact of land acquisitions and displacements on the community as a result of the Project consisted of documenting all residential and non-residential units within the study area and describing the existing characteristics of potentially displaced buildings. The study area is comprised of abutting properties along the proposed alignment.

METRO sought to use existing linear transportation and utility ROW in developing the Project to minimize the need to acquire private property. By using this approach, most land area that METRO would need for the Project could be accommodated. However, some property acquisition and relocation of existing users of the properties would also be required to provide adequate ROW for the Project to accommodate station locations and other equipment along existing corridor. For partial acquisitions, METRO assumed only the portion of the parcel falling within the proposed ROW footprints would be acquired.

3 Existing Conditions

There are roughly 1,800 properties that are adjacent to the proposed alignment. Land uses along the University Corridor vary from residential to commercial to undeveloped. Changes to land use in the study area were analyzed to observe and predict potential issues, like community resources and habitat, as they related to project development. The properties adjacent to the proposed alignment are mostly developed with few vacant parcels. . The study area also has more industrial land, with significant freight rail and port facilities located in the eastern part of the study area. Along the University Corridor, there is more multiple land use areas compared to the City of Houston and Harris County as well. Multiple land use refers to an area used for more than one purpose. For example, commercial and residential land use occurring in the same designated area would be considered multiple land use. Segment 1 is diverse, with a more even mix of residential, commercial, and industrial uses. Other areas are relatively homogenous: over 80 percent of developed land in Segment 2 is residential or commercial. Segments 3 and 5 are predominantly residential, while Segment 4 is a mix of mostly residential, commercial, and industrial sites.

4 Environmental Consequences

4.1 Short-Term Construction Impacts

Temporary construction easements would be needed for staging and parking areas as well as maintenance of traffic and construction access. METRO anticipates that multiple staging areas would be used; some of which may only be used for part of the construction period. Temporary construction activity in staging areas and construction easements would convert the existing land on which they occur to a temporary construction use; the owner of such lands would temporarily lose the use of that land until construction activity ends. Features on that land, such as buildings and trees, may be

removed. The priority will be to identify vacant parcels for temporary construction easements. Specific construction staging and parking areas as well as construction access points will be identified as the Project advances.

4.2 Long-Term Operational Impacts

METRO sought to use existing linear transportation and utility ROW in developing the Project to minimize the need to acquire private property. By using this approach, most land area that METRO would need for the Project can be accommodated within the existing ROW. However, some acquisitions and relocation of existing users of the affected properties will also be required to provide adequate ROW and accommodate station locations and other equipment along existing corridors. In this assessment, a full property acquisition is assumed to also be a displacement of the occupant(s). For partial acquisitions, only the portion of the parcel falling within the proposed ROW footprints is assumed to be acquired. Final determinations regarding property needs and acquisitions will be made by METRO during the final design phase of the Project. A complete list of parcels identified in this analysis and a set of maps can be found in **Appendix A**.

Table 4-1 summarizes METRO's preliminary determination of the potential full and partial property acquisitions that would be needed for the Project based on the 30 percent level of planning and schematic design. Overall, based on the preliminary design, the Project would result in 23 full acquisitions, 110 corner clips, and 448 partial acquisitions, affecting roughly 18 acres. **Table 4-2** provides a list of the full acquisitions. METRO is constantly finetuning the number of acquisitions planned and will make the final determinations regarding property needs and acquisitions during the final design phase of the Project.

5 Environmental Commitments

To avoid impacting adjacent property, METRO designed the Project to be primarily located within existing ROW, or on vacant or undeveloped parcels. Reducing the cross-section by eliminating sidewalks, bike lanes, and shared-use paths in the study area could also mitigate property impacts, but this approach would not meet the Purpose and Need for the Project because it would not improve intermodal connections, coordinate with existing mobility choices across all modes, enhance connectivity, or be consistent with local land use plans. The efforts METRO employed to avoid or minimize potential impacts are further described below.

The contents of the configuration of the Project, including the transitway, roadway lanes, tree and landscape zones, bicycle and pedestrian facilities, egress requirements, and safety buffers/barriers vary by location throughout the study area based on the needs and available ROW of each segment. In areas with constrained ROW, METRO reduced the ROW width of the proposed transitway to limit property impacts and acquisitions where possible. METRO utilized the following general measures to avoid or minimize property impacts in locations of constrained ROW:

- The Project includes separate bicycle and pedestrian facilities wherever possible, except for constrained ROW locations. In the constrained ROW areas, METRO used shared-use paths, rather than separate bike lanes and sidewalks, to reduce the footprint by 5 feet in each location.
- METRO eliminated tree and furniture/ landscaping zones in the design, between the bike lanes and sidewalk or between the roadway and shared-use paths, in areas where the ROW is constrained ROW locations to reduce the footprint of the Project by 5 feet to 7 feet. METRO will maintain the tree and furniture zones wherever possible to provide shade, except where they would result in significant impacts.
- METRO reduced setbacks, or the distance between the property line and the Project ROW, by 1 foot in locations of constrained ROW, rather than the standard 2 feet.

Ten businesses and 15 residences located on 22 parcels would be displaced by the Project. The current use for most of these sites is commercial parking and the potential to relocate the displaced businesses within the study area is low since most of the vacant parcels in the study area are slated for new development. Similarly, potential for relocating restaurant and other retail sites in the study area is also low. However, relocation may still be possible for these uses through the redevelopment of an existing site or by incorporating them into a larger development.

METRO will coordinate with individual property owners to mitigate property acquisitions and displacements. METRO is considering several options to limit impacts including, but not limited to, phasing acquisition and relocation activities, providing relocation consulting services, extending the timeframe for relocation activities, and expanding the replacement area to include other nearby cities. Property acquisition activities would occur in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 and the State of Texas Landowner's Bill of Rights, and other laws that establish the process through which METRO may acquire real property through a negotiated purchase or through condemnation. The Uniform Act provides important protections and assistance for people affected by federally funded projects. Congress enacted the Uniform Act to ensure that people whose real property is acquired, or who move as a result of projects receiving federal funds, are treated fairly and equitably and receive just compensation for, and assistance in moving from, the property they occupy. The Landowner's Bill of Rights applies to any attempt to condemn property in the State of Texas through eminent domain. Eminent domain is the legal authority certain governmental and private entities have to condemn private property for public use in exchange for adequate compensation.

For short-term construction uses, METRO will work with potentially affected property owners, resulting in formal agreements to temporarily use land. METRO will restore properties affected by Project-related temporary land uses and restore owner access to such properties at the end of construction in accordance with individual agreements.

APPENDIX C-2 – Historic Resources Survey and Section 106 Historic Resources Survey Addendum

METRORapid University BRT Corridor

Historic Resources Survey

Final Technical Report
May 2023

METRO NEXT

Abstract

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Bus Rapid Transit (BRT) Corridor Project (the "Project") in Harris County, Texas in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process, with the FTA as the Federal Lead Agency and METRO as the Local Project Sponsor responsible for implementing the Project under NEPA.

FTA is a federal agency, and as such Section 106 (36 Code of Federal Regulations [CFR] Part 800) of the National Historic Preservation Act (NHPA) of 1966, as amended, applies to the Project. In addition, METRO is considered a political subdivision of the State of Texas, therefore, the Antiquities Code of Texas (ACT; Texas Natural Resources Code [TNRC], Title 9, Chapter 191) and its associated regulations (Texas Administrations Code [TAC] Title 13, Part 2, Chapter 26) also apply to the Project. METRO plans to use both local and federal funds to construct the Project. In 2019, residents of METRO's service area voted in favor of a $3.5 million bond that will provide the local funds for METRO's METRONext: Moving Forward Plan, including the Project.

AmaTerra Environmental, Inc. historians, meeting the Secretary of Interior Professional Standards, performed historic structure surveys in 2022 and 2023 to document historic-age resources within the area of potential effect (APE) of the proposed Project. Historians identified two NRHP-listed resources and recommended 12 resources and one historic district as eligible for listing in the National Register of Historic Places (NRHP). Based on the Project definition, historians recommended no adverse effect to the NRHP-listed or recommended NRHP-eligible resources.

Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

1.1 Purpose of Report

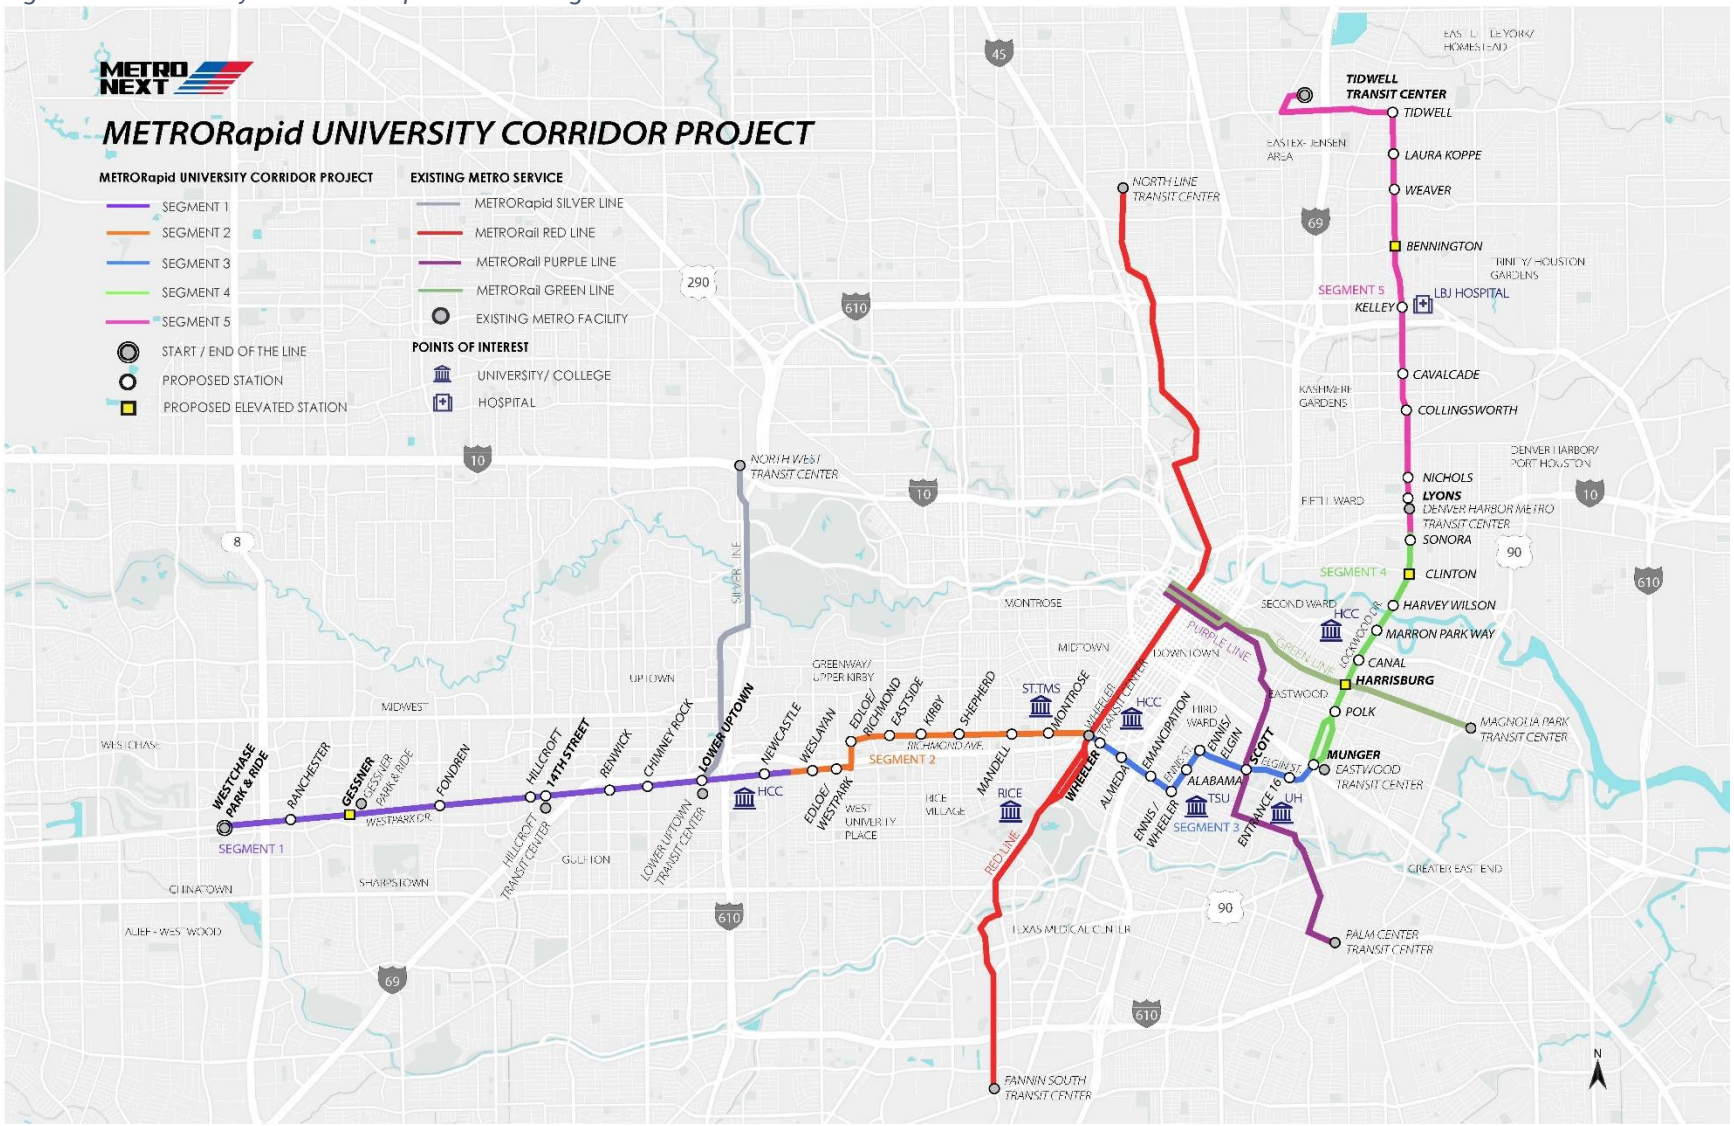
The purpose of the Historic Resources Survey Report (HRSR) is to provide compliance with NEPA, Section 106 of the National Historic Preservation Act (NHPA), and the Antiquities Code of Texas (ACT) by identifying historic-age resources eligible for inclusion in the National Register of Historic Places (NRHP) within the Project area of potential effect (APE) and determining how the Project may impact those resources.

1.2 Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States (US).

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 0-1. Figure 0-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.

The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other METRORail, METRORapid, and local bus services. Some stations would be incorporated into existing METRO facilities. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.



METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 9:30 PM to 12:30 AM. Weekend service

would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

5	Lockwood Dr at I-10 (Fifth Ward/Denver Harbor Transit Center)	Tidwell Transit Center

Figure 0-1 University Corridor Proposed BRT Alignment.

Regulatory Setting

FTA is a federal agency, and as such Section 106 (36 Code of Federal Regulations [CFR] Part 800) of the National Historic Preservation Act (NHPA) applies to the Project. METRO is considered a political subdivision of the state of Texas; therefore, the Antiquities Code of Texas (ACT), Texas Natural Resources Code, Title 9, Chapter 191 and its associated regulations (13 Texas Administrative Code [(TAC] 26) also apply to the Project. The City of Houston has a Historic Preservation Ordinance (Chapter 33 – Planning and Development, Article VII – Historic Preservation). Alterations to the exterior of a city-designated landmark or resource within a city-designated historic district requires a Certificate of Appropriateness (COA) issued by the Houston Archaeological and Historic Commission (HAHC).

METRO plans to use both local and federal funds to construct the University BRT Project. In 2019, residents of METRO's service area voted in favor of a $3.5 billion bond that will provide the local funds for METRO's METRONext: Moving Forward Plan (METRONext), including the University BRT Corridor.

Methodology

1.3 Previously Recorded Historic-Age Resources

Prior to conducting a field survey, historians conducted a desktop survey to identify previously recorded historic-age resources. Historians searched the Texas Historical Commission's (THC) Historic Sites Atlas and survey files (THC no date [n.d.]), the Texas Department of Transportation (TxDOT) Historic Resources of Texas Aggregator database (TxDOT n.d.), and the City of Houston Historic Districts and Landmarks database (COH Landmarks n.d.). Research focused on the identification of properties listed in the National Register of Historic Places (NRHP), National Historic Landmarks (NHL), Recorded Texas Historic Landmarks (RTHL), non-archeological State Antiquities Landmarks (SAL), previously surveyed properties eligible for listing in the NRHP, locally designated Houston Historic Landmarks and Historic Districts, and cemeteries. Official Texas Historical Markers (OTHM) were included in the search, although these subject markers by themselves are not indicative of a designated historic property. Neighborhood surveys appeared on the THC Atlas but were not singled out for identification.

Historians identified and reviewed the following historic resource surveys and reports that intersected with the first three segments of the Project corridor. The surveys included the *Reconnaissance Standing Structures Survey North Corridor Houston, Texas Supplemental Report and Findings* (Moss 2004); *Historic Resources Survey Report University Corridor Project Metropolitan Transit Authority of Harris County, Texas* (Hicks & Company 2007); the *Intensive Survey of Historic-Age Resources Metro Intermodal Terminal APE and Area North of Interstate Highway (IH) 10*, Houston, Harris County, Texas (Emery and Dobson-Brown 2007); the *African American Heritage of Third Ward Houston, Texas,* NRHP Multiple Property Listing nomination (Randall and Korfmacher 2008); the *North Houston Highway Improvement Project (NHHIP) HRSR* (Mitchell and Pettis 2019); and a desktop constraints

letter (Korfmacher 2021). No previous historic resource surveys were identified for Segments 4 and 5 during the literature review.

The *Historic Resources Survey Report University Corridor Project Metropolitan Transit Authority of Harris County, Texas* (Hicks & Company 2007) documented Segments 1, 2, and 3 with a historic-age date of 1963. Therefore, resources dating beyond 1964 and later were not documented during the 2007 historic resources survey. Exceptions to the 1963 historic-age date were made at the Richmond Avenue Modern Metropolitan Historic District. No explanation was provided in the 2007 survey for the deviation from the 1963 historic-age date. Because of the 2007 survey, THC determined a windshield survey would be completed for Segments 1, 2, and 3 using a historic-age date range from 1964 to 1978.

1.4 Literature Review

Existing reports, records, maps, and aerial photographs were examined. Information collected during the records research was obtained from sources including, but not limited to, City of Houston website, City of Houston Planning and Community Development, City of Houston Preservation Office records, Harris County Appraisal District (HCAD), Harris County Clerk, Handbook of Texas online, online newspaper databases, and general interest websites. The bibliography section provides a list of resources cited and reviewed.

1.5 Area of Potential Effect (APE) Coordination with THC

In consultation with THC, the area of potential effect (APE) for the Historic Resources Survey was set for each segment (THC 2022, Tracking #202210364). At the time of the APE coordination with THC, the Project design was at 10 percent. For all segments, the APE was a 150-ft radius from a center point for all the proposed bus stops.

Since Segments 1, 2, and 3 were previously surveyed and coordinated with THC in 2007, the THC requested windshield surveys for these three segments using a historic-age date range from 1963 to 1977. For Segment 1 a 150-ft APE from the current center line was used and only the south side of the route was surveyed as Segment 1 would be constructed in the abandoned Southern Pacific Railroad ROW and construction would occur south of the Westpark Tollway. For Segment 2, THC concurred with the APE as the footprint of the proposed alignment. Historians used a 100-ft APE from the current center line for proposed ROW during the survey to ensure historic-age resources with proposed ROW were documented. The THC requested a re-evaluation of the NRHP eligible Richmond Avenue Modern Metropolitan Commercial Historic District to determine its current eligibility status. For Segment 3, the THC concurred the APE were parcels with proposed ROW. Historians surveyed resources within a 100-ft APE from the current center line where new ROW was proposed for acquisition to ensure historic-age resources were documented.

Since no previous historic resource surveys were identified for Segments 4 and 5, the THC requested reconnaissance level surveys for these two segments using a historic-age date of 1978, and an APE of 100-ft from the center line where new ROW was required. For Segment 5, a 600-ft radius from a center point was used for the proposed new location of the Fifth Ward/Denver Harbor Transit Center.

1.6 Field Survey Methodology

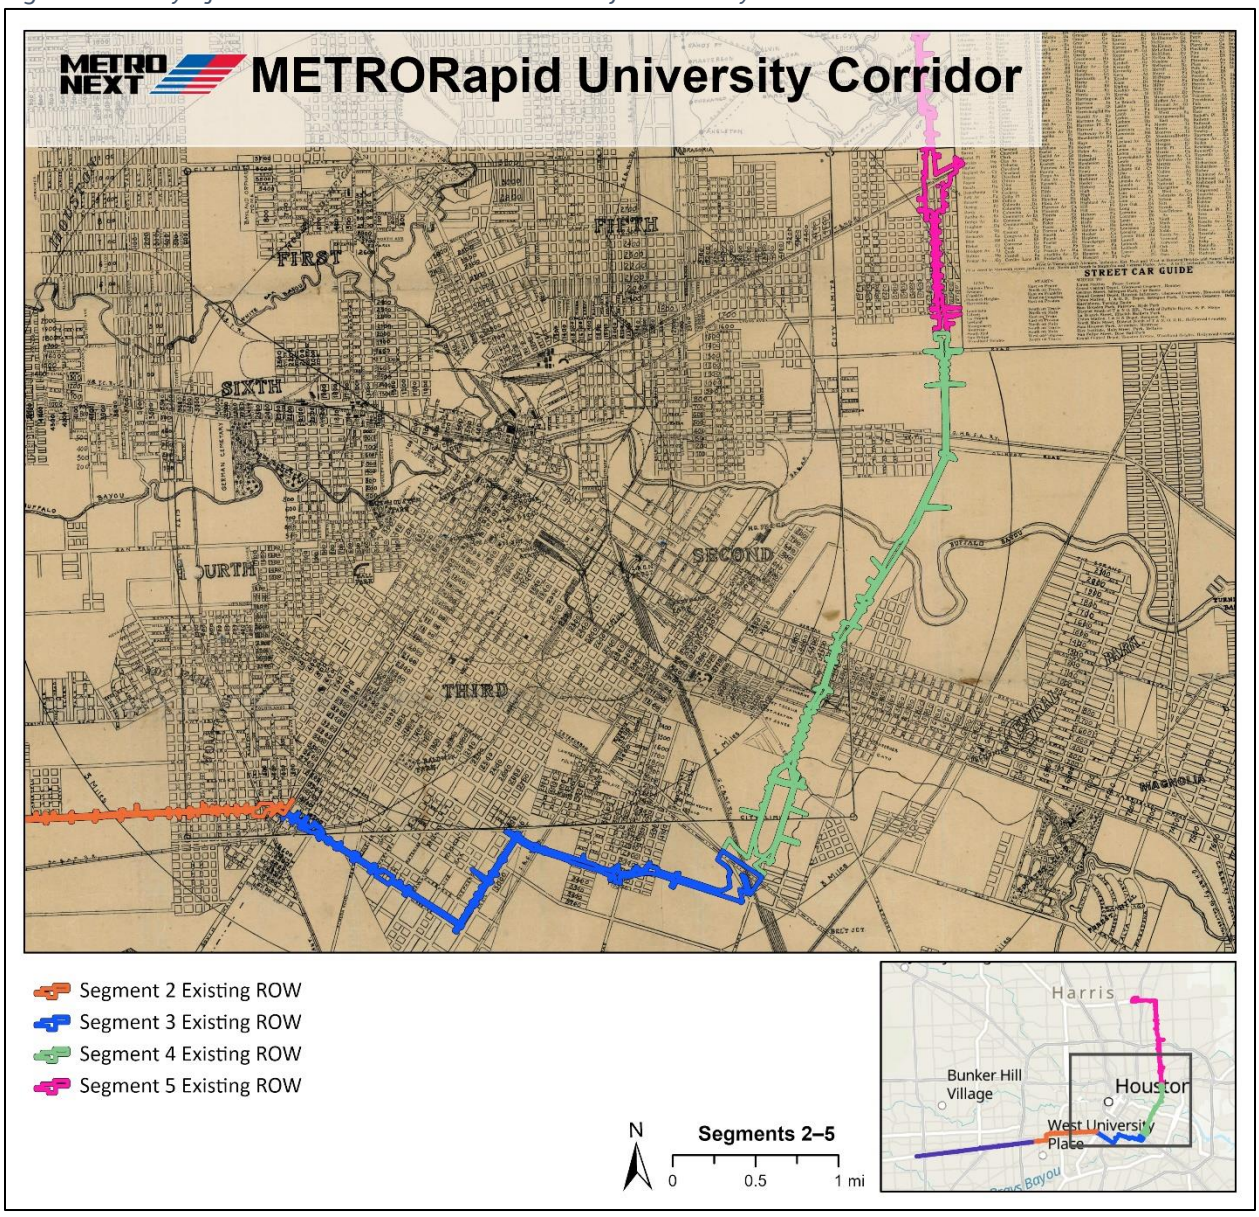
Fieldwork was conducted by architectural historians meeting the Secretary of the Interior's professional qualifications (as defined in 36 CFR Part 61). Onsite surveys were conducted during June 2022 (windshield surveys for Segments 1 and 2), July and August 2022 (reconnaissance surveys for Segments 4 and 5), and January 2023 (windshield survey for Segment 3). Physical inspection of a historic-age resource consisted of a site inspection, photography, and documentation of relevant information such as style, construction date, and modifications to the property. All information was recorded on field notes and maps. Once the information was gathered, analysis of the integrity and significance of each resource was conducted to determine whether individual resources are eligible for listing in the NRHP or whether they contribute to the significance of a NRHP eligible historic district. Resources were given unique identification numbers that identified the segment and resource, and these were keyed to a resource location map, table, and property data sheet, which are in **Appendices A-E**.

1.7 ROW Acquisition and Design Changes

Field surveys were conducted at 10 percent Project design with a large amount of proposed ROW acquisition. The survey result maps shown in the Appendices may differ from the effect figures as the survey result maps reflect the 10 percent design ROW acquisitions while the effect figures reflect the 30 percent design ROW acquisitions. Section 7 – Effects provides an effective date for the proposed ROW acquisition to denote the 30 percent design. At the time the report was originally written, February 2023, the design plans included an overpass of Lockwood Road over the railroad tracks. Community concerns expressed by the Eastwood Civic Association and nearby residents asked for a design change from an overpass to an underpass at this location. This change has been made and is included in the effects assessment in **Section 7**.

Historic Overview

1.8 Settlement and Development (1837 – 1945)



The town of Houston was surveyed, then mapped in a gridiron plan and incorporated in 1837 (McComb 2022). Houston established four wards, all centered on a point in downtown (see **Figure 0-1**). Agriculture was a major economic contributor to Houston's early economy, and settlers migrated from the south to Houston.

Slavery was practiced in and around Houston during its early years. After the Civil War, Houston experienced population growth with former slaves moving to the city for job opportunities. A concentration of emancipated African Americans settled in the Third Ward, establishing schools, churches, businesses, and Emancipation Park. A Jewish community built a synagogue around Hamilton and Cleburne Streets in the 1850s in the Third Ward (Randall and Korfmacher 2008: E-4). By 1872, influential African Americans raised funds and purchased four acres of land to establish the first-ever park for African Americans in Houston, Emancipation Park, in the Third Ward outside of the Project APE (Texas Happens n.d.). The African American population tripled between 1910 and 1930, from 22,929 to 66,357. During this time Dowling Street became the main commercial corridor owned

and patroned by the African American community (Texas Happens n.d.). Dowling Street was renamed Emancipation Avenue.

The population between Buffalo Bayou and White Oak Bayou became large enough to warrant government representation; thus, the Fifth Ward was created partly from the First and Second Wards in 1866. The rail yard and abutting industries, dependent on rail transportation, were the economic center for jobs in this part of town. In 1870 the Fifth Ward was the only Ward with a greater African American population than white population, albeit by a slim margin of 578 to 461 (Pando 2011: 34). The Ward system was discontinued in the early 1900s, but socio-economic associations with those areas are still recognizable and referenced today.

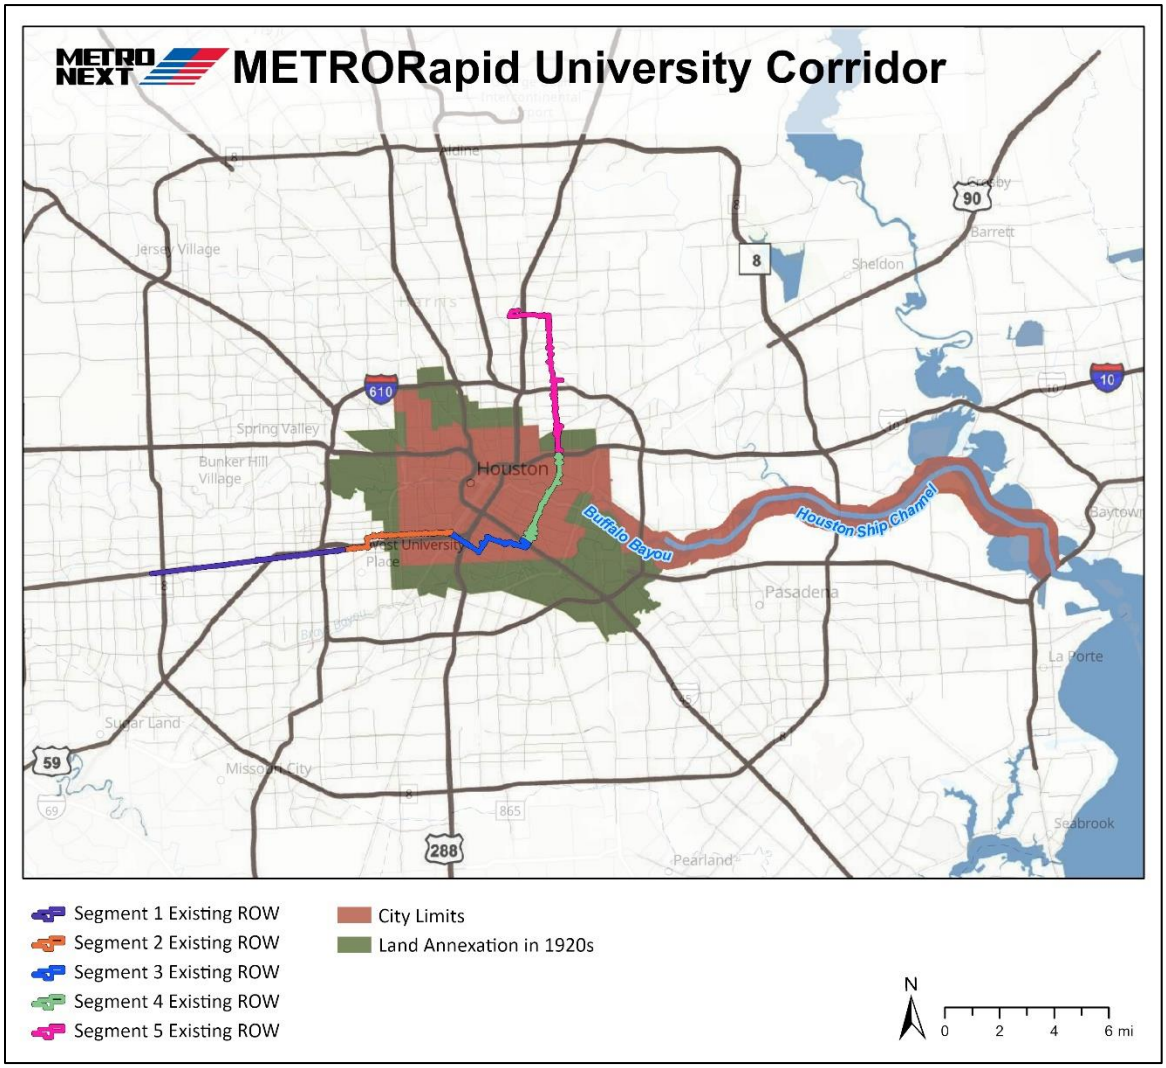


Figure 0-1. City of Houston Wards in 1913 with Project Overlay

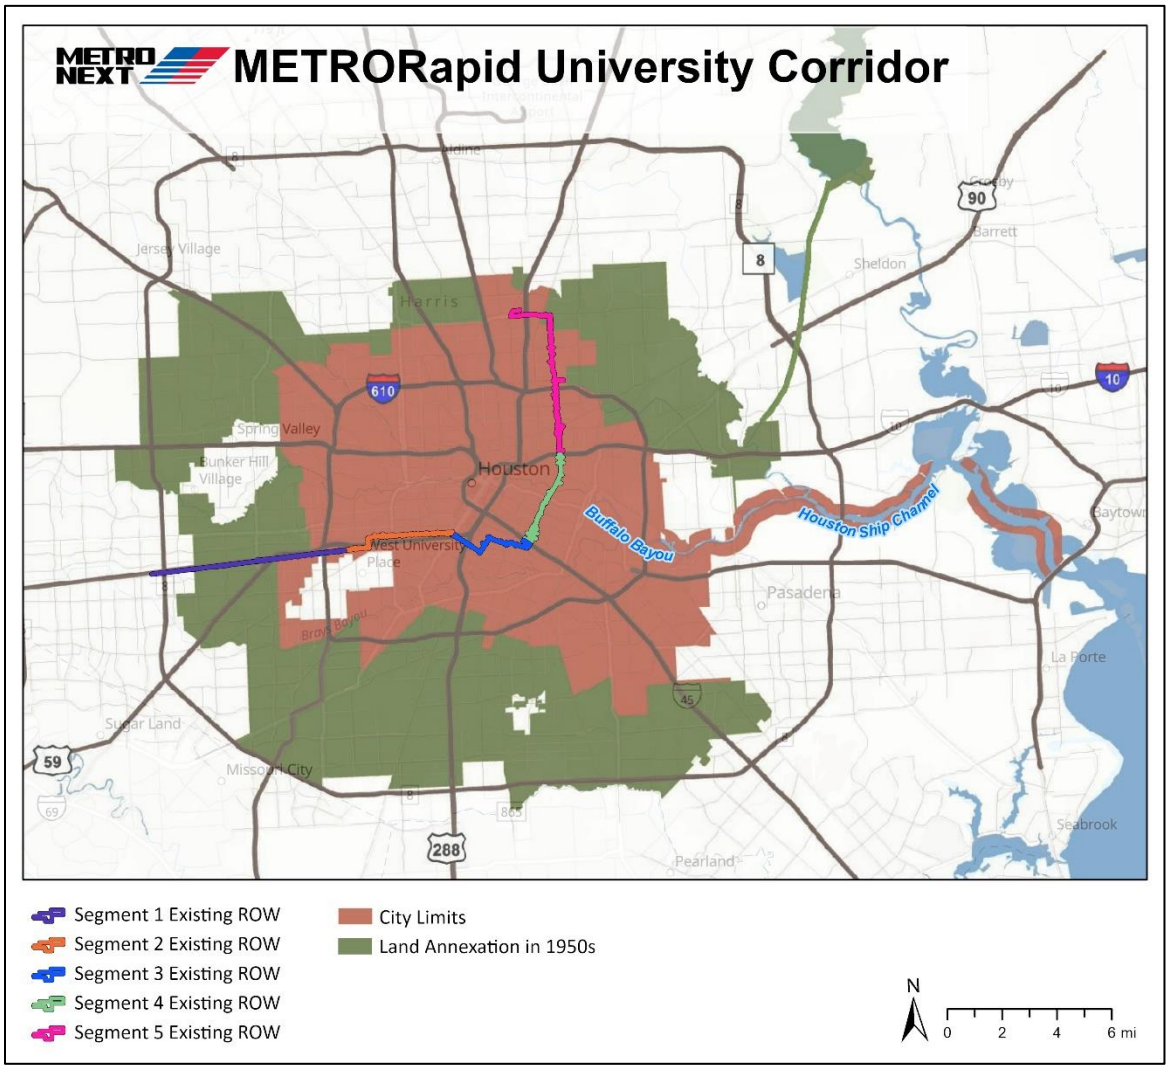
Source: Wikipedia n.d. map 1913, AmaTerra 2023.

By 1900 Houston was nine square miles with a population of 40,000. Discovery of oil at Spindletop near Beaumont in 1901, in conjunction with the Buffalo Bayou Ship Channel's access to the Gulf of Mexico, made Houston an obvious choice for oil companies to locate their business. Mexican citizens migrated to Houston in the early 1900s seeking work at the railroads and ship channel. These immigrants primarily settled in the Second Ward or El Segundo Barrio (Rosales 1981: 224). In 1913 the City of Houston annexed land adjacent to the center core and along both sides of Buffalo Bayou (Houston Ship Channel), and the population of Houston almost doubled to 77,000 (COH Annexations n.d.). In 1920 the city covered 39 square miles (Kaplan 1981: 180). The demand for oil during World War I kept the economy growing. Annexation, economic growth, and an increase in population continued through the 1920s (see **Figure 0-2**). The Third Ward saw another influx of Jewish immigrants in the 1920s, and another synagogue was constructed to meet the growing community (Randall and Korfmacher 2008: 4-E).

Figure 0-2. City of Houston Annexation Map Showing 1920s Land Annexation in Green.

Source: COH Annexation 2019



Starting in 1930 the City of Houston attempted to implement zoning regulations to guide the development and growth of the city. The effort failed. Houston recovered from the Great Depression by 1935 because of its industries and distribution capabilities, setting several records that year in export tonnage, telephone connections, and building activities (Emery et. al. 2009: 8-67). With improvements to the Houston Ship Channel, increasing depth and width the entire length, the Chamber of Commerce began an intensive campaign to draw new businesses to the city (Emery et. al. 2009: 8-67). The concentration of oil-related companies in Houston and distribution capabilities via the Houston Ship Channel ensured that Houston and its citizens continued to prosper during World War II (WWII).

1.9 Economic Boom (1945-1980)

Between 1940 and 1960, the City of Houston doubled its size twice through land annexation, reaching 350 square miles and almost one million residents (see **Figure 0-3**). Many buildings, both commercial and residential, were constructed during this time. The lack of zoning allowed property owners to develop the land with any use, creating a mix of commercial uses directly adjacent to residential uses. Kashmere Gardens in Segment 5 was annexed during this time (COH annexations n.d.). Houston's oil and shipping industries kept the city's overall economy strong. Growth and development were so rampant that the city placed a moratorium on development in many parts of Houston due to insufficient sewage treatment capacity (Fox 1985: 14). The growth lasted until oil prices started to fall in the early 1980s.

After World War II, there was a large shift of population moving from the downtown environs to the suburbs. A specific example of this occurred in the Third Ward. The Jewish population stayed within the inner-city area until the 1950s, when suburban development promised larger lots to build upon, and they relocated to be near new synagogues. As they began to move out, a large portion of the growing middle class African American population relocated from the Fourth Ward into the formerly Jewish neighborhoods of the Third Ward. This changed the Third Ward demographics from a mixture of ethnic groups to a predominance of African American residents (Randall and Korfmacher 2008: E-16). The gradual depopulation of vital neighborhoods had a negative impact on the built environment, with a lack of commercial investment and decline in local area employment as industry and retailers left.

Figure 0-3. City of Houston annexation map showing 1950s land annexation in green.

Source: COH Annexation 2019

1.10 Civil Rights Movement (1948-1970)

Upon returning home from World War II, financial assistance from the GI Bill (the Servicemen's Readjustment Act of 1944) afforded African Americans and Mexican Americans new opportunities for education and home ownership. However, they continued to encounter discrimination, and the League of United Latin American Citizens Council 60 of Houston (LULAC) became assertive in demanding equality (Rosales 1981: 244). After World War II, three landmark court cases helped moved the nation towards desegregation. The 1948 Supreme Court decision for Shelley v. Kraemer allowed non-Caucasian people to rent or purchase property previously denied to them due to restrictive covenants. In 1950 Sweat v. Painter helped establish a law department at the historically Black college at Texas Southern University (located in Segment 3) when Heman Sweatt was denied entrance to the University of Texas Law School. The landmark 1954 Brown v. Board of Education decision ruled that segregated schools were unconstitutional. In 1964, Congress passed the Civil Rights Act, prohibiting discrimination based on race, color, religion, sex, or national origin.

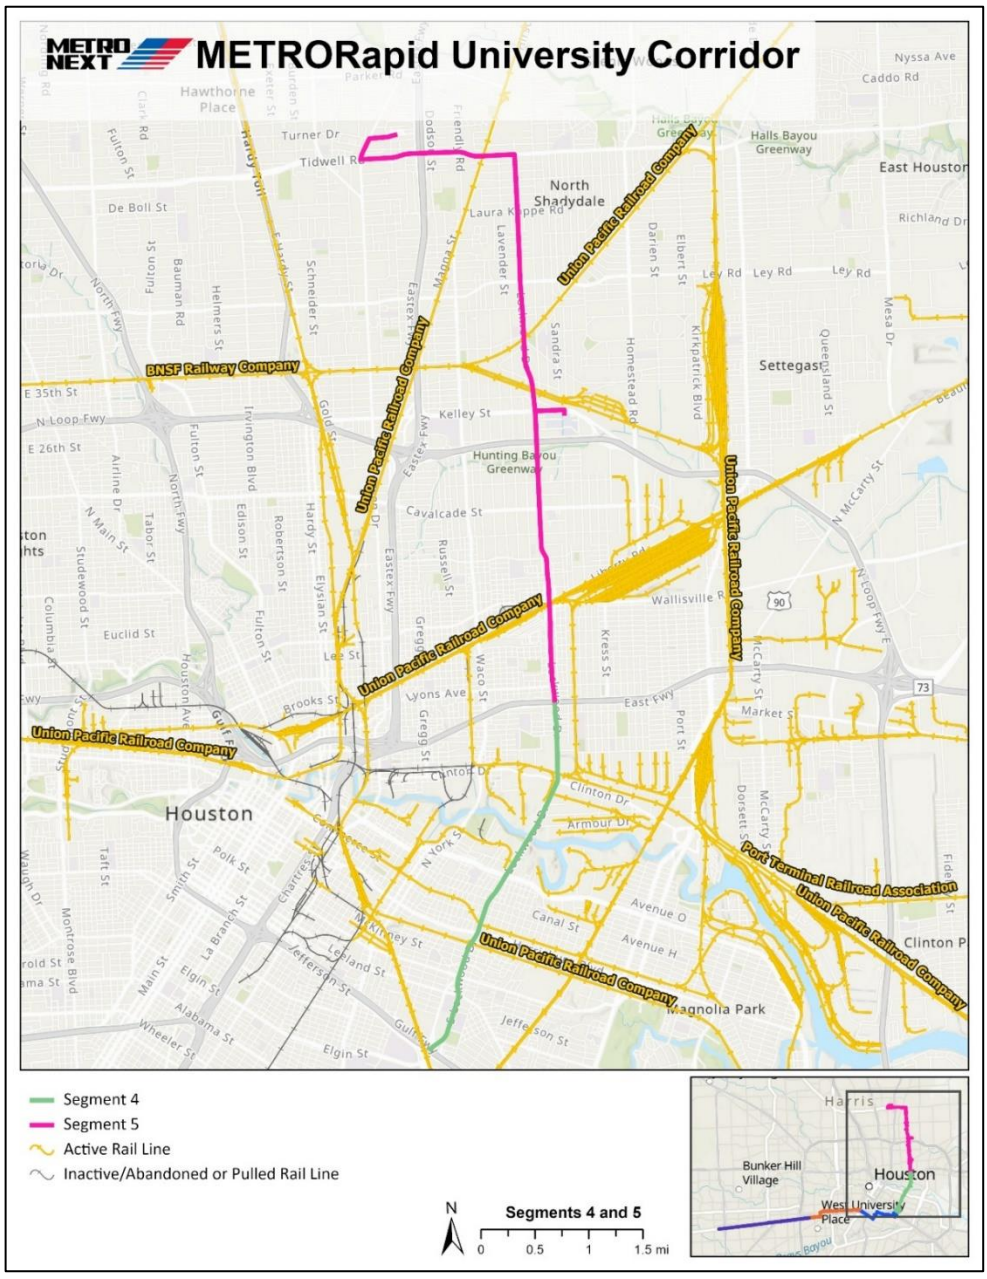
These Supreme Court decisions and federal laws did not mean automatic integration. However, with the booming economy after World War II and throughout the 1970s, African American people had more opportunities for education, work, and living options. This era also saw Houston's white population move to suburbs further from the city's downtown, as evidenced by the changing demographics of the Kashmere Gardens neighborhood (Segment 5) and the Jewish community leaving the Third Ward (Segment 3) for the suburbs.

The Fifth Ward flourished during the 1950s, with Lyons Avenue and Jensen Drive as primary commercial strips. "Over the next three decades the demographics of the neighborhood changed substantially. Specifically, in 1950, 83% of the population was white. Just ten years later, in 1960, the neighborhood had a majority Black population, at 71%. This history propelled Kashmere Gardens residents to lead the Houston fight to integrate public schools during the civil rights era." (COH KGCCAP 2020: 9). Houston Independent School District (HISD) did not automatically integrate their schools after the 1954 US Supreme Court decision ruled segregated schools unconstitutional (Brown v. Board). It took local lawsuits for the first Black student to attend an all-White school, Kashmere Garden Elementary, in 1960 (Houston Chronicle 1960). As middle-class families left to integrate into the suburbs and shop at regional malls, the Fifth Ward business district slowly died, leaving empty buildings and eventually leading to vacant lots (Pando 2011: 37).

1.11 Transportation (1874-1978)

1.11.1 Ship Channel

Brothers John and Augustus Allen choose the town site of Houston because of the water transportation potential of Buffalo Bayou (Sibley 2023). The bayou provided access for steamboats and smaller craft to travel from inland to the Gulf of Texas to transport people and agricultural goods. The Port of Houston was established in 1842 and officially took over maintenance and improvements of the channel. Houston merchants created the Buffalo Bayou Ship Channel Company to improve the channel and bypass Galveston Harbor. Success for the company did not occur until ship and railroad magnate Charles Morgan purchased it and dredged a channel from Clinton, Texas, to Galveston Bay in 1876 (Sibley 2023). Improvements continued in 1909 when Harris County created a navigation district to sell bonds and receive matching funds from the US government (Sibley 2023).



The combination of access by ocean-going vessels and the growing oil industry brought development to the waterfront, and by 1930, nine oil refineries operated along the channel (Sibley 2023). The Houston Ship Channel is not in the Project area, but the railroad system and location of industries in the Project area are connected to the waterway transportation network, and these influence the location and type of buildings in the Project area.

1.11.2 Railroads

With access to the Gulf of Mexico via Houston's ship channel, railroad companies established routes through Houston starting with the Buffalo Bayou, Brazos & Colorado (BBB&C) in 1851 (Willits, W.E. 2007: 2). With the shipping canal enlarged, the Houston Chamber of Commerce adopted the slogan of "Where 17 Railroads Meet the Sea" in the 1920s (Willits, W.E. 2007: 2). Industrial businesses located near the railroads flourished by taking advantage of this transportation option. Over time,

rail companies consolidated routes and abandoned lines as vehicle ownership and air travel reduced the need for rail service. Only six railroad lines operated in Houston by 1980 (HSSHP n.d.). Today, UPRR active rail lines and spurs still serve industry in the Project area, as shown by the map below in portions of Segments 4 and 5 (see **Figure 0-4**).

Figure 0-4. Map of Rail Lines and Rail Spurs in Segments 4 and 5.

Source: TxDOT Texas Railroads n.d., AmaTerra 2023.

1.11.3 Streetcars

Houston City Street Railway company is credited with the successful use of streetcars in Houston in 1874 (Baron 2014: 68). Their initial four lines were longer than the first streetcar routes built by other companies with one line extending to the old fairgrounds on the south end of town, a mile from downtown. Out-of-state investors purchased the rail system in 1890 and converted the mule-drawn system into an electric operation (Baron 2014: 70). Seven additional electric lines were added in the next two years, spurring construction of buildings along the route (Baron 2014: 70, 71).

When the ship channel was deepened in 1908, the streetcar service to Harrisburg Boulevard commenced, providing easy access to six miles of undeveloped land (Baron 2014: 77). The William A. Wilson Company stated in their advertisement that the Eastwood subdivision (Segment 4) could easily be reached by the Harrisburg Line (Wilson Company 1911: 9, 10). Construction of new lines in 1913 and 1914 extended to the Third Ward and Fifth Ward, including the Lyons Avenue line (Baron 2014: 79, 80). In 1927, there were 24 routes utilizing 90 miles of track (Baron 2014: 86). Increased ownership of vehicles, competition from jitneys (private vehicles used as taxis), and bus service added to the demise of the streetcar. The last streetcar discontinued service in 1940.

1.11.4 Roadways

As a railroad and sea hub, roadways have always been integral for the movement of goods through the city. Houston had 26 miles of pavement in 1903 and 196 miles of paved streets in 1915 (Papademeteriou 1983: 115). Houston's Mayor Oscar Holcombe hired the firm of Hare and Hare in 1924 to prepare a major street and thoroughfare plan (Fox 1985: 13), but the plan was not implemented. In 1940, the city created the Department of City Planning and hired Ralph S. Ellifirt, a landscape architect formerly employed by Hare and Hare (Fox 1985: 14). During his time, Ellifirt created a freeway network system, the Thoroughfare Plan of 1943, that became the building block of development in Houston. State funds financed Houston's first limited access highway, the Gulf Freeway, and construction was completed by the end of the 1950s. In 1956 the U.S. Interstate Highway Act was passed, with the goal to connect major towns and ports for movement of troops and goods during times of war. Houston received $453 million in highway funds, over half of the entire Federal appropriation for Texas (Emery et. al. 2009: Sec 8 Pg 70).

Formal plans to construct a "defense loop" around Houston started in the 1940s and resulted in today's Loop 610, which crosses east/west over Lockwood Road in Segment 5. Construction of IH 45 and US 59 in the mid-twentieth century divided established ethnic neighborhoods and demolished many buildings in the Third, Fourth, and Fifth wards (Randall and Korfmacher 2008: Sec E Pg 11). A specific example of the loss of housing stock due to freeway construction is evident in Segment 5 in the Parkwood Addition located at Lockwood and the East Freeway (IH 10), as one block of this small three-block subdivision was demolished.

National Register of Historic Places Evaluation Criteria

To be considered for listing in the NRHP, buildings, structures, objects, sites, and districts must meet standards of historic significance defined by the Keeper of the National Register (36 CFR 60). Each property must be evaluated within the framework of its historic context, and it must retain characteristics that make it a good representative of properties associated with that aspect of the past. The NRHP Criteria for Evaluation state that:

The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, setting, design, materials, workmanship, feeling, and association, and:

A. Are associated with events that have made a significant contribution to the broad patterns of our history; or

B. Are associated with the lives of persons significant in our past; or

C. Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. Have yielded or may be likely to yield information important in prehistory or history (Shrimpton, 2002).

1.11.5 Criterion A

A resource that is representative of an important trend or event may be eligible for the NRHP under Criterion A. This broad definition provides flexibility when determining the kinds of significant historical associations. However, a property is not eligible for inclusion in the NRHP simply because it was built during an important era in history or if it simply fulfilled its historic role. For a property to be eligible under Criterion A, it must be significantly associated under one or more defined historic context(s), convey a sense of the past, and remain recognizable to the period in which it was first constructed or achieved significance.

1.11.6 Criterion B

Criterion B applies to properties associated with individuals whose specific contributions to history can be identified and documented. However, it is important to determine not only what contributions are associated with the individual and how they compare with those of other persons, but also how the property represents or is linked to that individual and his or her accomplishments. The extent and duration of that association is particularly important for determining NRHP eligibility. Moreover, the significance of that person must be associated with defined contextual themes. Properties significant under NRHP Criterion B should be those most closely associated with a person who has made important contributions to the past, be associated with the person during the time he or she achieved significance, convey a strong sense of the past and remain recognizable to the period in which the person achieved significance.

1.11.7 Criterion C

Properties eligible for the NRHP under Criterion C derive significance from the physical qualities of their design, construction, and/or craftsmanship, including such disciplines as architecture, landscape architecture, engineering, and art. To be eligible under Criterion C, a property must embody distinctive characteristics of a type, period, or method of construction; represent the work of a master; possess high artistic value; or represent a significant and distinguishable entity whose components may lack individual distinction (i.e., a historic district). A property significant under Criterion C is one that clearly represents a noteworthy example of a defined property type, dates from the period of significance of one or more historic context(s) and exhibits the character-defining features of its property type. Therefore, a property must retain a high degree of physical integrity, as well as having significance in the historic context.

1.11.8 Criterion D

Criterion D is applied most often to archeological resources, but it also may be used to evaluate the significance of extant buildings and structures. Properties significant under this Criterion are those that have the ability to yield important historic information, such as a rare type of construction. For these types of properties to be eligible under Criterion D, they must themselves be, or must have been, the principal source of important information, such as how construction expertise affected the evolution of local building development. Due to the nature of the reconnaissance level survey, evaluation under Criterion D is generally excluded unless historians feel a particular property warrants additional investigation or consideration by an archeological professional.

1.11.9 Criteria Considerations

On occasion, certain types of resources are also evaluated that are not normally considered eligible for the NRHP. These resources include religious properties, structures moved from original locations, birthplaces and graves, cemeteries, reconstructed buildings, commemorative properties, and properties achieving significance within the last fifty years. These properties can qualify for inclusion in the NRHP if they meet specific Criteria Considerations listed below, in addition to meeting the regular requirements:

A. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or

B. A building or structure removed from its original location, but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or

C. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or

D. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or

E. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or

F. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or

G. A property achieving significance within the past 50 years if it is of exceptional importance.

1.11.10 Seven Aspects of Integrity

In addition to being significant under one or more of the Criteria listed above, an NRHP-eligible property must also retain historic integrity of those features necessary to convey its significance. The Keeper of the National Register has identified and defined seven aspects of integrity by which potential candidates for the NRHP must be measured:

- *Location* is the place where the historic property was constructed or the place where the historic event occurred.
- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property.
- *Setting* is the physical environment of a historic property.
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- *Workmanship* is the physical evidence of the crafts of a particular culture of people during any given period in history or prehistory.
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event, person, or period and a historic property.

Determining which of these aspects of integrity are most important to a particular property requires knowing why, where, and when the property is significant. For Criteria A or B eligibility, the aspects of *location, feeling, setting*, and *association* take on greater importance in determining a property's integrity. To be eligible under these criteria, a property must be able to clearly convey its significant associations with the historic context. This often requires that a property's overall environment remains relatively unaltered from its period of significance. Properties eligible for the NRHP under Criterion C must retain a high degree of physical integrity, as well as retain some relation to the historic context. The most important aspects of integrity for Criterion C eligibility are *location, design, materials*, *workmanship*, and *feeling*.

At a minimum, a property eligible under Criteria A or B must retain its basic original form that identifies its property type and must be generally recognizable to its period of significance. However,

the significance of properties under Criteria A or B is not derived mainly from their design or construction value. Therefore, a greater amount of alteration to a building's historic physical features is allowable when compared to the more stringent standards set for Criterion C eligibility. Some minor alterations to the physical fabric of the building do not necessarily preclude Criterion C eligibility, although they may result in some loss of integrity. Such acceptable alterations could include replacement of roof materials or replacement of a minority of exterior doors and windows within the original fenestration pattern of the building. In some cases, non-historic outbuildings or landscape features could also be considered acceptable modifications to the property, if they are visually unobtrusive and compatible in design and scale with the original building and its setting. Major changes to a building's roofline, form, or overall massing are generally considered unacceptable, and would render a building not eligible under NRHP Criteria A, B, and C.

Historic Cultural Resource Survey Results

Following National Park Service (NPS) guidelines, the historic-age resources identified within the APE were divided into groups by segment and per function/use. Photo sheets have information for each individual resource. Tables for each segment provide a synopsis of each resource documented in the survey. The photo sheets and tables are in the Appendices.

1.12 Segment 1 Survey Results

Per THC coordination, historians conducted a windshield survey of Segment 1, only on the south side of the route, using a 150-ft APE for the route and a 150-ft APE for the proposed bus stations. Westpark Tollway is a four-lane facility. According to historic aerial photographs, land adjacent to the road was undeveloped or agricultural in 1964. Development along the corridor increased between 1973 and 1981. METRO purchased the Southern Pacific Railroad ROW in 1992, and construction of Westpark Tollway started in 2002.

1.12.1 Segment 1 Historic-Age Resources Surveyed

A total of eight historic-age resources were documented during the survey within the Project APE in Segment 1: three commercial buildings, three domestic complexes (apartments), an industrial facility, and a religious building (see

Table 0-1). All eight resources are recommended not eligible for listing on the NRHP. Survey result maps photo sheets, and a summary table for documented historic-age resources for Segment 1 are in **Appendix A**.

Table 0-1. Segment 1 Historic-Age Resources Recommended Not NRHP Eligible.

Resource	Address	Eligible	Circa Year Built	Style
S1 01	5612 Fondren Rd	No	1969	None
S1 02	5607 Forney Dr	No	1968	New Formalism influence
S1 03	6640 Harwin Dr	No	1971	None
S1 04	5401 Rampart St	No	1977	None
S1 05	5511 Renwick Dr	No	1970/1971/ 1996	None
S1 06	5500 El Camino Del Rey	No	1970	Spanish Colonial Revival influence
S1 07	5302 Chimney Rock Rd	No	1974/2019	Pagoda
S1 08	5401 Chimney Rock Rd	No	1979	None

Source: AmaTerra 2023.

Resources S1 01, S1 02, and S1 07 are all commercial buildings. Resource S1 01 is a one-story commercial building with no notable stylistic influences, constructed circa 1969. The walls feature concrete masonry unit construction, with full-height plate glass picture windows and double glass entry doors on the façade. A projecting flat awning supported by metal posts shades the façade. Alterations include a modern awning, windows, and doors. Resource S1 02 is a one-story commercial warehouse with pebbledash siding and gambrel roofs. Flat roofs project over the windows. The slim floor-to-roof pilasters reflect a New Formalism influence. Alterations include modern windows. Resource S1 07, Pizza Hut, is a one-story restaurant building with stone and fiber cement siding in the Pagoda Roof style. Per HCAD, the building was constructed in 1974 and remodeled in 2019. Alterations include new siding, windows, a door, an entryway, siding, and signage. The three commercial buildings in Segment 1 were all constructed after 1968 and reflect typical stand-alone buildings adjacent to Texas highways. The resources are recommended as not eligible for listing on the NRHP. See **Appendix A** for the survey results map, photo sheets, and tables.

Resource S1 03 *SANATAN SHIV SHAKTI MANDIR* [Hindu] is a one-story building of no particular style with three large domes. The walls are a combination of brick veneer and stucco siding topped with a shed roof. Alterations include a modern roof, modern doors, and siding, plus two additions to the west façade and a gazebo in the east parking lot. The first building was constructed in 1971. Per historic aerials, the domes were added by 2012, the gazebo by 2014, and the addition by 2020. Per the organization's website, they purchased this property in 2008 for Hindu religious rites and ceremonies and as a resource and education center for Hindu heritage and culture. The 1,000 sq ft addition is a Garbha Bruha to seat Hindu Deities and was dedicated in November 2013 (Shivshaktimandir n.d.). The resource is recommended as not eligible for listing on the NRHP. See **Appendix A** for the survey results map, photo sheets, and tables.

Resources S1 04, S1 06, and S1 08 are all apartment complexes. Resource S1 04, Pavilion Place Apartments, was constructed in 1977 and has 52 buildings of no particular style. Per HCAD, the buildings were remodeled in 2012 and 2017. Alterations noted during the survey were modern siding, windows, and roofing, plus a remodel of the leasing office. Resource S1 06, Alora Apartments,

was constructed in 1970 with a Spanish Revival influence indicated by the faux inset arches and stucco siding. Alterations include new siding, windows, and fencing. Resource S1 08, 5401 Chimney Rock Road, is a garden apartment complex with 66 buildings, of which three are clubhouses, constructed in 1979. There are four swimming pools. Most of the buildings are two stories with brick and synthetic siding and gabled roofs. Alterations include new siding and windows. The resources are recommended as not eligible for listing on the NRHP. See **Appendix A** for the survey results map, photo sheets, and tables.

Resource S1 05, Argos Southern Star Concrete, is an industrial processing plant. Access to the parcel was blocked due to a security gate. A one-story concrete block building was located near the entrance. The building did not have any obvious alterations, nor did it appear to have a unique or innovative architectural design. Per HCAD, there are six buildings on the parcel: three metallic warehouses (c. 1971 and 1976), two office buildings (c. 1970), and one warehouse (c. 1970). The resource is recommended as not eligible for listing on the NRHP. See **Appendix A** for the survey results map, photo sheets, and tables.

The surveyed buildings have no known association with important historic trends, events, or persons of historic significance under Criteria A and B. Due to the alterations, the buildings generally lack integrity of design, materials, and workmanship and do not represent good examples of any particularly architectural style or the work of a known architect under Criterion C. The resources are recommended not eligible for the NRHP under Criteria A, B, or C.

1.13 Segment 2 Survey Results

Per THC coordination, historians conducted a windshield survey of Segment 2 using a 100-ft APE for the route and a 150-ft APE for the proposed bus stations. Segment 2 is roughly bounded by Edloe and US HWY 59 traveling through an urban area with a mix of commercial and residential structures. The area between Edloe and Morningside Drive remained undeveloped in 1944. By 1953, residential subdivisions were added west to Wakeforest Avenue. By 1978, development - both residential and commercial - expanded west, beyond the Project limits.

1.13.1 Segment 2 Historic-Age Resources Surveyed

A total of 21 historic-age resources were documented during the survey within the Project APE in Segment 2, of which 10 resources were in the previously-determined NRHP Richmond Avenue Metropolitan Commercial Historic District (2007). Per THC request, historians re-evaluated the historic district and recommended two buildings in the district as no longer contributing, S2 12 and S2 16. Due to the loss of the two contributing buildings, the historic district is recommended as no longer NRHP eligible as the percentage of contributing buildings (eight) to the total number of buildings within the boundaries of the historic district (seventeen) falls below the general 50 percent threshold for district eligibility. The remaining 11 resources, outside of the Richmond Avenue Metropolitan Commercial Historic District, were recommended not eligible for listing on the NRHP. The NRHP eligible building at 1836 Richmond Avenue was not surveyed as it was previously determined eligible, and no ROW was proposed for the parcel.

1.13.2 Segment 2 NRHP Eligible Historic Resources Surveyed

Buildings in the previously determined NRHP-eligible Richmond Avenue Metropolitan Commercial Historic District (2007) abut both sides of Richmond Avenue between Buffalo Speedway and Eastside Street. The Richmond Avenue Metropolitan Commercial Historic District Survey from 2007 originally identified 10 contributing commercial buildings (see **Table 0-2**) out of a total of 17 buildings within the district (Hicks & Company 2007). Historians recommend a loss of integrity for two properties, S12 and S14 and that the district is no longer eligible.

Table 0-2. Segment 2 Historic Resources Recommended NRHP Eligible.

Resource	Address	Contributing to District	NRHP Eligible (2023)	Circa Year Built	Style
N/A[1]	1836 Richmond	N/A	Yes	N/A	N/A
S2 07	3336 Richmond	Yes	Yes	1965	New Formalism
S2 08	3334 Richmond	Yes	Yes	1970	New Formalism
S2 09	3323 Richmond	Yes	Yes	1961	Expressionism
S2 10	3322 Richmond	Yes	Yes	1964	International
S2 11	3311 Richmond	Yes	Yes	1969	New Formalism
S2 12	3131 Richmond	No	No	1959/2011	Modernism
S2 13	3121 Richmond	Yes	Yes	1961	New Formalism
S2 14	3118 Richmond	Yes	No	1965	International
S2 15	3101 Richmond	Yes	Yes	1964	New Formalism
S2 16	3100 Richmond	No	No	1962/2008	New Formalism

[1]Not surveyed, previously determined by others
Source: Hicks & Company 2007, and AmaTerra 2022.

The 2007 survey noted the buildings in Richmond Avenue were surrounded by parking lots, the buildings display regularity of form and advanced technologies of attenuated support columns and cantilevered roofs and floors, and a structural skeleton covered by a thin, non-structural skin. Individually and as a district the buildings demonstrated the concept of the International style with rectangular volumes, hovering planes, and lack of architectural decoration. Even though some of the buildings were less than 50 years old, they contributed to the overall feeling of the district as they followed the broad concepts set by the International style (Hicks & Company 2007: 22).

The previously-determined NRHP-eligible Richmond Avenue Metropolitan Commercial Historic District was surveyed in July 2022 to verify its architectural integrity. Two resources which were previously identified in 2007 as contributing resources are recommended as no longer contributing to the historic district in 2022 (see Table 0-2). Remodeling of Resource S2 16, 3100 Richmond Avenue, has reduced the building's integrity of materials and design. The vertical emphasis of repetitive cladding and windows was replaced by the inclusion of colored horizontal panels sporadically dispersed on the façade. Remodeling of Resource S2 13, 3131 Richmond Avenue, has reduced its integrity of materials and setting. The service station has been remodeled with modern

garage doors and a six-foot metal fence enclosing the front parking lot. Both buildings are recommended noncontributing to the previously-determined eligible NRHP historic district due to loss of integrity of material and design. The remaining eight buildings of the historic district still retain their integrity with seven buildings individually recommended as eligible for listing on the NRHP, S2 07, S2 08, S2 09, S2 10, S2 11, S2 13,and one, S2 15, under Criterion C in the area of Architecture at the local level of significance.

Based on the 2022 survey the district has 17 buildings total, with nine noncontributing and eight contributing. The district no longer retains integrity as more than 50 percent of the buildings are noncontributing. Therefore, the district is recommended as not eligible for listing on the NRHP. See **Appendix B** for the survey results map, photo sheets, and tables. The eight properties previously included in the district remain individually eligible, as does the property previously-recommended eligible at 1836 Richmond.

1.13.3 Segment 2 Historic-Age Resources Surveyed Recommended Not NRHP Eligible

The remaining historic-age resources surveyed in Segment 2 which are recommended as not eligible for the NRHP were related to commerce, except for S2 04, La Quinta Inn, which is categorized as domestic per NPS guidelines (see **Table 0-3)**. Streetscape photos, S2 01, 06, 18, 22, 26, and 27, were numbered sequentially with the historic-age resources to provide a location context. See **Appendix B** for the survey results map, photo sheets, and tables.

Table 0-3. Segment 2 Historic-Age Resources Recommended Not NRHP Eligible.

Resource	Address	Eligible	Circa Year Built	Style
S2 02a/b	4151 Southwest Fwy	No	1971	Spanish Colonial Revival influence
S2 03	4141 Southwest Fwy	No	1973	None
S2 04	4015 Southwest Fwy	No	1968	Spanish Colonial Revival
S2 05	3759 Southwest Fwy	No	1967	None
S2 17	2626 Richmond Ave	No	1973	Modernism
S2 19	3601 Kirby Dr	No	1979	Spanish Colonial Revival influence
S2 20a/b	2536 Richmond Ave	No	1970	None
S2 21	2107 Richmond Ave	No	1972	None
S2 23	2040 Richmond Ave	No	1978	None
S2 24	4215 Mandell St	No	1970	None
S2 25	1419 Richmond Ave	No	1970	None

Source: AmaTerra 2022.

Resources S2 02b and S2 03 are high-rise vertical block office buildings both constructed circa 1971 and 1973 respectively. Resource S2 02b is a multistory, two-part vertical block office tower with orange brick siding. The Spanish Colonial Revival style influence is evidenced by the brick color and the faux arch gallery. The original windows have been replaced. S2 02 has an associated, detached multi-floor parking garage (S2 02a). Resource S2 03 is a six-story vertical block building of no notable

design with stucco siding. The windows create a pattern of vertical stripes on the south and north facades. The resources are recommended as not eligible for listing on the NRHP.

Resource S2 04 is the La Quinta Motor Inn constructed c. 1968 based on HCAD. The motel consists of two buildings; one is an "H" plan centered around a pool while the second is a rectangular plan oriented to IH-69. Both buildings are two-stories with rooms accessed from the exterior. Alterations include changes to the main entrance and modern doors. La Quinta Motor Inns concept by Sam and Philip Barshop started in San Antonio, Texas, constructed for the 1968 World's Fair. The Barshops franchised in 1973 but discontinued licensing in 1977. The motels had 100 to 125 rooms, and buildings were standardized with precast concrete panels, prefabricated bathrooms, and architectural elements of the Spanish style. In 1990 La Quinta modified their signage and underwent renovation and remodeling of their older motels to rebrand the chain (Jakle, Sculle, and Rogers 1996: 205-206). The resource is recommended as not eligible for listing on the NRHP.

Resource S2 05 is a two-story, commercial building of no particular style. Alterations include modern windows, siding, and awnings, plus a roof tower added circa 2002. The resource is recommended as not eligible for listing on the NRHP.

Resource S2 17 is a two-story, commercial building constructed in the Modernism style. The wide marquee wall has been covered with metal siding reducing integrity of material and design. The resource is recommended as not eligible for listing on the NRHP.

Resources S2 19 and S2 20a and b are restaurants. Resource S2 19 is a one-story, gable roofed building in the Spanish Revival style constructed in 1979. Alterations include the side addition, gable roof (c. 2002) and red tiles (c. 2011). The resources are recommended as not eligible for listing on the NRHP.

Resource S2 20a was originally a gas station. The building is one story with a gable roof and brick siding. Alterations include the front façade addition (c. 2004), east façade addition (c. 2005), and a modern metal roof (c. 2012). The detached gas station canopy (S2 20b), built circa 1970, is used for sheltered parking. Resource S2 21 is a one-story building with an office and three service bays for automobiles. Based on aerial photos showing a gable roof and the 1970 year of construction, this was originally a gas station built in the Ranch style. Alterations include a modern metal parapet (c. 1995), a rear fence (c. 2020), and the loss of a canopy. The resource is recommended as not eligible for listing on the NRHP.

Resources S2 23 and S2 24 are one-story metal warehouses with gable roofs constructed circa 1978 and 1970, respectively. A warehouse generally has a large footprint, rolling garage doors, and pedestrian doors. Windows vary based on business needs and use. Roofs are generally flat or gabled. Warehouses are designed for function and not style and are ubiquitous. The resources are recommended as not eligible for listing on the NRHP.

S2 25 is a one-story retail center in a rectangular plan set at the rear of the parking lot. Alterations include modern windows, siding, a canopy, and a change in fenestration. The resource is

recommended as not eligible for listing on the NRHP. See **Appendix B** for the survey results map, photo sheets, and tables.

All the buildings lack integrity of materials, design, and workmanship or do not rise to the level of significance necessary for inclusion in the NRHP. The buildings have no known association with any historically significant events, trends, or persons under Criteria A and B. They suffer from integrity issues and are generally not noteworthy examples of a particular architecture style or known architect under Criterion C. Therefore, they are recommended not eligible under Criteria A, B, and C for listing on the NRHP.

1.14 Segment 3 Survey Results

Segment 3 was initially surveyed in 2007 using a cut-off date of 1963 (Hicks & Company 2007). For Segment 3, resources located in the NRHP eligible Third Ward Historic District were documented with streetscape photographs unless new ROW greater than corner clips for ADA sidewalk and ramp improvements was required. If ROW greater than corner clips for ADA sidewalk and ramp improvements was required, then the resource was individually documented. To reduce new ROW in the NRHP eligible Third Ward Historic District plus address concerns from TSU and UH, design engineers changed the route in the NRHP eligible historic district after APE coordination occurred with THC. The 10 percent design route coordinated with THC would have followed Wheeler Avenue, then north to Emancipation Avenue/Dowling Street, then east to Alabama Street. The new route would use Wheeler Avenue, turn north at Ennis Street, then east at Elgin Street. The new route greatly reduces new ROW required in the historic district except for corner clips at some corners to provide ADA compliance. Streetscape photos were included in the documentation per THC requirements.

At Wheeler and SH 288, Segment 3 enters the Third Ward Historic District and continues through the district until Elgin Avenue, at which point it passes through the University of Houston. A 1944 aerial photograph shows the area developed with residential buildings and the beginnings of the University of Houston campus. Texas Southern University, established in 1927 as the Houston Colored Junior College, moved to a 53-acre parcel in the Third Ward in 1947. Student petitions in 1951 brought about the name change to Texas Southern University (TSU n.d.).

1.14.1 Segment 3 Historic-Age Resources Surveyed

A total of 22 historic-age resources were documented during the survey within the Project APE in Segment 3. There were 16 resources outside of the NRHP-eligible Third Ward Historic District and 6 resources documented inside the historic district boundaries. Streetscape photos (S3 17- S3 23) of the Third Ward Historic District are available in **Appendix C**.

1.14.2 Segment 3 Historic Resources Recommended NRHP Eligible

A total of one NRHP eligible and two NRHP listed buildings and one NRHP eligible historic district were documented in Segment 3. Resource S3 16a, the Albert Sidney Johnston Junior High School building (Young Women's College Preparatory Academy), Resources S3 25a and S3 25b the Houston Negro Hospital and Nursing School at 3402 Ennis, and the Third Ward Historic District.

Resource S3 16a, the Albert Sidney Johnston Junior High School building (Young Women's College Preparatory Academy), was determined NRHP eligible under Criterion C in the area of Architecture at the local level of significance in 2019 (Mitchell and Pettis 2019:181). The building is a good example of an early twentieth century school constructed in the Beaux Arts style and designed by a prominent Texas architectural firm of Sanguinet, Staats, Hedrick, and Gottlieb, with Wm. Ward Watkin as consulting architect.

Alterations include a modern metal canopy supported by concrete columns added in 2017. Although the canopy blocks the view of the front façade it could be easily removed without destroying original materials of the school building and therefore the building is still recommended NRHP eligible under Criterion C, in the area of Architecture at the local level of significance.

The school campus is located west of and outside of the Third Ward Historic District. The campus includes the school building and the baseball field on one parcel bounded by the streets of Cleburne, Chartres, Chenevert, and Wheeler. A service road, parallel to Wheeler Avenue, connects Chenevert and Chartres Streets and bifurcates the campus physically and visually separating the baseball field and a parking lot from the school building. In the 2019 survey by Mitchell and Pettis only the school building was discussed as NRHP eligible with a map provided to identify boundaries (Mitchell and Pettis 2019: 181, 234). The baseball field (S3 16b) is modern, built circa 1995, and does not contribute to the eligibility of the school to convey its architectural significance under Criterion C, nor does the baseball field impact the integrity of the school building as the building only is recommended eligible, and not the campus or the building's physical setting.

The Houston Negro Hospital and Nursing School at 3204 Ennis (S3 25a and S3 25b) are both in the NRHP eligible Third Ward Historic District and individually listed in the NRHP. The Houston Negro Hospital is listed under Criterion A in the area of Ethnic Heritage/Black and Social History. The Nursing School is listed under Criterion A in the area of Ethnic Heritage/Black and Social History and Criterion C in the area of Architecture.

In 2008 and 2019, the THC determined the Third Ward Historic District eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development and eligible under Criterion C in the area of Architecture. At the time of the report, historians do not know why the NRHP nomination did not continue through the designation process.

Table 0-4. Segment 3 Historic Resources Recommended NRHP Eligible.

Resource	Address	Contribute to Historic District	Individually Eligible	Circa Year Built	Style
S3 16a	1906 Cleburne St School	N/A	Yes	1925	Beaux Arts
S3 16b	1906 Cleburne St baseball field	N/A	No	1995	N/A
S3 24	3401 Ennis St Third Ward HD	No	No	1910/2007	None
S3 25a	3204 Ennis St Third Ward HD	Yes	NRHP listed	1926/1952/ 1961	Spanish Colonial Revival
S3 25b	3204 Ennis St Third Ward HD	Yes	NRHP listed	1931	Spanish Colonial Revival
S3 26	2905 Elgin St Third Ward HD	Yes	No	1970	Contemporary
S3 27	3108 Ennis St Third Ward HD	Yes	No	1922	None
S3 28	3115 Ennis St Third Ward HD	Yes	No	1922	None
S3 29	3481 Elgin St Third Ward HD	Yes	No	1961	None

Note: HD: Historic District
Source: AmaTerra 2023.

The Third Ward Historic District along Wheeler Avenue remains intact (**Figure 0-1**). Modern infill development along Ennis Road across from TSU is starting to erode the eastern edge of the historic district (Figure 6-1). A significant number of shotgun style houses identified in the 2008 survey report (Randall and Korfmacher 2008) at the northwest corner of Alabama and Ennis were removed by 2012, and the lot remains vacant today (streetscape photo S5 23). At the windshield level and due to the size of the historic district, no recommendation is being made regarding Criterion C. Based on Criterion A, the Third Ward Historic District is recommended eligible for listing on the NRHP under Criterion A at the local level in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development.

Figure 0-1. Streetscape View of NRHP Eligible Third Ward Historic District with Infill Development.

Note: Looking northwest from intersection of Ennis and Cleburne streets. The detached two-car garage with a second-story apartment and the three-story building are examples of infill development occurring along Ennis Street.

1.14.3 Segment 3 Historic-Age Resources Recommended Not NRHP Eligible

The historic-age resources surveyed in Segment 3 that are recommended as not eligible to the NRHP included three commercial buildings and 12 domestic resources (see

Table 0-5). See **Appendix C** for the survey results map, photo sheets, and tables. Streetscape photos S3 17-23 were numbered sequentially with the historic-age resources to provide a location context.

Table 0-5. Segment 3 Historic-Age Resources Recommended Not NRHP Eligible.

Resource	Address	Eligible	Circa Year	Style
S3 01	4403 Fannin St	No	1966	None
S3 02	1403 Wheeler Ave	No	1970	None
S3 03	1409 Wheeler Ave	No	1925	Foursquare

Source: AmaTerra 2023.

Resource S3 01 is a one-story commercial building occupied by the Jack-in-the-Box restaurant. The building has been completely remodeled to reflect their current branding. Alterations include new siding, windows, and doors. There are new metal strips on the siding, as well as rods that support the modern metal awnings.

Resource S3 02 is a two-story commercial building with concrete and brick siding and fixed metal windows. Alterations include modern windows and a change in the fenestration on the second story.

Resources S3 03 through S3 14 are residential dwellings for both single and multi-families. According to HCAD, the houses were in the Rosewood subdivision; however, no plat was found in the Harris County Clerk's (HCC) online database. The buildings had various changes to materials, workmanship, and setting. The intrusion of large, three-story buildings increased the dwelling density per lot and changed the overall feel of the neighborhood.

Resource S3 15 is a small, one-story commercial building with fiber cement siding currently occupied by a restaurant. Alterations include modern siding, windows, and an angled soffit.

Individually and collectively the buildings and neighborhood are recommended not eligible for inclusion in the NRHP under Criteria A and C as they have no known association with important historic events or trends and are not noteworthy examples of an architectural style or the work of a known architect. They have no known association with persons of historic significance under Criterion B and are thus recommended not eligible for NRHP listing.

1.15 Segment 4 Survey Results

1.15.1 Segment 4 Historic-Age Resources Surveyed

No previous historic structure surveys were identified for Segment 4. A total of 81 resources were documented during the survey within the Project APE in Segment 4. Building categories were a mix of 23 commerce, 45 domestic, one funerary, three government, seven industry, one social, and one religious. The industrial buildings were concentrated between IH-45 and Buffalo Bayou. Historians recommend two industrial buildings, International Harvester (4901 Navigation Boulevard, Resource S4 61) and Western Electric Company (WE) (601 Lockwood Drive, Resource S4 62) as eligible for the NRHP.

Segment 4 Individual Resources Recommended as NRHP Eligible

International Harvester Company, 4901 Navigation Boulevard, Resource S4 61

International Harvester Company (IHC) started in 1902 when three firms that produced harvesting equipment merged and formed the new company in Chicago, Illinois (see Error! Reference source n ot found.). By 1910 the company had over 17,000 workers in the Chicago area and annual sales of $100 million. Responding to changing technology, company innovations replaced animal-powered equipment with motorized tractors and trucks and became a major international provider of farm equipment. World War I brought about innovation and expansion into trucks. The company continued operations during the Great Depression. IHC's 1936 Annual Report stated 1935 sales were up 57% from 1934 but 35% less than 1929 (IHC 1936: 9). The Houston Branch House was constructed in 1935 (IHC 1936: 27). In the 1930s IHC was a top manufacturer of trucks with a sales network of about 11,000 dealers nationwide (Wilson 2004).

Figure 0-2. Photograph of the International Harvester Houston Branch House circa 1936.

Source: IHC 1936:27.

During World War II, the US government permitted IHC to produce tractors for agricultural needs plus produce military vehicles, aircraft, guns, and ordnance. After the war, the company made the decision to diversify its operations and started an expansion program investing in new factories, products, and machine tools (IHC 1976: 27).

The International Harvester Houston Branch House represents the thriving economy of Houston and the investment of international firms into the economy during the Great Depression Era (1929-1941). Houston Branch House is recommended eligible under Criterion A, in commerce at the local level of significance. No evidence was discovered, at the reconnaissance level, connecting the building to an architect or architectural firm. Historians identified three IHC buildings constructed in 1939. As each was different, IHC did not have a standard building for their Branch House (IHC 1936: 30). The property is recommended not eligible under Criterion B. The building is designed in a modest Art Deco style with curved concrete coping, brick siding, and an exposed concrete base. The massing is a two-story horizontal block flanked by one-story wings on either side. The central entrance extends above the two-story roof line with stepped corbeling around the original main entrance. The original windows on the front and side façades have been bricked up with several sets of windows converted to openings with a garage door. The original recessed front entrance is bricked-up and flush with the front façade. Other windows on the side façade have been replaced with smaller windows and boards. Based on the alterations, the building lacks integrity of materials and workmanship and is recommended not eligible under Criterion C. See **Appendix D** for the survey results map, photo sheets, and table.

Western Electric Company, 601 Lockwood Drive, Resource S4 62

Western Electric Company (WE) originally owned this building (see **Figure 0-3)**. Western Electric Manufacturing Company was established in Chicago in 1872. Four years later, in 1876, Alexander Graham Bell invented the telephone, and the American Bell Telephone Company (Bell) was formed in 1877. WE received the contract to manufacture Bell's telephones and by 1925 was a subsidiary company of Bell.

Figure 0-3. Photograph of the Western Electric Building in 1948. Image direction southwest.

Source: AT&T Archives n.d.

Southwestern Bell Telephone (Bell) was formed in 1920 when several telephone companies were consolidated into one entity. The company saw growth in the 1920s and constructed a 31-story administrative building in St. Louis, Missouri in 1926, plus offices in Dallas, Kansas City, and Oklahoma City in 1929. Bell's operating companies were not as hard hit by the Depression as the Western Electric manufacturing subsidiary (AT&T 1971). The start of World War II ended the Depression, but materials and expansion were for the war effort. Bell expanded their company after the war to meet customer demand. In 1944 Bell had two million phones in service; three years later they had three million phones (AT&T 1971). The building at 601 Lockwood Drive was constructed in 1948 and was occupied by Southwestern Bell Telephone Company, Western Electric Company, and Whole Electric Supplies. The Southwestern Bell Telephone Company building represents the thriving economy of Houston after World War II.

Based on historic photographs, Austin Company Engineers and Builders constructed the building (AT&T 2022). Austin Company was started in 1878 by Samuel Austin in Cleveland, Ohio. His son, Wilbert, took over the business in 1904 and innovated the concept of a complete facility service that became known as the Austin Method. The company name changed to the Austin Company in 1916. The world's first all-welded structural steel framework commercial building (1928) is accredited to Austin Company (The Austin Company n.d.). A specific architect or architectural firm was not identified during the reconnaissance survey; therefore, the building is recommended not eligible under Criterion B.

The two-story building is a rectangular plan with a flat roof and brick siding in the Art Deco style. The multi-pane, metal casement windows create horizontal bands on both the first and second floors. The off-center entrance extends outward from the wall, and it has a concrete base and curved wall. The framed pedestrian entrance is a single glazed door with sidelights topped with transom windows. Glass blocks surround the entrance and extend to the second floor. The door and awning are modern, and a few windows and openings have been changed. The building is intact and a good example of the Art Deco style. As such, the building is recommended eligible under Criterion C at the local level of significance in the area of Architecture. See **Appendix D** for the survey results map, photo sheets, and table.

1.15.2 Segment 4 Historic-Age Resources Recommended Not NRHP Eligible

The historic-age resources surveyed in Segment 4 that are recommended as not eligible for the NRHP included 23 commercial resources, the Eastwood Subdivision with 20 domestic resources, the Oaklawn Subdivision with six domestic resources, 19 individual domestic resources, one funerary resource (Evergreen Negro Cemetery), three government resources, one healthcare facility, five industrial facilities, one recreation and culture facility, and one religious facility. See **Appendix D** for the survey results map, photo sheets, and complete inventory table.

Commercial Resources

Individually and collectively, due to alterations and/or additions and the lack of association with historically important persons, events, or trends under Criteria A and B, and a lack of architectural integrity and/or significance under Criterion C, the commercial buildings in Segment 4 do not rise to the level necessary for inclusion in the NRHP and are recommended not eligible. See Error! Reference s ource not found. for a list of the resources not recommended.

Table 0-6. Segment 4 Commercial Resources Recommended Not NRHP Eligible.

Domestic Resources

Domestic is a category of function and use of buildings identified by the National Park Service's Bulletin 15. Subcategories of domestic include single dwelling, multiple dwelling, secondary structure, and hotel. For this report, the term "ancillary building" describes secondary structures such as storage sheds, carports, garage apartments, detached garages.

Single family dwellings with and without ancillary buildings are the most common resource identified by the historic resources survey. The years following World War II saw the greatest homogenization of suburban housing stock as developers took subdivision projects to counteract a housing shortage and take advantage of government subsidized housing for veterans. Most of the

houses identified in Segment 4 can be divided into four styles: Folk Victorian, Bungalow/Craftsman, Minimal Traditional, and Ranch.

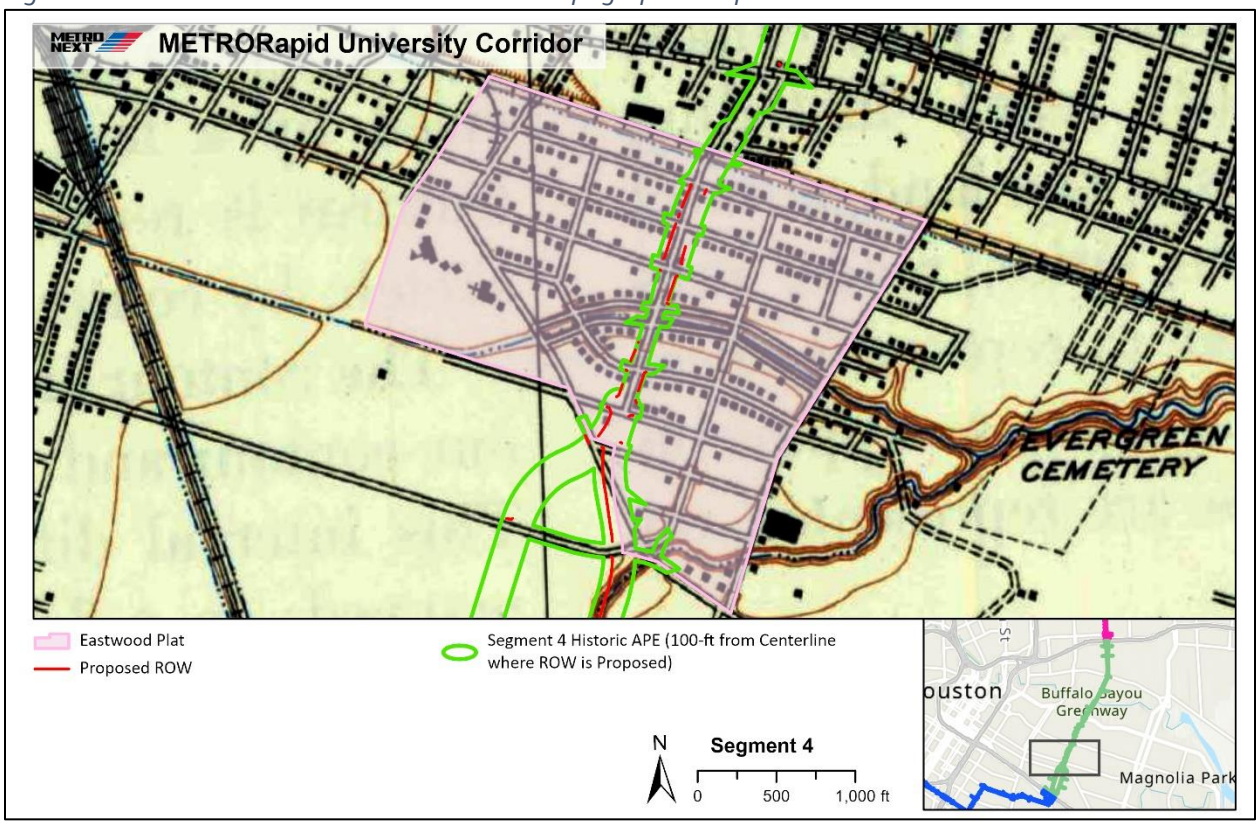
Folk Victorian Style (1870-1910)
The Folk Victorian style is a modest example of the high style Victorian styles such as the Queen Anne. Features include steep-pitched roofs, with gable front and wing roof or pyramidal roof the most common plan. Decorative detailing includes spindle columns and fretwork. The surveyed resources were modest examples of Folk Victorian style and had alterations to materials including modern siding, replacement of wood windows with vinyl windows, changes in fenestration, installation of modern metal doors, and additions.

Bungalow Style (1905-1930)
The Bungalow style is a modest example of the Craftsman Bungalow style which originated in California and quickly spread through magazines and pattern books. The bungalow is most notable for its front gable supported by large columns creating a wide front porch. The surveyed resources have the massing and coupled windows of a bungalow but failed to have architectural features such as the wide front porch to make them a notable example of the Craftsman bungalow.

Minimal Traditional (1935-1950)
Minimal Traditional styles houses were designed to provide the most efficient floor plan at the lowest cost thus providing the opportunity for home ownership to as many US citizens as possible. Following the Federal Housing Administration (FHA) guidelines insured financing for both the builder and homeowner (McAlester 2014: 589). The most prominent features are single-story, side gable roofs, rectangular plans, little or no eaves overhang, and minimal architectural details.

Ranch style (1935-1975)
The Ranch style (American Ranch, Western Ranch, or California Rambler) originated in the early 1930s in California. The style loosely followed the Spanish Colonial precedents in California and was influenced by Craftsman and Prairie house styles that had been widely popular earlier in the twentieth century. The Ranch style remained largely confined to California until after World War II. A combination of factors created a “perfect storm” that led to the wide popularity of the style in the 1950s and 1960s: the demand for single-family housing by World War II veterans starting families; the GI Bill, which provided many different types of loans for returning veterans to buy homes; an increase in automobile ownership, which freed workers from the need to live close to public transportation routes; and the strict FHA-Veterans Affairs (VA) guidelines under which developers operated in order to be able to market the houses to buyers using FHA and VA government-subsidized mortgages.

Ranch style houses have several notable, character-defining features. They are usually horizontally oriented parallel to the street with asymmetrical façades. The roof is low pitched, either gabled or hipped, with large eaves. Windows tend to be large and plentiful. Fixed picture windows and sliding glass doors are common. The overall form emphasizes the horizontal, accentuated by low walls, horizontal wood, brick, or stone siding, and a long, narrow shape with relatively simple floor plans and an attached garage (McAlester 2014: 597–612). Because Ranch houses are quite common, the bar of individual architectural significance tends to be high.



Included in the discussion of residential houses are their ancillary buildings, which include but are not limited to detached garages, detached carports, storage sheds large and small, and workshops large and small. These ancillary buildings are often added years after the original construction of the house to hold equipment and objects which cannot be stored in the primary house. Often, they are prefabricated structures or simple buildings and unless noteworthy, the buildings are included as part of the discussion of the primary residence.

The 26 residential properties identified by this survey possess no known significance under either Criteria A or B. The residential properties are not noteworthy examples of their architectural style under Criterion C and/or they possess unsympathetic alterations and/or additions reducing or substantially compromising the seven aspects of integrity. The domestic dwellings and their ancillary buildings are recommended not eligible under Criteria A, B, or C. Specific styles and select examples are discussed below. See **Appendix D** for the survey results map, photo sheets, and table.

Eastwood Residential Subdivision

The W.A. Wilson Company recorded the Eastwood Subdivision plat in 1913. The Eastwood plat, starting at the northwest corner, is roughly bounded by the Union Pacific Railroad (UPRR), Dumble, Leeland, Telephone, Polk, and Sidney streets (Error! Reference source not found.). The northeast p ortion of the plat extended to Harrisburg Road, but the platted lots were not developed and by 1957 the land was a park, today called Eastwood Park (www.historicaerials.com).

Figure 0-4. Eastwood Plat overlaid on a 1922 topographic map.

Source: AmaTerra 2023

Eastwood Plat

The Eastwood plat shows lots in a grid pattern between the UPRR and McKinney Avenue. At Park Drive the east/west roads are curved to follow a natural ravine. Streets were 60-ft. wide except for McKinley Street at 80-ft. Restrictions listed on the plat stated that the lots shall be used and occupied for residence purposes only, that no "negroes" should own or be tenants, and the lots shall not be used or sold to sell malts or liquors (HCC Eastwood 40: 42). Restrictions prohibited the "erection of tall flats and apartment buildings, which cut off air and sunshine from the adjoining home" (Wilson Company 1912: 7).

Streetcar Suburb (1888-1928)

The Houston Daily Post declared Eastwood a "model suburb, one of the most convenient, attractive and beautiful homesite additions in the city of Houston" in 1913 (ECA 2022). An advertisement booklet advised prospective buyers the property was two miles east of the courthouse, within the city limits, and accessible by the Harrisburg streetcar line or automobile. The subdivision was also accessible by auto following Harrisburg Road, which was brick paved to the property at that time, or from McKinney Avenue, which was the principal avenue through the property (Wilson Company 1911: 10).

The introduction of electrified streetcars in the US spurred development outside of downtowns as one could travel in 10 minutes the distance it took 30 minutes to walk (Ames and McClelland 2002: 17). Streetcar Suburbs were concentrated along radial streetcar lines platted with rectilinear blocks that formed continuous corridors with other platted subdivisions (Ames and McClelland 2002: 20). Eastwood has some rectilinear blocks, was adjacent to and accessible by streetcar, plus McKinney and Polk streets are examples of the continuous corridor. Eastwood Subdivision is an example of a Streetcar Suburb.

Houses

Styles documented in the survey APE included the Craftsman Bungalow, the Four Square and Colonial Revival (**Table 0-7**). Wilson's propaganda booklets specifically discuss the attributes of the Bungalow style (Wilson 1911: 9, 10). In addition to single-family buildings, several two-story apartment buildings were surveyed, Resources S4 10, S4 14, S4 19, and S4 23. Resources S4 14 and S4 23, are Ranch style apartments built later than the initial construction styles when the subdivision was platted. The modern apartments buildings are oriented to Lockwood instead of Woodside and Walker streets, respectively. The orientation to Lockwood, a north/south street, is a deviation from Wilson's original concept "to avoid throwing the rear of one home in the front or side of another home" (Wilson Company 2012: 7).

Historic topographic maps, aerial photographs, and HCAD records were reviewed to determine the number of houses constructed prior to 1945. Historians discovered there was no change to the number of buildings between topographic maps dated 1922, 1932, and 1949 (www.historicaerials.com). County Tax Assessor records had about 30 percent of the houses built prior to 1945 and based on visual desktop inspections the HCAD construction dates were inaccurate. Based on the reconnaissance level survey with the APE capturing only the lots adjacent to Lockwood Drive, Historians are unable to determine the percentages of houses that retain architectural

integrity. The buildings that were documented are recommended not eligible due to alterations such as replacement of original wood windows, loss of original columns, and additions. The buildings that did retain integrity did not rise to the level necessary for inclusion in the NRHP.

Plat Alterations

Two major changes impacted the original design and Wilson's vision of the Eastwood Plat. First, the ravine separating Park Drive was filled in between 1950 and 1953 removing the natural water feature. Historic aerial photographs show the area was retained as a greenspace and trees planted by 2002 (www.historicaerials.com). Second, Maplewood Avenue was renamed to Lockwood Drive between 1973 and 1976, when the road was widened from 60-ft to a four-lane divided road, roughly 100-ft, with a vegetated median. This changed the road use from a local road to a collector. Historians estimate about 24 houses were removed to make way for the road project. McKinley Road at 80-ft was designed by the Wilson Company to be the main thoroughfare. The widening of Lockwood Drive to 100-ft and four-lanes made Lockwood the widest street and the main thoroughfare in the plat. Lockwood's esplanade and a modern neighborhood sign reinforce Lockwood as the main thoroughfare of the neighborhood.

Comparative Analysis

According to an advertisement booklet, the William A. Wilson Company (Wilson Company) had been building homes throughout Houston since 1900 (Wilson Company 1910 n.d.). The advertisement continues to state that it was not until Woodland Heights that the company was able to demonstrate what a neighborhood surroundings should entail. The Wilson Company purchased 106-acres in 1907 to develop Woodland Heights. By 1910, $60,000 for improvements for 600 lots included engineering design, an 8-in. water main, a complete water system that serviced each house, graded and asphalt streets, cement sidewalks, curbs, plantings of hundreds of Live Oaks and Sycamore trees planted in regular rows on either side of the streets, and electric arc lights on several prominent corners (Wilson Company 1910 n.d.). In addition, plat restrictions included use of lots "for a saloon, blacksmith shop, livery stable or any other kind of trade or business whatsoever," the sale of liquor, and a minimum house value of $3,000. The Wilson Company retained engineers, architects, lawyers, and provided financing. The purchase of a large tract of land, with the developer installing improvements, and constructing the houses is an example of an operative builder (Ames and McClelland 2002:26).

Woodland Heights was located two miles northwest of downtown Houston on a streetcar line. The plat had rectilinear lots in a grid pattern. Advertisements stated the lots were either 30x100-ft or 50x100-ft. Wilson Company stated Woodland Heights "was the best example of our ideal of a high-class residence subdivision" (Wilson 1910 n.d.). Mr. Wilson himself resided in the subdivision (COH Woodland Heights n.d.). Based on the plat and streetcar access the neighborhood is an example of a Streetcar Suburb (Ames and McClelland 2002: 20). In 2011 the City of Houston designated the subdivision as a local historic district.

Since Woodland Heights is the first known example of a William A. Wilson Company subdivision, a locally recognized historic district, and the Eastwood Plat has had alterations to the character defining features of the original plat with the widening of Maplewood/Lockwood Drive and the original ravine to a flat greenspace, it is recommended the Eastwood Subdivision is not eligible under Criteria A, B, C, or D.

Oak Lawn Residential Subdivision

A cluster of Folk Victorian houses located on the east side of Lockwood Avenue, S4 34 through S4 39, prompted historians to research if the buildings were part of a subdivision. Per HCAD, the legal addresses of the properties identified Oak Lawn as the plat. A copy of the plat was not found (HCAD and HCC). A real estate website (www.neighborhoods.com) has the Oak Lawn neighborhood roughly bounded by Harrisburg Boulevard, Canal, Eastwood, and Edgewood Streets. Neighborhood boundaries may or may not represent historic plat boundaries. Commercial buildings from a later era were located on the west side of Lockwood. Infill housing, three stories tall, was visible from Lockwood Drive. A review of Google Earth aerial photographs shows infill development of modern three-story buildings in the neighborhood. Alterations to the surveyed buildings included modern materials such as asbestos and fiber cement siding and vinyl windows, plus a loss of material with replacement of columns and balustrades. The lack of cohesive building styles and infill development negates further investigation of Oak Lawn as a potential historic district. The subdivision is recommended as not eligible for listing as a historic district on the NRHP, and the resources are

recommended individually ineligible for the NRHP. See **Table 0-8** for a list of resources recommended not eligible.

Table 0-8. Segment 4 Historic-Age Resources in the Oak Lawn Subdivision Not NRHP Eligible.

Individual Domestic Historic-Age Resources

Additional single-family dwellings were surveyed in the APE and had no known association with a plat or subdivision. The houses were plain examples of their styles and/or had alterations that reduced the integrity of material, workmanship, and design. Individually and collectively the domestic buildings are recommended not eligible for the NRHP. See **Table 0-9** for a list of resources recommended not eligible.

Funerary Resources

Evergreen Negro Cemetery Resource S4 81

Evergreen Negro Cemetery was designated a Historic Texas Cemetery (HTC) in 2009. The designation is an official, honorary recognition with no restrictions or regulations on the cemetery or the cemetery owner (THC n.d.).

Cemeteries are present in every community in the United States, and although they have significance on an individual level (the descendants of those buried at the cemetery, for example), their local, regional, and national significance must be assessed using stricter metrics. According to the National Park Service's bulletin for evaluating cemeteries:

> "Individual and collective burial places can reflect and represent in important ways the cultural values and practices of the past that help instruct us about who we are as a people. Yet for profoundly personal reasons, familial and cultural descendants of the interred often view graves and cemeteries with a sense of reverence and devout sentiment that can overshadow objective evaluation. Therefore, cemeteries and graves are among those properties that ordinarily are not considered eligible for inclusion in the NRHP unless they meet special requirements. The National Register

> Criteria for Evaluation include considerations by which burial places may be eligible for inclusion in the National Register." (Potter and Boland 1992: 1).

In general, historic-age cemeteries must meet one or more of the seven criteria considerations (A-G) in addition to one or more of the four core criteria (A-D) to be considered eligible for listing. Because of the potential of discovery through archeological Review of cemeteries generally Archaeological sites, however, may be evaluated under Criterion D without the additional considerations.

Several local persons of note are buried in the cemetery: [redacted] When [redacted], the city removed approximately 490 persons to make way for the new construction. Those individuals were reinterred in other cemeteries. A record of a complete list of names of individuals interred in the cemetery is not available.

The first recorded burial is stated to be from 1887, greater than the minimum of fifty years for NRHP eligibility. However, the built environment surrounding the cemetery has changed over the years. A 1922 topographic map shows the cemetery as divided into two sections, north and south, by an unnamed road, but most likely today's [redacted]. A 1929 plat map shows the cemetery in today's west/east configuration, with plans for an 80-foot right-of-way (Lockwood Drive) to divide the two sections. The 1929 plat itself documents an "extension" to the Evergreen Negro Cemetery that overlaps the unnamed east-west road that initially bisected the two halves of the cemetery. This indicates the road, presumably [redacted], had bisected the cemetery until ca. 1929. Market Street was then relocated to border the southern edge of the cemetery. The vacated land, 40 feet in width, was subsequently used for burials.

The 1929 plat provides an outline of the original circulation patterns. Neglect, overgrowth, and time have removed any design features. The trace of [redacted] bordered by trees is evident. An estimated 1,200 persons were once interred and what grave markers remain are mostly in ruins.

Although the cemetery is the first African American cemetery in the Fifth Ward, it does not appear to have a direct association with a specific event important to the broader African American experience in Houston. Therefore, the Evergreen Negro Cemetery is recommended not eligible under Criterion A. The persons of note buried in the cemetery do not rise to the level of outstanding importance and therefore the cemetery recommended not eligible under Criterion B. The Evergreen Negro Cemetery was not designed by a master designer, nor does it possess high artistic values or distinctive characteristics, and therefore it is recommended not eligible under Criterion C.

Archaeological investigations were conducted in December 2022 within the area [redacted] The purpose of the investigations was to determine if human remains were present within [redacted], which was formerly part of the Evergreen Negro Cemetery prior to [redacted]. Cultural material documenting 33 grave locations was observed and

recorded, the majority of which contained [redacted]. Artifactual evidence indicates these burials were conducted after [redacted]. In addition, the burials appear to follow well-established late nineteenth and twentieth century practices with the remains housed in a wooden burial container and the body in a supine east-west alignment with the head facing west. The investigated burials within the cemetery are not unique and do not indicate the cemetery contains non-traditional cultural elements. The cemetery itself follows the nationwide "rural" or "garden" cemetery movement which establishes park-like settings surrounding monuments low to the ground (Potter and Boland 1992). Therefore, the cemetery is not likely to yield unique information on twentieth century burial practices of African American communities in urban environments. Criteria D analysis was completed with the recommendation of not NRHP eligible.

Government Resources

The category of Government encompasses buildings and sites associated with the operation of government that provide a public amenity. Subcategories include capitol buildings, city halls, fire stations, government offices, post offices, public works, and courthouses (NPS 1995). Three government resources were documented in the APE of Segment 4 (see **Table 0-10**).

Table 0-10. Segment 4 Historic-Age Government Resources Not NRHP Eligible.

Resource	Address	Eligible	Circa Year Built	Style
S4 05	619 Telephone Rd	No	1977	None/Fire Station
S4 60	333 Lockwood Dr	No	1978	New Formalism/Courthouse
S4 63	Lockwood @ Armour Dr	No	1975	Vacant/Water Treatment Plant

Source: AmaTerra 2023.

Resource S4 05, Fire Station #18, 619 Telephone Road, is a one-story building with office/living space and four bays of no particular style. The original Station #18 was constructed in 1926. In 1976, Station #18 was temporarily relocated, the old station was demolished, and a new facility was being constructed. Station #18 returned to 619 Telephone Road in 1980 (COH HFD n.d.). T. Leo Dawsy, Jr. was the architect. Harris County Courthouse Annex 39, 333 Lockwood Drive (Resource S4 60), is a two-story building with a flat roof and brick siding influenced by the New Formalism style. Changes in brick color indicated two openings, a door on the south façade, and a window on the east façade that have been bricked up. Currently used as a courthouse annex, a county employee stated she thought it originally was a Savings and Loan office. The lot was vacant in 1976, and the building appears on a 1981 aerial photograph (www.historicaerails.com) The first identified listing in city directories was 1983 for a labor union office. Alterations include bricked up openings thus changing the fenestration and reducing integrity of design and materials. Formally Lockwood Water Works, Resource S4 63 is located at Lockwood and Armour Drive. The site was abandoned by the city and is now owned by the nonprofit organization Buffalo Bayou Partnership (BBP n.d.). The property is slated to be turned into a public park. Individually and collectively, the three government resources are recommended as not eligible for listing on the NRHP as they have no known association with

important historic events, trends, or persons under Criteria A and B, and are not noteworthy examples of architecture or the work of a known architect under Criterion C.

Industrial Resources

The function or use of Industry covers buildings, structures, objects, or sites that extract raw materials or produce a product. Subcategories in Industry include manufacturing facilities, extractive facilities, waterworks, energy facilities, communication facilities, processing sites, and industrial storage (NPS NRB-15: 22). The five industrial resources documented in Segment 4 were located between Buffalo Bayou and the East Freeway, taking advantage of the ship channel and railroad. Individually and collectively, the buildings and compounds had alterations and additions that reduced integrity of style, workmanship, materials, and setting. All the industrial resources are recommended as not eligible for listing on the NRHP (see **Table 0-11**).

Table 0-11. Segment 4 Historic-Age Industrial Resources Not NRHP Eligible.

Source: AmaTerra 2023.

Religious Resources

According to Criteria Consideration A, religious properties must have architectural, artistic, or historic significance to be eligible for listing in the NRHP (NPS NRB-15 1995: 21). Church buildings must meet the standards set forth in Criteria A, B, and/or C. Resource S4 52, 5719 Canal Street, is a two-story church with a gable roof in a rectangular plan. Based on the marquee and building form, plus HCAD's note of a "1950 Cinema Balcony", this was formerly a theater remodeled in 2000. Alterations include modern siding, windows, architectural ornamentation on the frieze, a rooftop sculpture, and a metal fence with stone columns. The building lacks integrity of materials, style, workmanship, feeling, and association. The resource is recommended as not eligible for listing on the NRHP.

Social and Culture Resources

Social properties are facilities used by organizations such as union halls, garden clubs, fraternal groups, or volunteers of a public service organization such as the American Red Cross (NPS NRB-15: 21). Resource S4 08, 420 Telephone Road, is the Knights of Columbus Hall. The one-story barrel-roof building has brick siding. The original entrance at the gable end has a central door flanked by three windows that are now bricked up. Additional alterations include several flat roof additions on the south façade and a flat roof addition on the west façade, plus additional bricked up windows. The building lacks integrity of materials, design, and workmanship. The resource is recommended as not eligible for listing on the NRHP.

1.16 Segment 5 Survey Results

No previous historic structure surveys were identified for Segment 5. A total of 258 resources were documented in Segment 5. Building types were a mix of 71 commerce, 166 domestic, two education facilities, one government (Kashmere Gardens Public Library), one healthcare, 15 religious facilities, one recreational resource, and 2 funerary resources. Historians recommend the Kashmere Garden Elementary School as eligible for listing on the NRHP. The remaining 257 resources are recommended as not eligible for listing on the NRHP. See Appendix E for the survey results map, photo sheets, and full inventory table.

1.16.1 Historic-Age Resources Recommended NRHP Eligible

Kashmere Gardens Elementary School, 4901 Lockwood Drive, Resource S5 103

Kashmere Gardens Elementary School was established in 1949 as a segregated, all-white school. In 1956, two Black students sued HISD to attend Sherman Elementary School and McReynolds Middle School. Beneva Williams and Delores Ross were denied attendance (Bryant 2004). In 1960, 12 students applied for admittance to all-white schools, and 11 were denied entrance. They sued HISD and won. United States District Judge Ben Connally ordered HISD to desegregate their schools. The result was the enrollment of eight children at Kashmere Gardens Elementary School with Tyronne Day as the official first "Negro" student attending the school, and Kashmere Gardens Elementary as the first integrated school in Houston. Three other schools each admitted one child (Houston Chronicle 1960). By 1984 the school was fully desegregated (Target Hunger n.d.). Kashmere Gardens Elementary School is recommended eligible under Criterion A in the area of Social History under the Civil Rights movement at the local level of significance.

Per the cornerstone plaque on the school, the supervising architect was Stayton Nunn with Lloyd and Morgan as the architects. Stayton Nunn got a BS in Architecture from Rice University. He worked for architectural firms, started his own partnership, taught at Rice University, and worked for Houston Independent School District from 1946-1958. He is best known for the River Oaks Community Shopping Center (Robert 1980). Hermon Lloyd graduated from Rice University and teamed with another Rice architectural student Harvin Moore. Their firm designed over 84 houses in Rivers Oaks (Docomomo US n.d.). After WWII Lloyd partnered with W.B. Morgan. Rice alumni Arthur Jones joined the firm in 1947 and became a partner in 1962, making the firm's name Lloyd Morgan Jones (Koush 2017: 31). The firm became well known in Houston and designed over 2,000 projects. Kashmere Gardens Elementary School is recommended not eligible under Criterion B; although designed by architects, the school has no unique features and is not the best representation of the work produced by these architects.

The historic-age school buildings have brick siding and walls of horizontal windows in the Contemporary Style (**Figure 0-5**). Based on architectural features, materials, and historic aerials (1953), originally there were three main buildings and three smaller buildings. Five additional buildings were added north of the courtyard circa 1981 and 2002 (www.historicaerials.com). Covered walkways connect the buildings. Based on the additions, the school lacks integrity of materials, design, workmanship, and setting. The school is recommended not eligible under Criterion C, Architecture.

Figure 0-5. Image direction East from Lockwood Drive.

1.16.2 Historic-Age Resources Recommended Not Eligible for the NRHP

Commercial Resources

Commerce covers a wide variety of business activities, including retail stores, professional offices, warehouses, and restaurants. Many of the surveyed buildings had changes and/or additions as owners updated facades or expanded the building footprint to make the building marketable. Any association with significant persons, events, or trends discovered by Project historians was documented on the individual survey form. Commerce function subcategories include business, professional, organization, financial institution, specialty store, department store, restaurant, and warehouse (NPS NRB-15: 20). Overall, the commercial buildings lacked integrity of materials, workmanship, and design. The commercial resources are recommended not eligible for listing on the NRHP individually or as part of any historic districts (see **Table 0-12**).

Domestic Resources

Domestic is a category of function and use of buildings identified by National Register Bulletin 15. Subcategories of domestic include single dwelling, multiple dwelling, secondary structure, hotel, and camp. For this report, the term "ancillary building" describes secondary structures such as storage sheds, carports, garage apartments, and detached garages. Subcategories of the Domestic function include single dwellings, multiple dwellings, secondary structures, apartments, and hotels/motels.

Single family dwellings with and without ancillary buildings are the most common resource identified by the standing structures survey. The years following World War II saw the greatest homogenization of suburban housing stock as developers undertook large subdivision projects to counteract a housing shortage and take advantage of government subsidized housing for veterans. Most of the houses identified in the survey can be divided into four styles: Folk Victorian, Bungalow, Minimal Traditional, and Ranch.

Bungalow Style (1905-1930)

The Bungalow style is a modest example of the Craftsman Bungalow style which originated in California and quickly spread through magazines and pattern books. The bungalow is most notable for its front gable supported by large columns creating a wide front porch. The surveyed resources have the massing and coupled windows of a bungalow but failed to have architectural features such as the wide front porch to make them a notable example of the Craftsman bungalow.

Tudor Style (1900-1940)

The Tudor style (1920-1940) is based on early English building styles and identified by their steeply pitched roof and front-facing gables. Other character defining features include massive chimneys, multi-pane windows, and decorative half-timbering in the gable end. (McAlester 2014: 449).

Minimal Traditional Style (1935-1950)

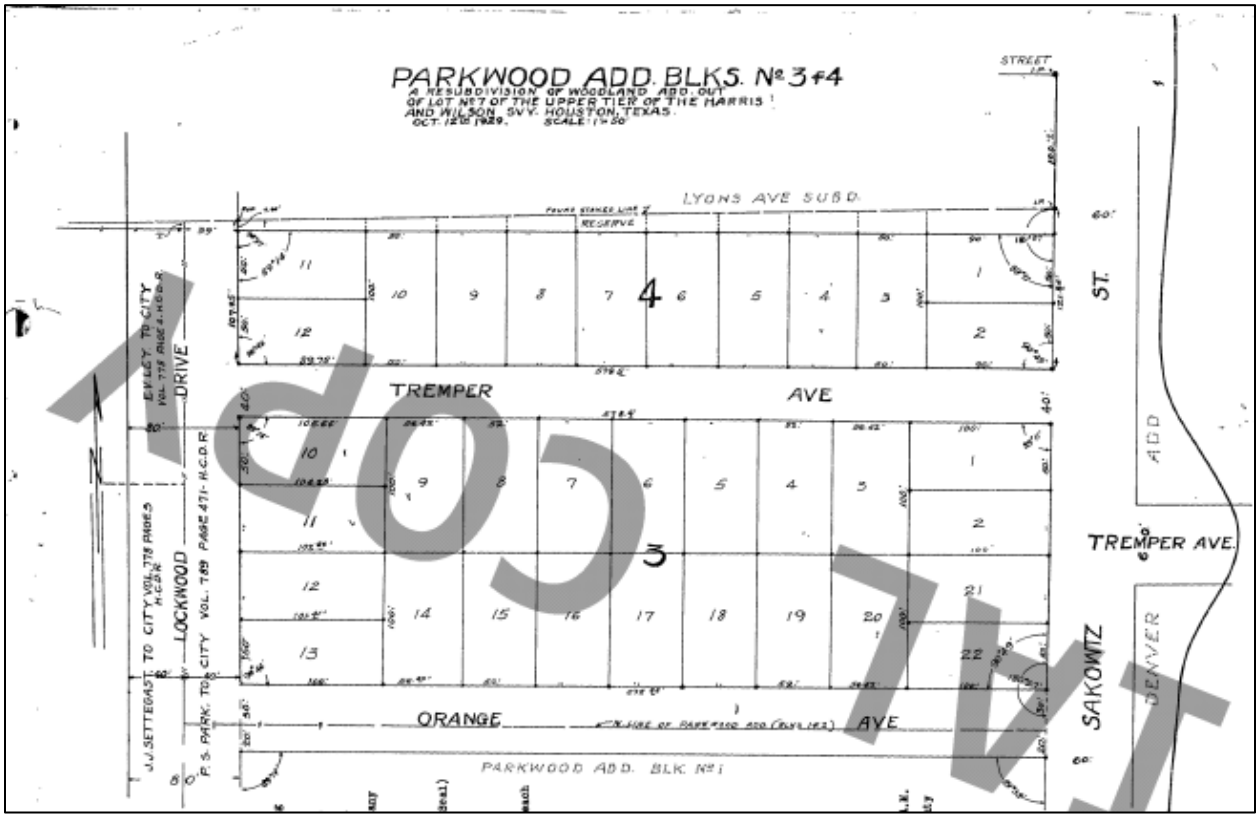
Minimal Traditional styles houses were designed to provide the most efficient floor plan at the lowest cost thus providing the opportunity for home ownership to as many US citizens as possible. Following the Federal Housing Administration (FHA) guidelines insured financing for both the builder and homeowner (McAlester 2014: 589). The most prominent features are single-story, side gable roofs, rectangular plans, little or no eave overhang and minimal architectural details.

Ranch Style (1935-1975)

The Ranch style (American Ranch, Western Ranch, or California Rambler) originated in the early 1930s in California. The style loosely followed the Spanish Colonial precedents in California and was influenced by Craftsman and Prairie house styles that had been widely popular earlier in the twentieth century. The Ranch style remained largely confined to California until after World War II. A combination of factors created a "perfect storm" that led to the wide popularity of the style in the 1950s and 1960s: the demand for single-family housing by World War II veterans starting families; the GI Bill, which provided many different types of loans for returning veterans to buy homes; an increase in automobile ownership, which freed workers from the need to live close to public transportation routes; and the strict FHA-Veterans Affairs (VA) guidelines under which developers operated in order to be able to market the houses to buyers using FHA and VA government-subsidized mortgages.

Ranch style houses have several notable, character-defining features. They are usually horizontally oriented parallel to the street with asymmetrical facades. The roof is low pitched, either gabled or hipped, with large eaves. Windows tend to be large and plentiful. Fixed picture windows and sliding glass doors are common. The overall form emphasizes the horizontal, accentuated by low walls, horizontal wood, brick, or stone siding, and a long, narrow shape with simple floor plans and an attached garage (McAlester 2014: 597–612). Because Ranch houses are quite common, the bar of individual architectural significance tends to be high.

Included in the discussion of residential houses are their ancillary buildings, which include detached garages, detached carports, storage sheds, large and small, and workshops. These ancillary buildings are often added years after the original construction of the house to hold equipment and objects that cannot be stored in the primary house. Often, they are prefabricated structures or simple buildings and unless noteworthy the buildings are not included as part of the discussion of the primary residence.



Parkwood Residential Subdivision

Parkwood Addition blocks 3 and 4 were a re-subdivision of Woodland Addition of lot number 7 of the upper tier of the Harris and Wilson Survey (HCC Vol. 013049 Pg. 1) (see **Figure 0-6**). According to the plat, filed in 1937, P.S. Park was the President of the Parkwood Company and owner of the land.

The plat map has two blocks, two streets, Tremper and Orange, and a total of 32 lots. Many of the houses in the Parkwood Addition were designed in the Tudor Style. At the time of the survey there were 10 lots with houses, four vacant lots, and the remaining lots were combined and had commercial buildings or were used for industrial storage. Based on the lack of a cohesive subdivision, the change in lots sizes and use, plus alterations and additions to the individual houses, Parkwood Addition and the buildings therein are recommended not eligible under Criteria A, B, and C individually or as a potential historic district (see

Table 0-13).

Figure 0-6. Map Portion of the Parkwood Addition plat filed in 1937.

Individual Domestic Historic-Age Resources

A total of 137 single-family dwellings, not identified with any plat, were surveyed in Segment 5. Residential properties are often the most common building type encountered during a survey. Most are single-family houses. Unsympathetic alterations, such as the application of synthetic siding or replacement of original windows, or additions that increase the square footage and change the original design, dimmish the building's architectural integrity and make it not eligible for NRHP listing (see **Table 0-14**).

Table 0-14. Segment 5 Individual Domestic Resources Recommended Not Eligible to NRHP.

Multi-family Dwellings

Segment 5 had the highest number of multi-family dwellings (31 parcels) in the Project APE. The typology included duplexes, former hotels converted to apartments, and apartment block buildings. In addition, several lots had multiple single-family dwellings on a single parcel. All the multi-family dwellings were recommended not eligible for listing on the NRHP (see **Table 0-15**).

Funerary Resources

Resource S5 69, 3902 Lockwood Drive, was a conglomeration of three attached buildings. A one-story flat roof building is attached, on either side, to residential dwellings and the south façade had an attached carport (c. 2006). Alterations include boarded up windows, a change in fenestration, loss of the front porch and siding, plus a change in use. The building was vacant at the time of the survey.

Lockwood Funeral Home, S5 232, 9402 Lockwood Drive, started as a one-story Contemporary style building with brick siding. Alterations include modern windows, an attached carport, a two-story rear addition, and a large addition to the north façade that almost doubled the size of the original footprint (c. 1984). The funerary resources are recommended as not eligible for listing on the NRHP.

Government Resources

Kashmere Garden Branch Public Library, Resource S5 107, 5411 Pardee Street, was designed by the local architecture firm of Don J. Tomasco and Associates (see **Figure 0-7**). Constructed in 1971, the New Formalism style is evident in the wide overhanging eaves supported by oblong concrete columns set on a raised concrete foundation. The fluted columns have a cut-away base, giving the feeling of floating columns, while the fluting matches the pattern of wood of the frieze. The building's architectural features remain intact, and it is a solid example of New Formalism. No evidence was found to link the library to a specific event or trend. The architectural firm was not known for innovative architectural designs and no awards were identified with the building. Based on the known information the building does not rise to the level of significance necessary for inclusion in the NRHP under Criteria A, B, or C and is therefore recommended not eligible.

Figure 0-7. Kashmere Garden Public Library. Camera direction: Northeast.

Source: AmaTerra 2023.

Healthcare Resources

Resource S5 10, Leland Pharmacy, 5412 Farmer Street is a one-story, gable roof building with metal siding and brick wainscot. The building has no distinctive style. Alterations include modern windows,

roof, siding, a side addition, and a change in fenestration. The resource is recommended as not eligible for listing on the NRHP.

Recreation and Culture Resources

Resource S5 47, Lockwood Skating Palace, 3323 Lockwood Drive, is a one-story roller skate rink with fiber cement siding. The protruding porch extends around the buildings corner and is supported by pairs of columns set at about 30 degrees to form a "V" shape. Per HCAD the building was constructed in 1948. The current owners have operated the business since 1982 (Lockwood Skating Palace n.d.). Alterations include modern siding, a rear addition, and changes in fenestration. The building lacks integrity of design, material, and workmanship. The building has no known association with significant trends, events, or people. Resource S5 47 is recommended not eligible for the NRHP under Criterion A, B, and C.

Religious Resources

According to Criteria Consideration A, religious properties must have architectural, artistic, or historic grounds to be eligible for listing in the NRHP (NPS NRB-15 1995: 21). Church buildings must meet the standards set forth in Criteria A, B, and/or C. Segment 5 had the most religious buildings in the survey area. Churches as an institution are historically important to the African American community, not just for religion, but as a gathering space for shared community beliefs (The Registry n.d.). The term "Black Church" is a misnomer as the African American community is as diverse in their religious beliefs as any other ethnic group (The Registry n.d.). Based on the church names there was no obvious indication that any of the churches surveyed were directly associated with an African American congregation. In general, the buildings lacked architectural integrity due to alterations. All the religious facilities are recommended not eligible for inclusion in the NRHP (see **Table** 0-16).

Table 0-16. Segment 5 Religious Resources Recommended Not Eligible to NRHP.

Eligibility and Effect

A total of 15 resources, one historic district and 12 individual resources, are recommended eligible and two are listed on the NRHP. Based on the criterion for an adverse effect, it is recommended there will be no adverse effect to the recommended eligible and/or listed resources. See **Table 0-1** for Recommended NHRP Eligible or Listed and **Table 0-2** for Recommended Effects on Eligible or Listed NRHP Resources.

1.17 Eligibility

Table 0-1. Recommended NHRP Eligible or Listed Historic Resources.

Segment	Historic Resources
Segment 1	No resources are listed or recommended eligible.
Segment 2	1836 Richmond Avenue is a Mission Revival style house eligible under Criterion C in the area of Architecture (TxDOT n.d.).
	S2 07, 3336 Richmond Avenue, is a New Formalism style building, designed by Neuhaus and Taylor, recommended eligible under Criterion C in the area of Architecture at the local level.
	S2 08, 3334 Richmond Avenue, is a New Formalism style building recommended eligible under Criterion C in the area of Architecture at the local level.

Segment	Historic Resources
	S2 09, 3323 Richmond Avenue, is an Expressionism style building, designed by Neuhaus and Taylor, recommended eligible under Criterion C in the area of Architecture at the local level.
	S2 10, 3322 Richmond Avenue, is an International style building recommended eligible under Criterion C in the area of Architecture at the local level.
	S2 11, 3311 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
	S2 13, 3121 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
	S2 15, 3101 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
Segment 3	Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy) at 1906 Cleburne Street was determined eligible for the NRHP under Criterion C in the area of Architecture (Mitchell and Pettis 2019).
	Third Ward Historic District. In 2019 the THC determined the district eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development and under Criterion C in the area of Architecture.
	Houston Negro Hospital at 3402 Ennis Street, S3 25a, is listed in the NRHP under Criterion A in the area of Ethnic Heritage/Black. The hospital and nursing school are on one parcel in the NRHP eligible Third Ward Historic District.
	Houston School of Nursing School at 3402 Ennis Street, S3 25b, is listed under Criterion A in the area of Ethnic Heritage/Black and Criterion C in the area of Architecture. The hospital and nursing school are on one parcel in the NRHP eligible Third Ward Historic District.
Segment 4	International Harvester Company (Texas Mattress Makers), 4901 Navigation Boulevard, Resource S4 61. International Harvester Houston Branch House represents the thriving economy of Houston and the investment of international firms into the economy during the Great Depression Era (1929-1941). Houston Branch House is recommended eligible under Criterion A in the area of Commerce at the local level of significance.
	Western Electric Company (Harris County Sheriff Offices), 601 Lockwood Drive, Resource S4 62. The building at 601 Lockwood Drive was constructed circa 1948 and was occupied by Southwestern Bell Telephone Company, Western Electric Company, and Whole Electric Supplies. The Southwestern Bell Telephone Company building represents the thriving economy of Houston after World War II and is recommended eligible under Criteria A, in the area of Commerce at the local level of significance. The building is intact and a good example of the Art Deco style. The building is recommended eligible under Criterion C in the area of Architecture at the local level of significance.

Segment	Historic Resources
Segment 5	Kashmere Gardens Elementary School, 4901 Lockwood, Resource S5 103, was an all-white school when it opened in 1949. Following a lawsuit by several Black families in 1960, the school became the first integrated school in Houston. It is recommended eligible under Criterion A in the area of Social History under the Civil Rights Movement at the local level of significance.

1.18 Recommended Effects to Eligible or Listed NRHP Historic Resources

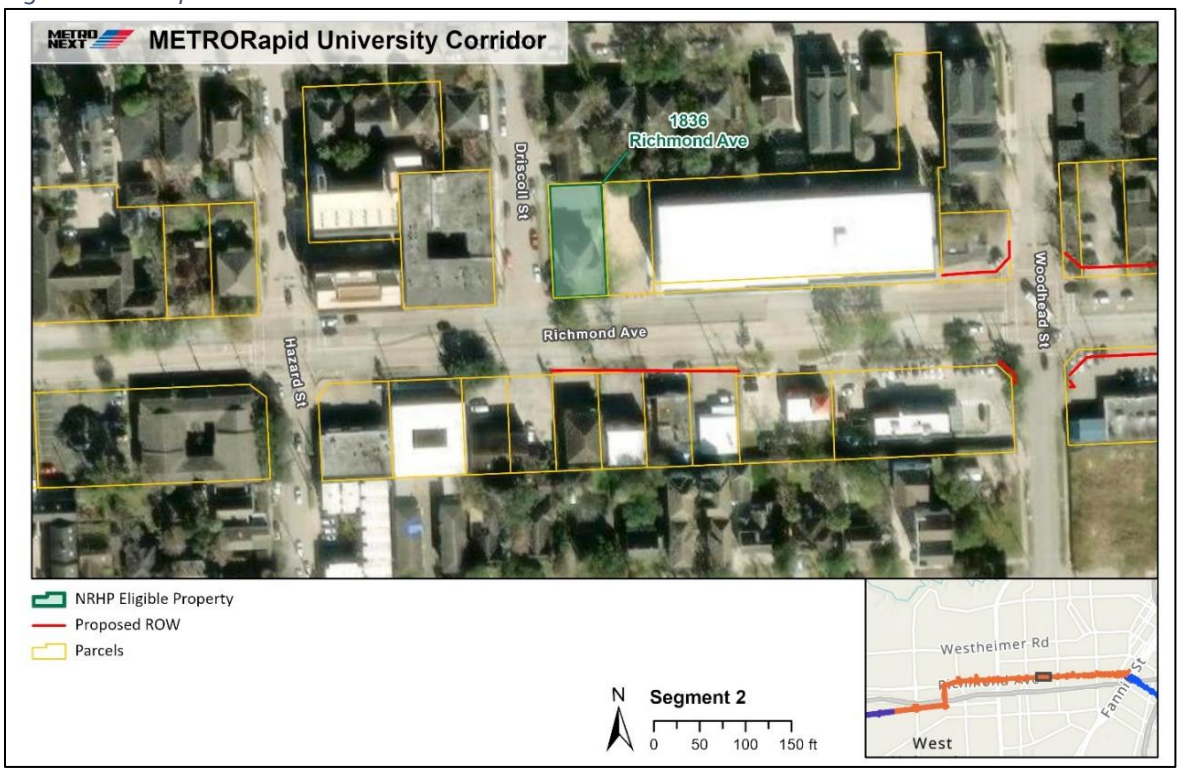
Based on the updated Project design and updated ROW data dated January 27, 2023, and supplemented on March 25th. **Table 0-2** identifies potential impacts to the recommended eligible and listed NRHP resources.

Table 0-2. Recommended Effect on Eligible or Listed NRHP Resources.

Segment	Resource	Eligible or Listed Resources	Effect Recommendation
Segment 1	N/A	No resources listed or recommended eligible	No effect.
Segment 2	N/A	1836 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 07	3336 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 08	3334 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 09	3323 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 10	3322 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 11	3311 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 13	3121 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
	S2 15	3101 Richmond Avenue NRHP eligible under Criterion C	No adverse effect.
Segment 3	S3 16a	Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy) 1906 Cleburne Street NRHP eligible under Criterion C	No adverse effect.
		Third Ward Historic District NRHP eligible under Criteria A and C	No adverse effect.
	S3 25a	Houston Negro Hospital 3402 Ennis Street NRHP listed under Criterion A Contributing to Third Ward Historic District	No adverse effect.
	S3 25b	Houston Negro Hospital School of Nursing	No adverse effect.

Segment	Resource	Eligible or Listed Resources	Effect Recommendation
		NW corner of Holman and Ennis Streets NRHP listed under Criteria A and C Contributing to Third Ward Historic District	
Segment 4	S4 61	International Harvester Company (Texas Mattress Makers), 4901 Navigation Boulevard NRHP eligible under Criterion A	No adverse effect.
	S4 62	Western Electric Company (Harris County Sheriff's Office) 601 Lockwood Drive NRHP eligible under Criteria A and C	No adverse effect.
Segment 5	S5 103	Kashmere Gardens Elementary School, 4901 Lockwood NRHP eligible under Criterion A	No adverse effect.

Source: AmaTerra2023.



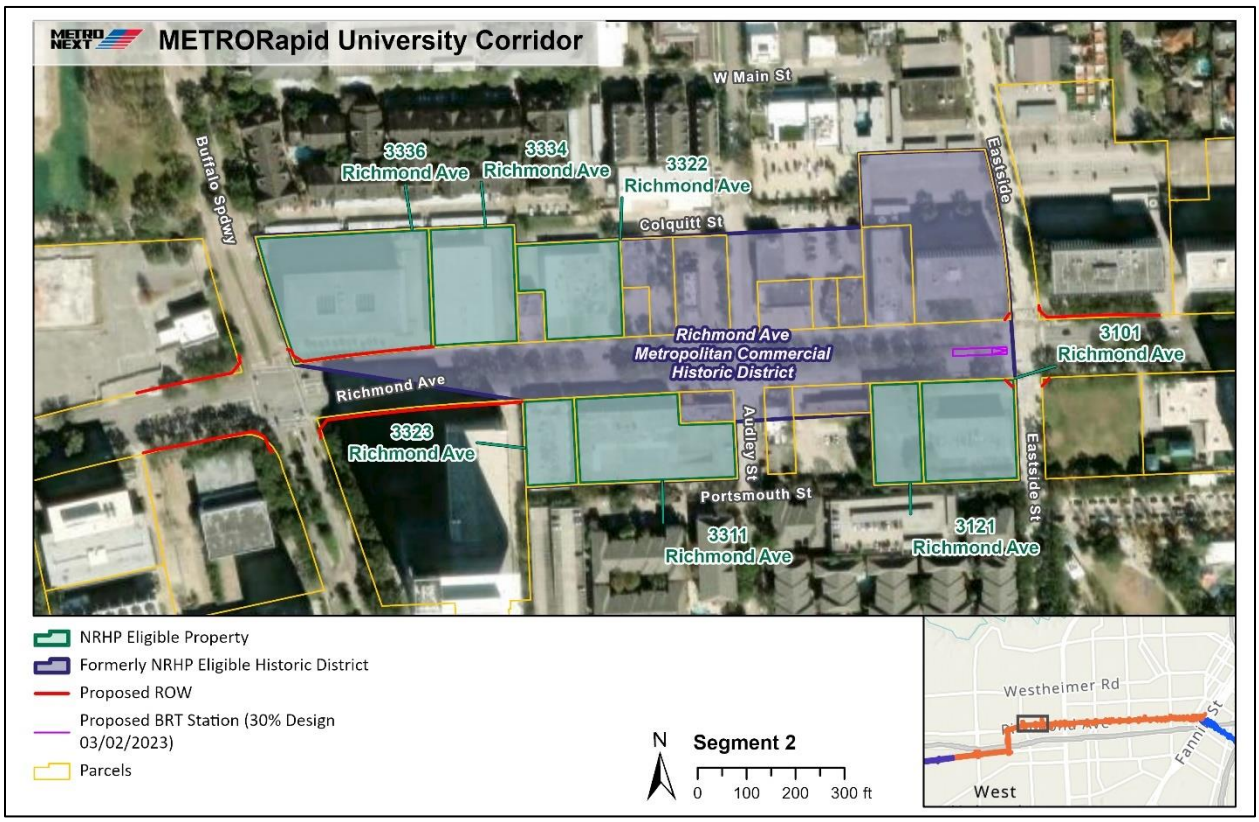
1.18.1 Segment 2 Effects on NRHP Eligible Properties

Segment 2 has eight NRHP eligible properties all eligible under Criterion C in the area of Architecture. As of January 27, 2023, new ROW was proposed at Avenue, 3336 Richmond Avenue, and 3101 Richmond Avenue.

1836 Richmond Avenue

The building at 1836 Richmond Avenue is eligible under Criterion C, Architecture. The front façade is oriented to Richmond Avenue and has a yard and sidewalk. There is no proposed ROW acquisition at this property and no change that would alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. See **Figure 0-1**. The Project is recommended to have no adverse effect on 1836 Richmond Avenue.

Figure 0-1. Proposed ROW at 1836 Richmond Avenue.



Source: AmaTerra 2023.

3336 Richmond Avenue

Resource S2 07, 3336 Richmond Avenue, is eligible under Criterion C, Architecture. The 83,765-square foot (sf) parcel is located at the northeast corner of Richmond Avenue and Buffalo Speedway. The ROW acquisition is 730-sf for a total percentage of 0.0087 of land. The building is sited at an angle to Richmond Avenue approximately 73 to 90-ft north of the existing curb. A parking lot, green space, a 3.5-ft sidewalk, green space, and a curb occupy the space between the building's front façade and Richmond Avenue. The land acquisition for the parcel is along Richmond Avenue reducing the green space to 2 to 4-ft in width and increasing the sidewalk to 8-ft. Landscaping will still be included in the same location, would not alter the characteristics that qualify the resource under Criterion C, and therefore the new ROW is recommended to have no adverse effect (**Figure 0-2**).

Figure 0-2. Aerial Photograph of the Richmond Avenue Metropolitan Commercial Historic District.

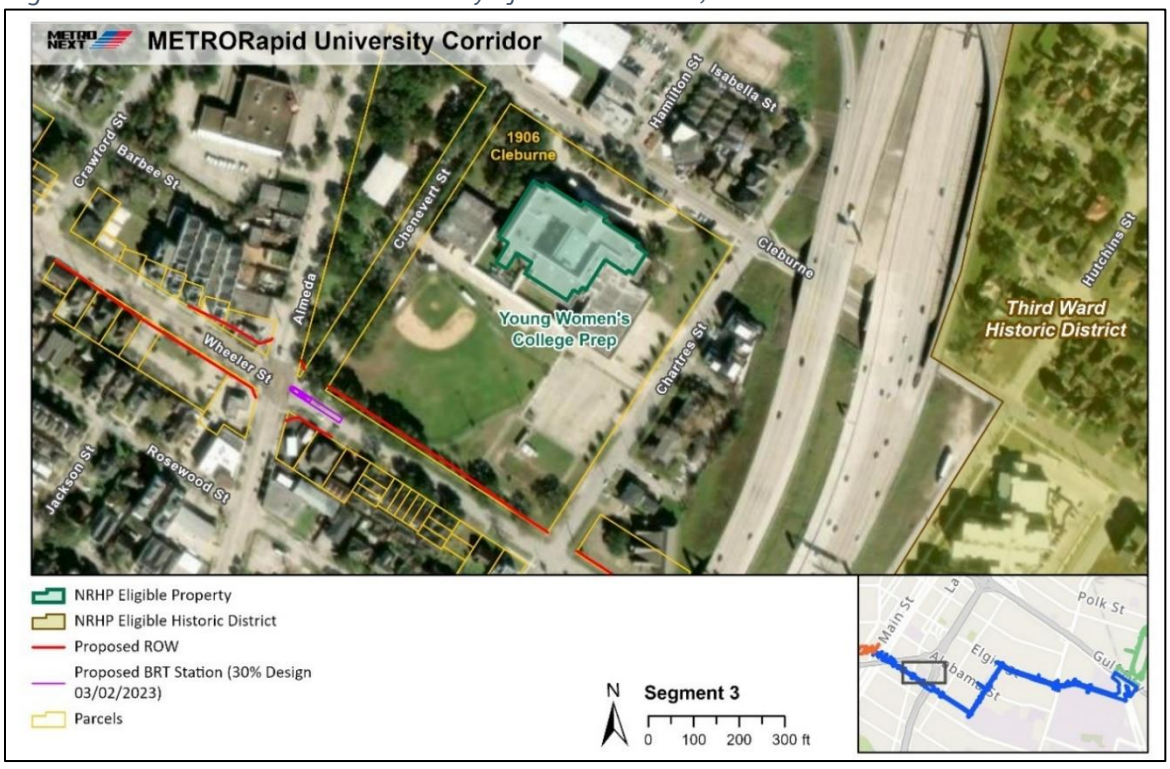
Source: AmaTerra 2023.

3334, 3323, 3322, 3311, and 3121 Richmond Avenue

No proposed ROW will occur at Resources S2 08, S2 09, S2 10, S2 11, and S2 13. Therefore, a finding of no adverse effect is recommended as there would be no change that would alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.

3101 Richmond Avenue

Resource S2 15, 3101 Richmond Avenue is a 40,482-sf parcel at the southwest corner of Richmond and Eastside streets. The ROW acquisition is 112-sf for a total percentage of 0.0027 of land. The building is sited parallel to Richmond Avenue and approximately 78-ft south of the existing curb. A parking lot, green space, a sidewalk, green space, and a curb occupy the space between the building's front façade and Richmond Avenue. The proposed new ROW is a corner clip at Richmond and Eastside Streets. It would not impact the building's integrity of location, design, setting, materials, workmanship, feeling, or association, and is recommended to have no adverse effect upon the building.



1.18.2 Segment 3 Effects on NRHP Eligible Resource

There are two NRHP eligible resources and two NRHP listed resources in Segment 3. The A.S. Sidney Johnston Jr. High School (Young Women's College Preparatory Academy) Resource S3 16a, and the Third Ward Historic District are eligible for the NRHP. The Houston Negro Hospital and Nursing School, S3 25a/b, are individually listed in the NRHP and located in the NRHP eligible Third Ward Historic District.

1906 Cleburne Street: Albert Sidney Johnston Jr. High School (Young Women's College Preparatory Academy)

Resource S3 16a, the school building, (NRHP eligible) is located within a 434,999-sf parcel, which also contains the baseball field (Resource S3 16b, not recommended NRHP eligible) The campus is bounded by the streets of Cleburne, Chartres, Chenevert, and Wheeler, with the NRHP eligible building oriented to Cleburne Street (see **Figure 0-3**). A service road, parallel to Wheeler Avenue connects Chenevert and Chartres Streets and bifurcates the campus, separating the NRHP eligible building (S3 16a) from a baseball field and parking lot (S3 16b). The proposed new ROW as of January 27, 2023, is 4,744-sf along Wheeler Avenue, roughly 400-ft southwest of the service road at the rear façade of the school, where S3 16b is located. The baseball field (S3 16b) is modern, built circa 1990, and is not part of the recommended boundary for the NRHP eligible school (S3 16a), The ROW acquisition would not impact the NRHP eligible property's integrity of location, setting, design, materials, workmanship, feeling, or association, nor its ability to convey its architectural significance under Criterion C. It is recommended the new ROW along Wheeler Avenue would have no adverse effect on the NRHP eligible school building.

Figure 0-3. Recommend NRHP Boundary of 1906 Cleburne, S3 16a.

Source: Mitchell and Pettis (2019), AmaTerra 2023

NRHP Eligible Third Ward Historic District

A substantial portion of Segment 3 travels through the NRHP eligible Third Ward Historic District. Within the historic district are two individually NRHP listed resources, The Houston Negro Hospital and Nursing School, S3 25a/b, both have proposed ROW acquisition. Multiple new corner clips are proposed throughout the district (see **Table 0-3** and **Figure 0-4**).

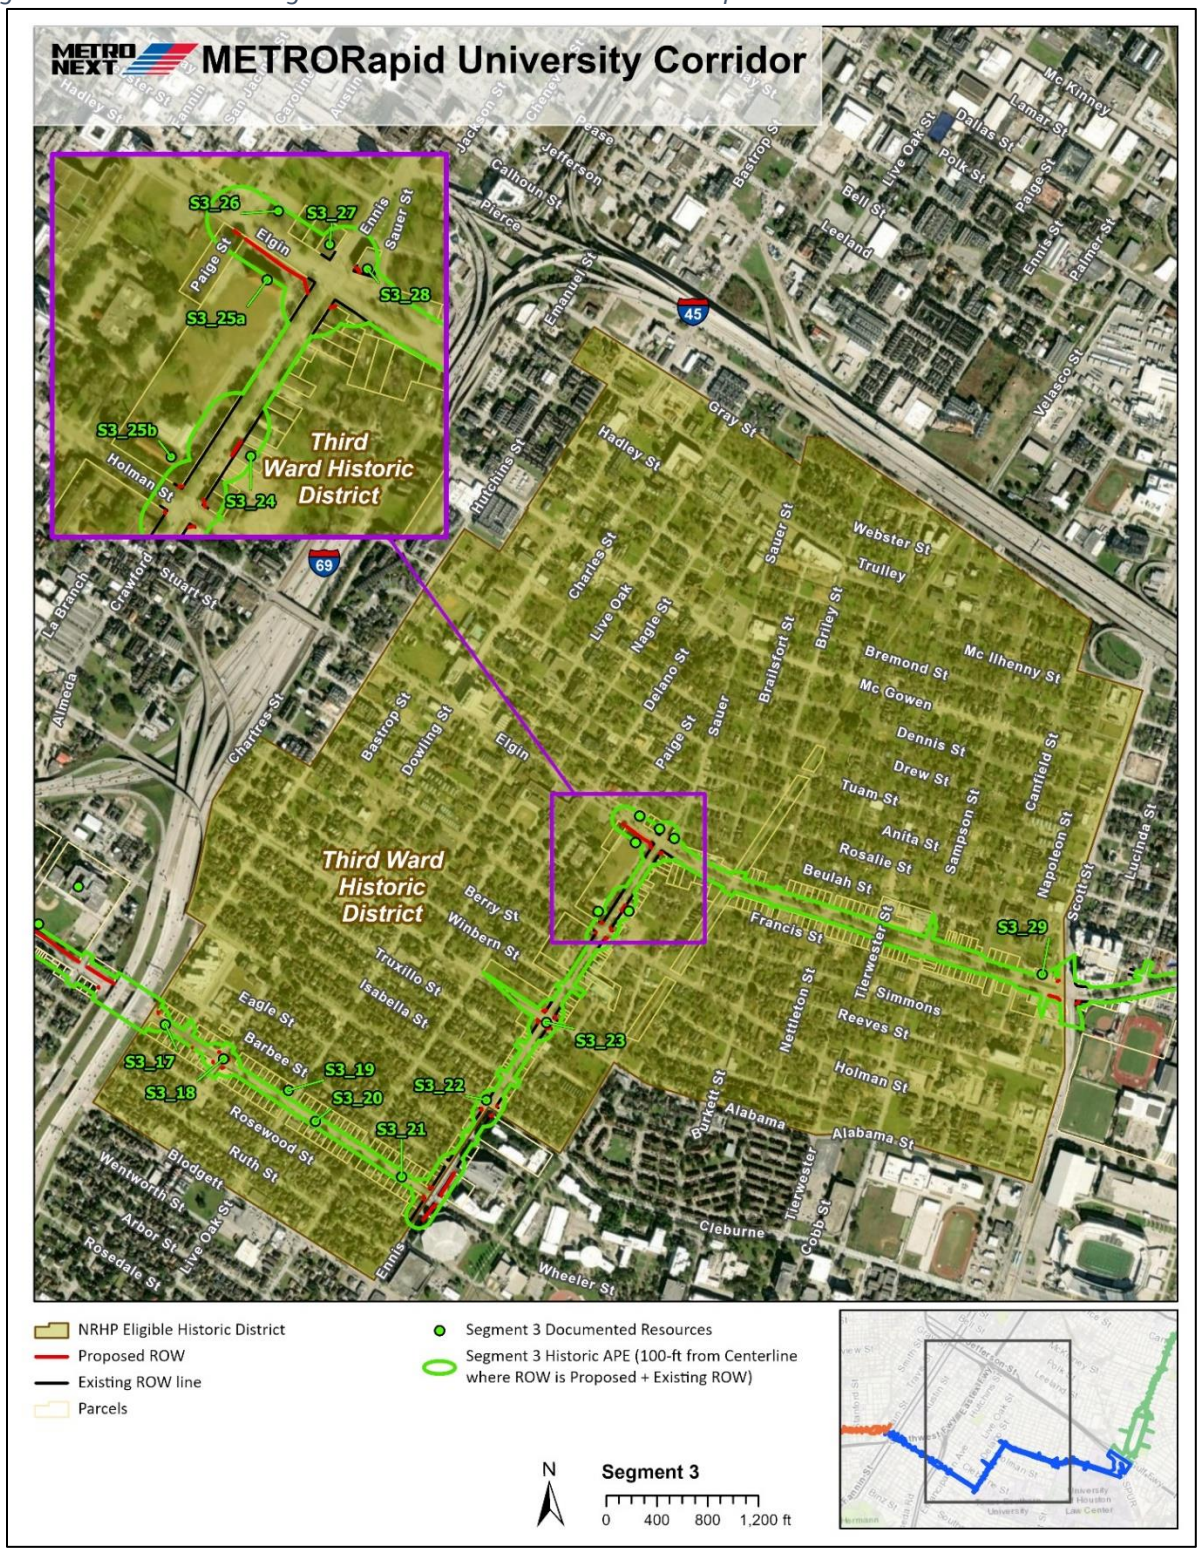


Table 0-3. ROW Acquisitions of Parcels with Buildings in the NRHP Third Ward Historic District.

	Address	Parcel Sq Ft	ROW (Sq Ft)	Notes
1	4314 Emancipation	10,000	5.0	Streetscape photo S3 18
2	4311 Emancipation	7,350	33.7	Streetscape photo S3 18

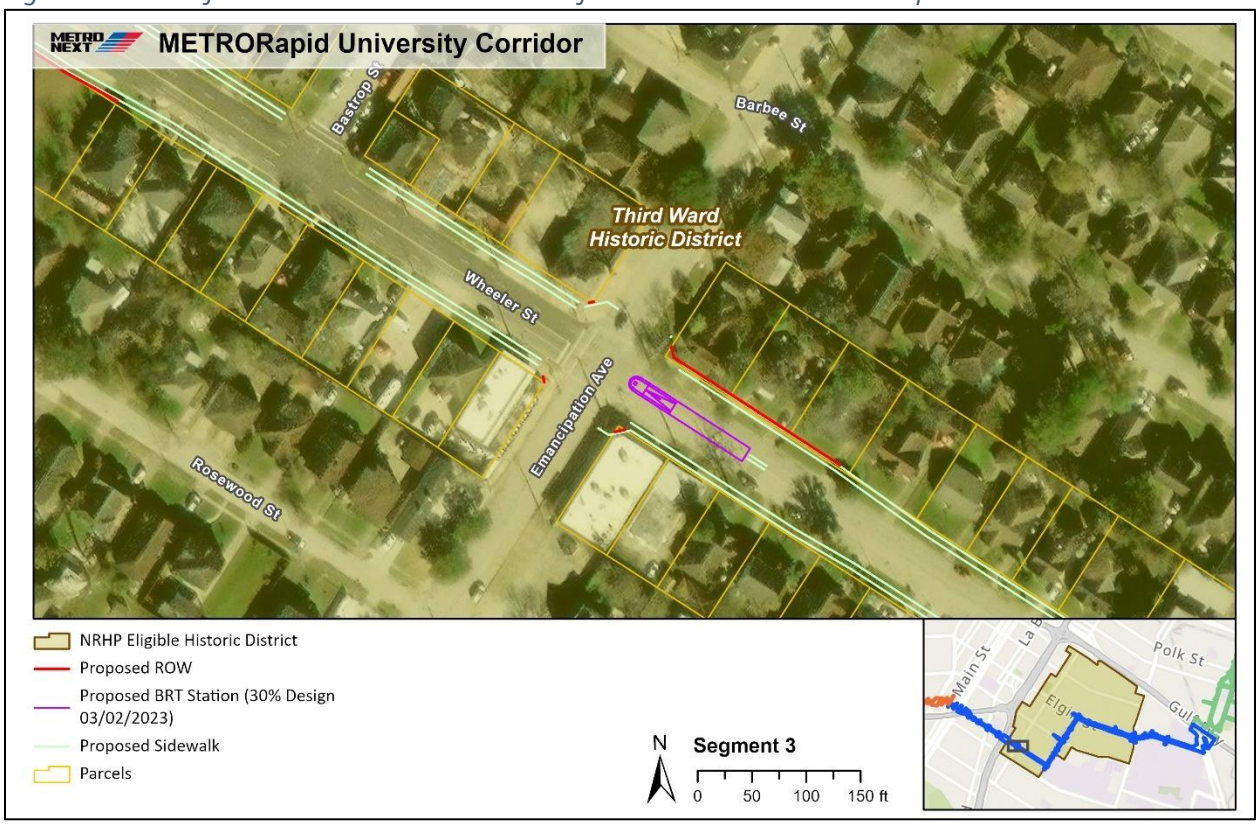
TOTAL	11 parcels	245,987	3,125	

Source: METRO 2023

In 2008 and 2019, the THC determined the Third Ward Historic District eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development, and eligible under Criterion C in the area of Architecture. A NRHP nomination completed in 2008 describes the architecture as varied and following national architectural movements. (Randall and Korfmacher 2008: E 19). There was no discussion of landscape or setting in the NRHP nomination. The NRHP nomination has not gone through the designation process at the time this report was written. The houses abutting Wheeler street are predominately Tudor style with front yards, a sidewalk and green space before the curb which is typical for this era. The historic district covers roughly 750 acres. The removal of 3,125 sq ft of landscaping for eleven parcels is nominal and would not alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association; therefore, it is recommended as no adverse effect to the historic district.

Figure 0-4. Third Ward Eligible NRHP Historic District with Proposed ROW.



Source: AmaTerra 2023

Proposed ROW Greater Than A Corner Clip

4311 Emancipation, 2405 Wheeler and 2411 Wheeler streets

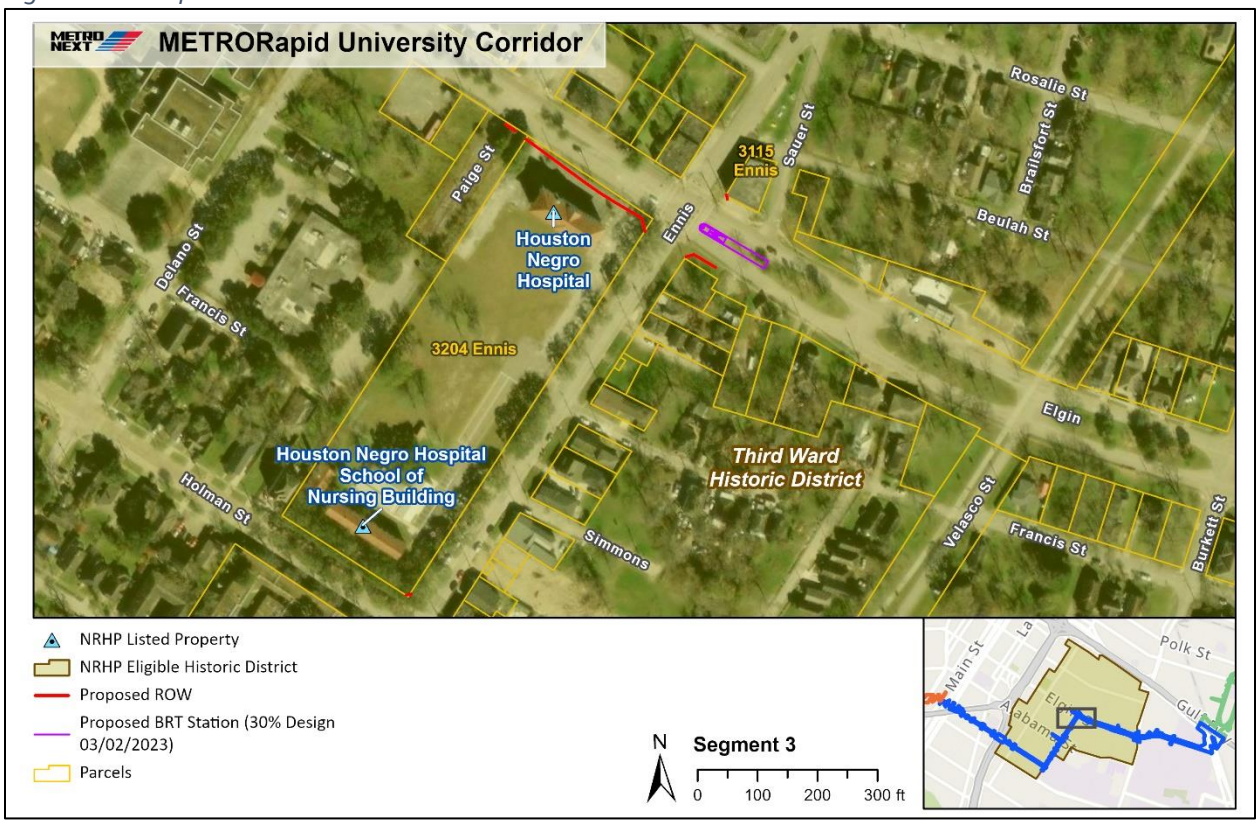
A center bus station is proposed for the 2400 block of Wheeler Avenue, east of Emancipation Avenue. To accommodate the station, the road would be widened thus decreasing the vegetated parkway (safety buffer) from roughly 11-ft to 2 to 4-ft wide. To accommodate pedestrian traffic the existing sidewalk, averaging 3.5 to 5-ft, would be widened to 6-ft. The landscape pattern of vegetated parkway, sidewalk, and front yard would remain intact. The new ROW is minimal per parcel and to the historic district (**Figure 0-5**). No buildings would be impacted the buildings. The Project is recommended to have no adverse effect as no change that would alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.

Figure 0-5. ROW for bus station at intersection of Wheeler Street and Emancipation Avenue.

Source: AmaTerra 2023

3204 Ennis Street: the Houston Negro Hospital and Nursing School

Resources S3 25a and b, the Houston Negro Hospital and Nursing School, at 3204 Ennis, are listed on the NRHP as individual resources. Both buildings are located on the same parcel and contribute to the NRHP eligible Third Ward Historic District. The parcel is the length of one city block bounded by Ennis, Elgin, and Holman streets. The parcel is 187,000-sf with a parcel length of 251-ft adjacent to Elgin Street. Effective January 27, 2023, new ROW acquisition is 2,729-sf along Elgin Street would



be required (**Figure 0-6**). The Hospital building is parallel to Elgin Street at the northern portion of the parcel where the new ROW is proposed. An asphalt parking lot, vegetation, and sidewalk occupy the space between the hospital and the road. The ROW would remove the sidewalk and grass; however, a new sidewalk be added. The hospital building is designated for its association with ethnic and social history, and the land proposed for ROW acquisition does not play a role in the resources' ethnic and social history. Based on the small percentage of land proposed for the ROW acquisition to the overall parcel and the hospital building's historic relationship to the road, it is recommended the proposed ROW would not impact the property's integrity of location, setting, design, materials, workmanship, feeling, or association, or impact the property's ability to convey its historic significance under Criterion A. A finding of no adverse effect upon the property is recommended.

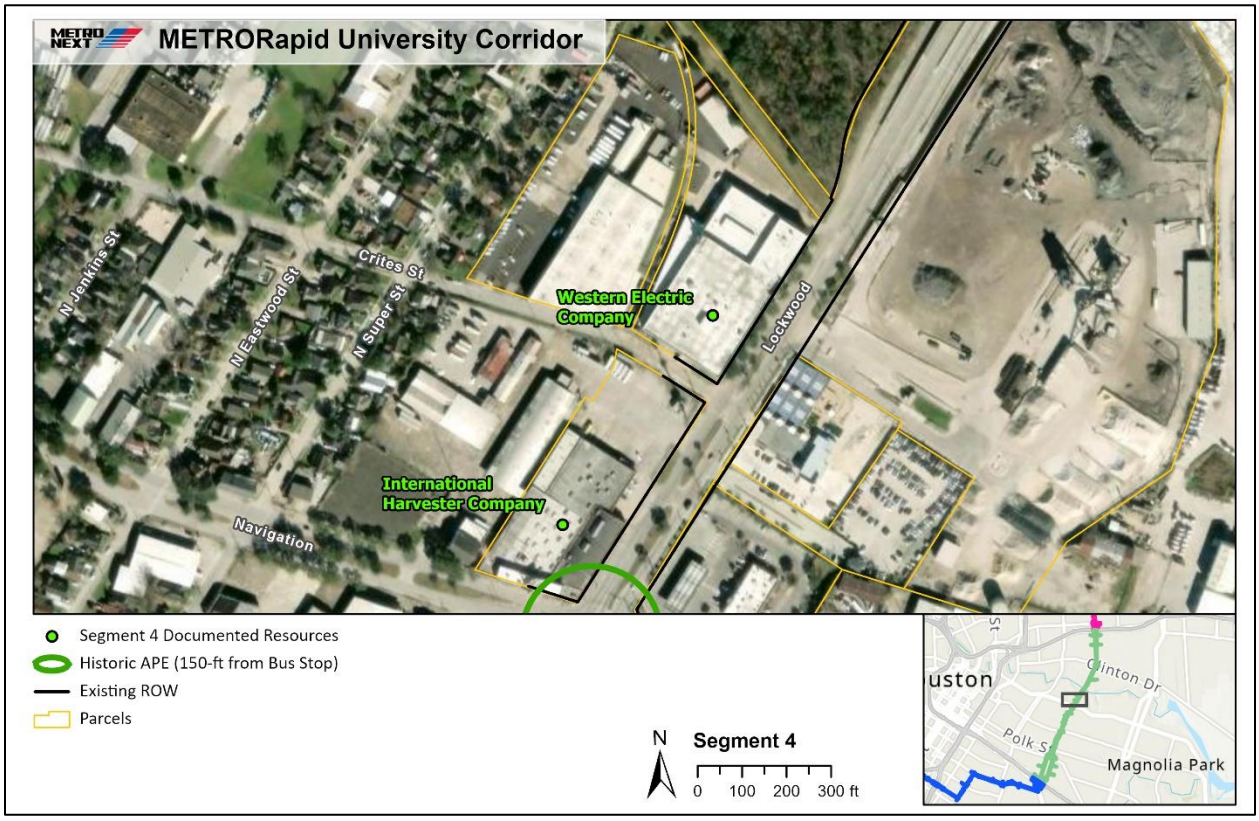
The Nursing School (S3 25b) is located at the northwest corner of Holman and Ennis streets. ROW acquisition consists of a corner clip at an existing sidewalk for compliance with ADA. The building is located approximately 67-ft from the road intersection. The corner clip would not impact the property's ability to convey its significance under Criterion A or Criterion C or diminish its integrity of location, setting, design, materials, workmanship, feeling, or association. Therefore, it is recommended the corner clip would have no adverse effect on the historic property.

3115 Ennis Street

Resource S3 28, 3115 Ennis Street, is a two-story, two-part commercial block building that is currently vacant. The building is contributing to the NRHP eligible Third Ward Historic District. Head-in parking spaces are located on Elgin Street. The building is within the southwest corner of the existing ROW along Elgin Street. The current Project design would require additional ROW to add a ten-foot sidewalk, ADA ramps, and signals (see Figure 0-6). These proposed changes would remove the parking spaces on Elgin Street which are currently located within the existing ROW. According to historic aerial photographs, in 1957 Elgin Avenue dog-legged at 3115 Ennis avoiding buildings and vegetation located south of the subject building. Parking for the building was on the east side. By 1962, the dogleg was removed, and the subject building was now directly parallel to the road and the previous buildings and vegetation were gone as the space was occupied by the road. The parking spaces are not a vital or integral part of its contribution to the historic district. The building's contribution to the historic district is limited to its footprint and direct physical form, and not the street parking which comprises part of its setting. Therefore, it is recommended the corner clip would have no adverse effect on this contributing resource or the wider historic district.

Figure 0-6. Proposed ROW at 3204 and 3115 Ennis.

Source: AmaTerra 2023.



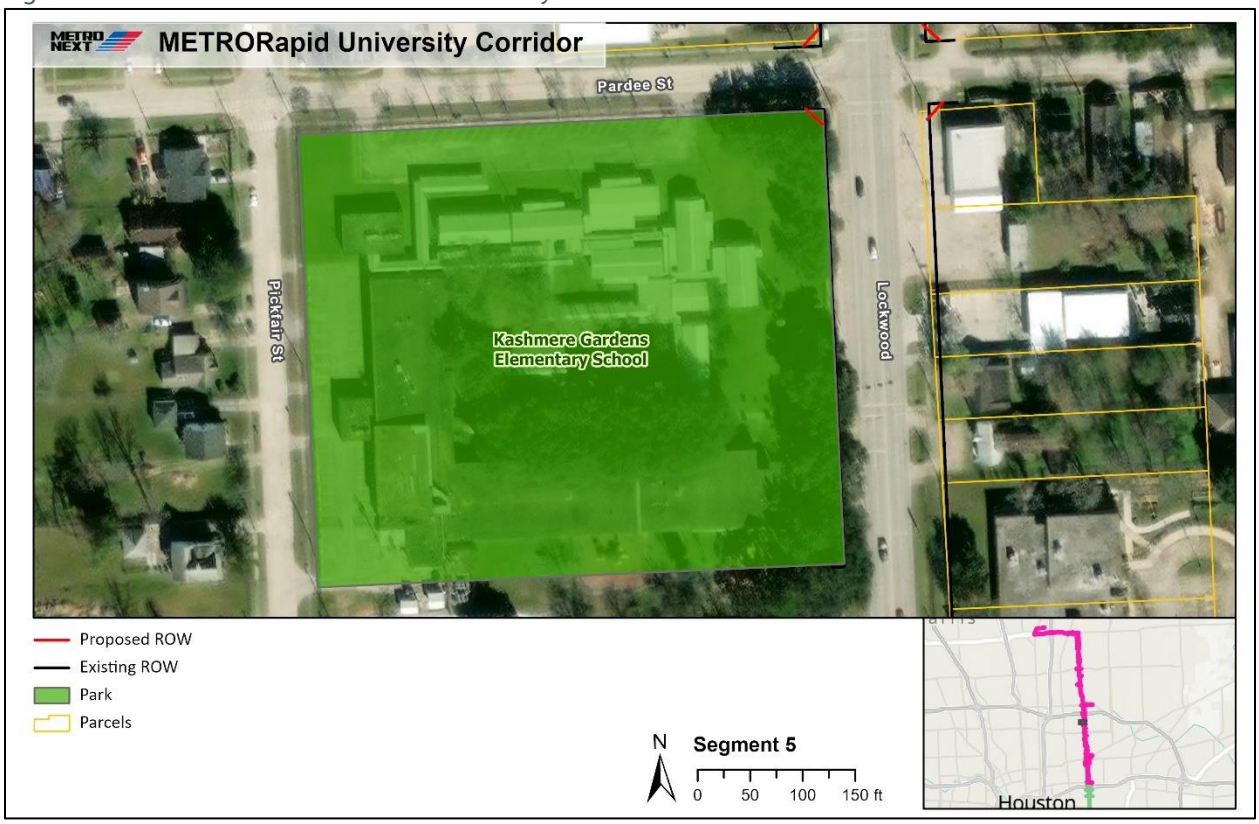
1.18.3 Segment 4 Effects on NRHP Eligible Resource

There are two recommended NRHP eligible resources in Segment 4: the International Harvester Company – Texas Mattress Makers (S4 61), and the Western Electric Company – Harris County Sheriff's Office (S4 62).

4901 Navigation Boulevard and 601 Lockwood Drive

Resource S4 61, the International Harvester Company/Texas Mattress Makers at 4901 Navigation Boulevard and Resource S4 62, the Western Electric Company/Harris County Sheriff's Office at 601 Lockwood Drive were documented as the buildings were in the APE when surveyed in July 2022. As of January 27, 2023, no new ROW would be acquired from Resources S4 61 or S4 62, it is recommended the Project would have no adverse effect upon either property (see **Figure 0-7**).

Figure 0-7. Aerial Photograph with Proposed ROW and APE.



Source: AmaTerra 2023.

1.18.4 Segment 5 Effects on NRHP Eligible Resource

There is one recommended NRHP eligible resource in Segment 5, the Kashmere Gardens Elementary School (S5 103) at 4901 Lockwood Drive. The school campus covers about half a city block and is bounded by Lockwood, Pardee, and Pickfair Streets (see **Figure 0-8**).

The parcel is 217,500-sf with about 690 ft adjacent to Lockwood Drive. A proposed ROW of 113-sf would be acquired at the northwest corner of the lot abutting Lockwood Drive. The school is recommended eligible under Criterion A for its association with the Civil Rights Movement in Houston. The school campus and original school building have had multiple alterations and additions to the campus since it was built in 1949. The corner clip of 113-sf would not physically impact any buildings on the campus, nor would it affect aspects of the building's setting which are integral to its significance under Criterion A, and it would not affect the school's ability to convey its Criterion A significance. It is recommended the ROW acquisition would have no adverse effect upon the school.

Figure 0-8. The Kashmere Gardens Elementary School at 4901 Lockwood.

APPENDIX A – Segment 1

METRO University BRT Project, Houston, TX
Historic Resources Survey
Segment 1

Resource	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S1 01	5612 Fondren Road	No	C. 1969	None	Commerce/specialty store	Alterations include modern awning, windows, and doors.
S1 02	5607 Forney Drive	No	C. 1968	New Formalism influence	Commerce/warehouse	Alterations include modern windows.
S1 03	6640 Harwin Drive	No	C. 1971	None	Religion/religious facility	Alterations include modern roof, doors, and siding, plus two additions to the west façade (c. 2012 & 2020) and a gazebo (c.2014) in the east parking lot.
S1 04	5401 Rampart Street	No	C. 1977	None	Domestic/multiple dwelling	Alterations to the apartment buildings include new siding, doors, and windows.
S1 05	5511 Renwick Drive	No	C. 1970/1971/1976	None	Industry/processing plant	A one-story concrete block building was located near the entrance. The building did not have any obvious alterations, nor did it appear to have unique or innovative architectural design. Five other buildings are on the property but are not visible from public ROW.
S1 06	5500 El Camino Del Rey Street	No	C. 1970	Spanish Colonial Revival influence	Domestic/multiple dwelling	Alterations include new siding, windows, and railing.
S1 07	5302 Chimney Rock Road	No	C. 1974/2019	Pagoda	Commerce/restaurant	Pizza Hut. Alterations include new siding, windows, door, entryway, siding, and signage.
S1 08	5401 Chimney Rock Road	No	C. 1979	None	Domestic/multiple dwelling	Alterations include new siding and windows.

Houston's METRO Bus Rapid Transit (BRT) University Line
Historic Resources Windshield Survey (cut-off date 1977)
Segment 1
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S1 01	Address:	5612 Fondren Road
Resource Type:	Building	Function/Use:	Commerce/specialty store
Estimated Year built:	C. 1969	References:	HCAD
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and workmanship		

Description: A one-story building with no notable stylistic influences. The walls feature concrete masonry unit construction, with full height plate glass picture windows and double glass entry doors on the façade. A projecting flat awning supported by metal posts shades the façade. Alterations include modern awning, windows, and doors.

Camera direction: Southwest

Resource No.	S1 01	Address:	5612 Fondren Road
			
Camera direction: Northwest			

Houston's METRO Bus Rapid Transit (BRT) University Line
Historic Resources Windshield Survey (cut-off date 1977)
Segment 1
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S1 02	Address:	5607 Forney Drive
Resource Type:	Building	Function/Use:	Commerce/warehouse
Estimated Year built:	C. 1968	References:	HCAD
NRHP Eligibility:	Not Eligible: lacks integrity of material		

Description: A one-story warehouse with pebbledash siding and gambrel roofs. Flat awnings project over the windows. The slim, floor-to-roof pilasters reflect the New Formalism influence. Alterations include modern windows.

Camera direction: Northeast

Resource No.	S1 02	Address:	5607 Forney Drive

Resource No.	S1 03 SANATAN SHIV SHAKTI MANDIR [Hindu]	Address:	6640 Harwin Drive
Resource Type:	Building	Function/Use:	Religion/religious facility
Estimated Year built:	C. 1971	References:	HCAD, https://shivshaktimandir.org
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, workmanship, and setting.		

Description: A one-story building of no particular style with three large domes at the northwest corner. The walls are a combination of brick veneer and stucco siding topped with a shed roof. Alterations include modern roof, doors, and siding, plus two additions to the west façade and a gazebo in the east parking lot. Per historic aerials the dome addition was added in 2012, the gazebo by 2014, and the addition by 2020. Per the organization's website they purchased this property in 2008 for Hindu religious rites and ceremonies and as a resource and education center for Hindu heritage and culture. The 1,000 sq ft addition is a Garbha Bruha to seat Hindu Deities and was dedicated in November 2013 (https://shivshaktimandir.org).

Segment 1
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S1 04 Pavilion Place Apartments	Address:	5401 Rampart Street
Resource Type:	Building	Function/Use:	Domestic/multiple dwelling
Estimated Year built:	C. 1977	References:	HCAD
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and workmanship		

Description: Resource S1 04 is a large apartment complex located east and west of Rampart Street. Per HCAD there are 52 buildings with two of the buildings remodeled in 2012 and 2017. The apartment buildings are two stories with brick siding and stucco chimneys. The leasing office has been remodeled with new siding, windows, and roofing material. Alterations to the apartment buildings include new siding, doors, and windows.

Historic Resources Windshield Survey (cut-off date 1977)
Segment 1
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S1 05	Address:	5511 Renwick Drive
Resource Type:	Building	Function/Use:	Industry/processing plant
Estimated Year built:	C. 1970/1971/1976	References:	HCAD
NRHP Eligibility:	Not Eligible: insufficient significance under NRHP Criteria		

Description: Argos Southern Star Concrete processing plant. Access to the parcel was blocked due to a security gate. A one-story concrete block building was located near the entrance. The building did not have any obvious alterations, nor did it appear to have unique or innovative architectural design. Per HCAD there are six buildings on the parcel: three metallic warehouses (c. 1971 and 1976), two office buildings (c. 1970), and one warehouse (c. 1970).

Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 02a and S2 02b	Address:	4151 Southwest Freeway
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1971	References:	HCAD
NRHP Eligibility:	Not Eligible: Insufficient significance under NRHP Criteria		

Description: Parcel contains two buildings. S2 02a is a two-story parking garage with a central staggered ramp. The garage is adjacent to Westpark Drive.

S2 02b is a multistory, two-part vertical block office tower with orange brick siding. The windows create a pattern of vertical stripes on the south and north facades. The original windows have been replaced. The primary facade is oriented to IH-69 and has a faux arched gallery at the base. The Spanish Colonial Revival style influence is evidenced by the brick color and the faux arch gallery. Individually and collectively the buildings do not rise to the level of significance necessary to meet NRHP Criteria.

Camera direction: Northeast, rear façades facing Westpark Drive

Resource No.	S2 02a and S2 02b	Address:	4151 Southwest Freeway

Resource No.	S2 04 La Quinta Inn	Address:	4015 Southwest Freeway
Resource Type:	Building	Function/Use:	Domestic/motel
Estimated Year built:	C. 1968	References:	HCAD
NRHP Eligibility:	Not Eligible: lack of integrity of materials, workmanship, and design		

Description: The motel consists of two buildings, one is an "H" plan centered around a pool while the second is a rectangular plan oriented to IH-69. Both buildings are two-stories with rooms accessed from the exterior. Alterations include changes to the main entrance and modern doors.

La Quinta Motor Inns concept by Sam and Philip Barshop started in San Antonio, Texas, constructed for the 1968 World's Fair. The Barshops franchised in 1973 but discontinued licensing in 1977. The motels had 100 to 125 rooms and buildings were standardized with precast concrete panels, prefabricated bathrooms, and architectural elements of the Spanish Colonial Revival style. In 1990 La Quinta modified their signage and underwent renovation and remodeling of their older motels to rebrand the chain (Jakle, Sculle, and Rogers 1996: 205-206).

Historic Resources Windshield Survey (cut-off date 1977)
Segment 2
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 07 Jefferson Chemical	Address:	3336 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1965	References:	HCAD, www.houstonmod.org
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: This New Formalism style building was designed by Neuhaus and Taylor. The façade is covered with horizontal black windows that reach from floor to ceiling. The overhanging roof is supported by thin columns. The top floor has black windows that are recessed on all sides and an overhanging roof.

3336 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as an excellent example of the New Formalism style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the green spaces and parking lots around the building retain their original orientations and sizes, although the specific vegetation in the green spaces has potentially been altered. Nonetheless as original components of the building's setting, they are considered contributing to the setting of the property. 3336 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 08	Address:	3334 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1970	References:	HCAD, https://dahp.wa.gov
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: This one-story, New Formalism style building has wide, over-hanging eaves supported by thin, white columns.

3334 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as an excellent example of the New Formalism style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the green spaces and parking lots around the building retain their original positions, although the green spaces have been altered with new signage and planters. Despite the alterations, both are considered contributing components to the setting of the property. 3334 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Segment 2
Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 09 Phoenix Insurance Co.	Address:	3323 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/vacant - not in use
Estimated Year built:	C. 1961	References:	www.houstonmod.org
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: Local architectural firm Neuhaus and Taylor designed this two-story building with office space on the top floor and parking/entrance at the ground floor. The Expressionism Style is evident in the curved, concreted arches cantilevered over the second-floor windows. The added fencing underneath is not original but not permanent and removable.

3323 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as an excellent example of the Expressionism Style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the grassy areas appear to be part of the original setting, but the trees/other vegetation do not and are considered non-contributing. 3323 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 10	Address:	3322 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1964	References:	HCAD, Hicks & Company, 2007
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: A two-story building of the International style. The flat roof has a wide eave and supports horizontal panels that hang past the eave line. The second-floor windows are the walls as they extend from floor to ceiling resting upon the concrete floor that cantilevers over the brick veneer base.

3322 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as a good example of the International Style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the vegetative areas and parking lots appear to be part of the original setting and are considered contributing. 3322 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Resource No.	S2 11	Address:	3311 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/strip center
Estimated Year built:	C. 1969	References:	HCAD, https://dahp.wa.gov
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: Three-story commercial building in the New Formalism style. The glass walls are made of vertical windows of black glass that extend from floor to ceiling. The brick veneer side walls and white concrete roof extends beyond the windows. Six white columns extend from floor to ceiling on the front façade and connect to the second floor penetrating the window. A horizontal orange band acts as a sign and extends across five of the seven bays.

3311 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as a good example of the New Formalism style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the vegetative areas and parking areas appear to be part of the original setting and are considered contributing. 3311 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Resource No.	S2 13	Address:	3121 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1961	References:	HCAD, https://dahp.wa.gov
NRHP Eligibility:	Individually eligible under Criterion C (Architecture) at the local level		

Description: Two-story commercial building in the New Formalism style with parking below the second story. The second floor has recessed windows with wide overhanging eaves supported by square columns. According to www.Houstonmod.org this building was originally the Pontiac Motor Division building.

3121 Richmond Avenue is recommended individually eligible under Criterion C at the local level in the area of Architecture as a good example of the New Formalism style. The building retains integrity of location, design, setting, materials, workmanship, and feeling. Per historic aerials, the vegetative areas (including the trees) in front of the building appear to be part of the original setting and are considered contributing. 3121 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Surveyed June 2022
Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 14	Address:	3118 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1965/2010	References:	HCAD, Hicks & Company 2007
NRHP Eligibility:	Not Eligible: Building lacks integrity of design, materials, and workmanship.		

Description: Two-story commercial building in the International style. The second floor appears to be suspended above a glass box. The floor-to-ceiling black glass windows are recessed between overhanging eaves and cantilevered floors. A metal support beam has been added under the cantilevered upper floor. Older photos show the building was remodeled in 2010, with larger replacement windows and the added support beam impacting integrity of design, materials, and workmanship.

3118 Richmond Avenue is not recommended individually eligible under Criterion C due to the window changes and added support beam impacting its historic integrity. 3118 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

Surveyors: Kurt Korfmacher and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S2 16	Address:	3100 Richmond Avenue
Resource Type:	Building	Function/Use:	Commerce/business
Estimated Year built:	C. 1962/2008	References:	HCAD, https://dahp.wa.gov
NRHP Eligibility:	Not Eligible: Building lacks integrity of design, materials, and workmanship.		

Description: A two-part vertical tower in the New Formalism style. The top floor has recessed windows with wide overhanging eaves. The vertical windows on the front and back facades extend from floor to ceiling. Per HCAD the building was remodeled in 2008. Alterations include new siding and windows. Based on the colors, different shapes of siding panels and changes to the fenestration, the remodel diminished the design and original vertical emphasis of the front façade, impacting integrity of design, materials, and workmanship.

3100 Richmond Avenue was previously recommended as contributing to the then-NRHP eligible Richmond Avenue Metropolitan Commercial Historic District in 2007.

APPENDIX C – Segment 3

Site ID#	Street	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S3 01	4403 Fannin St	No	C. 1966	None	Commerce/restaurant	Alterations include new siding, windows, and doors. There are new metal strips on the siding, as well as rods that support the modern metal awnings.
S3 02	1403 Wheeler Avenue	No	C. 1970	None	Commerce/specialty store	Alterations include modern windows and a change in the fenestration on the second story.
S3 03	1409 Wheeler Avenue	No	C. 1925	Foursquare	Domestic/single dwelling	Alterations include a new door, siding, and windows, plus an attached carport. Additions have been added to the front and side facades.
S3 04	1411 Wheeler Avenue	No	C. 1930	Tudor	Domestic/single dwelling	Alterations include a new awning on the front facade, a rear addition, and vinyl siding in the gable ends of the east and west facades.
S3 05	1419 Wheeler Avenue	No	C. 1930	Tudor	Domestic/multiple dwelling	Alterations include some enclosed windows and entrances.
S3 06	4414 La Branch St	No	C. 1930	Bungalow	Domestic/multiple dwelling	Alterations include new windows and fencing. Modern infill development surrounding the building removes the integrity of setting.
S3 07	4411 La Branch St	No	C. 1935/2018	Bungalow	Domestic/multiple dwelling	Alterations include enclosed sidelights at the front door, missing brackets in the eave line, and modern shutters. It was remodeled in 2018 per HCAD.
S3 08	4405 La Branch St	No	C. 1925	Bungalow	Domestic/multiple dwelling	Alterations include a side addition on the south façade, replacement of vegetation with concrete, plus a 6-foot metal fence around the property, which change the setting.
S3 09	4401 La Branch St	No	C. 1927	Bungalow	Commerce/specialty store	Alterations include an infilled bay and the original openings have been infilled with concrete blocks and metal. Other alterations include painted brick and a rear addition. A modern metal garage with a shed roof, rolling garage door and fixed windows is on the parcel.
S3 10	4315 La Branch St	No	C. 1930	Bungalow	Domestic/multiple dwelling	Alterations include new windows, front door, porch flooring, and lights. The 8-foot security fence around the property reduces integrity of setting.
S3 11	4311 La Branch St	No	C. 1930/2023	Bungalow	Domestic/single dwelling	Alterations include a new porch door, a king-post truss on the second story's gable, and a front addition.
S3 12	4305 La Branch St	No	C. 1930	None	Domestic/multiple dwelling	Alterations include a permastone wainscot, aluminum siding and a change in the fenestration. Based on the roof lines, the original house was extended and attached to a detached garage in the rear yard, plus a one-story addition was added to the east façade.
S3 13	1508 Barbee St	No	C. 1930	Craftsman	Domestic/single dwelling	Alterations include new windows, a partially enclosed porch, a carport, and a rear addition.
S3 14	1510 Barbee St	No	C. 1930	Craftsman	Domestic/single dwelling	Alterations include new windows, a new door, modern columns on the front porch, and a change in the fenestration. A detached modern garage is in the rear yard.

Resource No.	S3 16a and S3 16b	Address:	1906 Cleburne Street
Resource Type:	Building	Function/Use:	Education/school
Estimated Year built:	1925	References:	Mitchell & Pettis 2019: 181, plaque
NRHP Eligibility:	NRHP Eligible under Criterion C, Architecture		

Description: S3 16a is the former Albert Sidney Johnston Junior High School (currently the Young Women's College Preparatory Academy). The school is a good example of an early twentieth century school constructed in the Beaux Arts style and designed by a prominent Texas architectural firm of Sanguinet, Staats, Hedrick, and Gottlieb, with William Ward Watkin as consulting architect. THC determined the school building only NRHP eligible under Criterion C, Architecture. The school grounds and setting were not relevant to the building's architectural significance. Alterations to the building include a modern metal canopy supported by concrete columns added in 2017. Although the canopy blocks the view of the front façade it could be removed without destroying original materials and therefore the building is still recommended NRHP eligible under Criterion C, in the area of Architecture.

S3 16b is the baseball field in the southern area of the Academy's property. Based on aerial photographs the field had been vacant until 1982 when a parking lot was added. The baseball diamond was added by 1995 (www.historicaerials.com). The setting of the school on the parcel and therefore the vacant land behind the school were not integral to the buildings architectural significance and therefore the addition of the baseball field does not impact the schools integrity.

NRHP Eligibility:	NRHP listed in 1982 under Criterion A in the area of Ethnic Heritage – Black, Social History Contributing to the NRHP eligible Third Ward Historic District		

Description: The Houston Negro Hospital, later known as the Riverside General Hospital, is a three-story Spanish Colonial Revival style building constructed of reinforced concrete and hollow tile with stucco siding. Local architect Maurice J. Sullivan designed the hospital and developed the master plan. A wing was added in 1961 but has since been removed. The name was changed to Riverside General Hospital in 1961, and the hospital and nursing school were listed on the NRHP in 1982. Alterations include some new windows, some enclosed windows, a new awning on the second floor, and a modern exterior staircase. The hospital is NRHP eligible under Criterion A in the Area of Ethnic Heritage, the modern windows, awnings and exterior stairwell do not impact the building's integrity of location, association, feeling, design, and setting.

The Houston Negro Hospital was the first non-profit hospital for black patients in Houston and hired only black physicians. Per the master plan the one-block site originally would have contained multiple buildings. The hospital was the first building constructed, followed by the nursing school and two minor buildings (now demolished). An additional four buildings were never built.

Description: The Houston Negro Hospital School of Nursing is a two-story building in the Spanish Colonial Revival style constructed of reinforced concrete and hollow tiles with an exterior of stucco. The school was the first educational institution created for the training of black nurses in Houston. Local architect Maurice J. Sullivan designed the building. Alterations include enclosed windows. A sign in front of the structure states the building will be the future headquarters for Harris County Public Health.

The School of Nursing retains integrity of design, workmanship, setting, location, feeling, and association.

Resource No.	S3 27	Address:	3108 Ennis Street
Resource Type:	Building	Function/Use:	Commerce/vacant, not in use
Estimated Year built:	C. 1922	References:	www.historicaerials.com
NRHP Eligibility:	Contributing to the NRHP eligible Third Ward Historic District, but the building is not individually eligible		

Description: This parcel has two, one-story brick buildings that have been connected. Alterations include painted brick, enclosed windows and doors, thus changing the fenestration.

The buildings have been painted with art representing the Black Lives Matter movement, including the acronym painted above the awning, and a mural of George Floyd on the south façade.

Houston's METRO Bus Rapid Transit (BRT) University Line
Historic Resources Windshield Survey (cut-off date 1977)
Segment 3
Surveyed January 2023
Surveyors: Cherise Bell and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S3 28	Address:	3115 Ennis Street
Resource Type:	Building	Function/Use:	Commerce/vacant, not in use
Estimated Year built:	C. 1922	References:	www.historicaerials.com
NRHP Eligibility:	Contributing to the NRHP eligible Third Ward Historic District, but the building is not individually eligible		

Description: A two-story, two-part brick building. Alterations included painted brick, enclosed openings, and a loss of awnings and balconies. Murals on the building represent people whose death has sparked action amongst the Black Lives Matter movement. The building contributes to the district as an early commercial structure serving the local community and part of a cluster of commercial buildings at this intersection.

According to historic aerial photographs, in 1957 Elgin Avenue dog-legged at 3115 Ennis avoiding buildings and vegetation located south of the subject building. Parking for the building was on the east side. By 1962, the dogleg was straightened, and the subject building directly parallel to the road and the previous buildings and vegetation were gone as their space was occupied by the road. Parking moved to the south side of the building parallel to Elgin Avenue. The parking spaces are not an integral part of the setting.

APPENDIX D – Segment 4

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 01	4445 Gulf Freeway	No	C. 1967	None	Commerce/business	Alterations include modern windows and siding, plus a change in the fenestration and a side addition.
S4 02a/b	2000 Ernestine Street	No	C. 1970	New Formalism influence	Commerce/warehouse	Alterations include an addition to south façade has no pilasters or pebbledash. Two skywalks connect warehouse S4 02a to warehouse S4 02b. The addition on S4 02a has no siding or pilasters.
S4 03	4443 Pease Street	No	C. 1935	Tudor influence	Domestic/single dwelling	Alterations include modern windows and an enclosed front porch. A ten-foot privacy wood fence abuts part of the front, and the side-yard changes the original setting.
S4 04	4442 Leeland Street	No	C. 1930	Tudor	Domestic/single dwelling	Alterations include a side patio with a half-wall of brick and a metal roof supported by metal columns.
S4 05	619 Telephone Road	No	1977	None	Government/fire station	Does not meet Criteria significance
S4 06	4443 Leeland Street	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include vinyl siding in the gable ends and eaves, modern windows, and extra columns.
S4 07a/b	4444 Bell Street	No	C. 1955	None	Domestic/multiple dwelling	Alterations include modern windows, changes to the central entrance, and a roof over the rear stairs.
S4 08	420 Telephone Road	No	C. 1947	None	Social/meeting hall	Alterations include several flat roof additions on the south façade and a flat roof addition on the west façade, plus additional bricked up windows.
S4 09	4501 Clay Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include the window in the front eaves which has been enclosed with plexiglass, and the one-car garage in the rear yard has modern pressboard siding.
S4 10	4603 Clay Street	No	C. 1935	Colonial Revival	Domestic/multiple dwelling	Eastwood Plat. Alterations include the brick has been painted.
S4 11	4602 Polk Street	No	C. 1935	Colonial Revival	Domestic/multiple dwelling	Eastwood Plat. Alterations include three dormer windows.
S4 12	4601 Polk Street	No	C. 1935	Minimal Traditional	Domestic/single dwelling	Eastwood Plat. Alterations include modern siding, spindle columns, door, and windows, plus a side addition. There is a detached garage with carport in the rear yard.
S4 13	4603 Polk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows, front door, siding, and a new front porch. Based on exposed rafters on the east façade, an original side porch was enclosed.
S4 14	4602 Woodside Street	No	C. 1948	Ranch (6-plex)	Domestic/multiple dwelling	Eastwood Plat. Alterations include modern windows, doors, balcony railing, and front yard fencing. Apartment complex built after WWII.
S4 15	4550 Woodside Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include an enclosed rear porch.
S4 16	4547 Woodside Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern columns for the porte-cochere.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 17a/b	4601 Woodside Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern siding, painted brick, and a large, rear addition.
S4 18	4539 Park Drive	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. The building appears to be intact.
S4 19	4540 McKinney Street	No	C. 1935	Four-plex apt bldg	Domestic/multiple dwelling	Eastwood Plat. Alterations include painted brick, modern doors, a replacement awning, and modern windows. The side yard has a metal privacy fence that parallels S. Lockwood Drive.
S4 20	4602 McKinney Street	No	C. 1923	Four-Square	Domestic/multiple dwelling	Eastwood Plat. There were no obvious alterations.
S4 21	4601 McKinney Street	No	C. 1930	Four-Square	Domestic/single dwelling	Eastwood Plat. Alterations include a modern door, windows, porch columns, fenestration change on east façade, modern dormer windows, and an addition on the east facade.
S4 22	4539 McKinney Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include painted brick columns, a modern door, imbrication in the gable end, and a loss of railing.
S4 23	4602 Walker Street	No	C. 1955	Apt block	Domestic/multiple dwelling	Eastwood Plat. Alterations include modern windows and a six-foot metal fence. Apartment complex built after WWII.
S4 24	4601 Walker Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Noncontributing. Alterations include modern siding, some modern windows, and a chain-link fence in the front yard.
S4 25	4604 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows and front door.
S4 26a	4542 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows and doors, plus a change in the fenestration.
S4 26b	4542 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows, door, porch, and columns, plus a change in the fenestration.
S4 27	4545 Rusk Street	No	C. 1950/2001	Ranch	Domestic/single dwelling	Eastwood Plat. Alterations include a siding, windows, front porch railing, windows in gable end, and a horizontal wood fence in the front yard.
S4 28	4609 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include new siding, a modern door, a six-foot metal fence in the front yard, and modified gable ends.
S4 29	4619 Harrisburg Boulevard	No	C. 1930/1992/2009	Mission Revival	Commerce/specialty store	Gas station. Alterations include a change in the fenestration and two side additions on the west façade.
S4 30	311 Lockwood Drive	No	C. 1976	None	Commerce/specialty store	Alterations include modern materials on the canopy and eaves. Detached canopy over gas pumps added after 1985.
S4 31	304 Lockwood Drive	No	1935/2008	None	Commerce/specialty store	Alterations include loss of a front porch, modern windows and doors, and changes in the fenestration and siding.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 32	302 Lockwood Drive	No	C. 1970	None	Commerce/ warehouse	Alterations include an addition with a carport has been added to the north façade.
S4 33a/b	220 Lockwood Drive	No	C. 1955	None	Commerce/warehouse	Alterations include a one-story metal carport that has been added to the full-length of the east façade and a modern office building in the southwest corner of the lot (S4 33b).
S4 34	213 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern doors, windows, and a rear addition. There is a detached metal carport in the side yard.
S4 35	211 Lockwood Drive	No	1936/2012	Minimal Traditional	Domestic/single dwelling	Alterations include modern siding, columns, a door, windows, and a metal fence in the front yard. A metal carport is attached to the south façade.
S4 36	209 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, an enclosed front porch, and a change in the fenestration.
S4 37	207 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, windows, a change in the fenestration, the front door, columns, the railing, and a metal fence in the front yard. A large two-story building was added to the rear façade.
S4 38	205 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern columns and a new front porch railing.
S4 39	203 Lockwood Drive	No	C. 1920	Craftsman	Domestic/vacant-not in use	Alterations include modern columns, a side porch railing, windows, and brick wainscot. Remodeling of the house was occurring when the house was surveyed.
S4 40	202 Lockwood Drive	No	C. 1956	Contemporary influence	Commerce/vacant-not in use	Alterations include modern metal siding, a change in the fenestration, painted brick on the front façade, a modern door, and a rear addition.
S4 41	113 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern windows, new siding, an enclosed porch, missing columns and railings, south and rear additions, plus a change in the fenestration.
S4 42a/b	109 Lockwood Drive	No	1940/2018	Bungalow	Domestic/multiple dwelling	Alterations include modern siding, doors, windows, a front yard privacy fence, and change in the fenestration.
S4 43	110 Lockwood Drive	No	C. 1935	None	Commerce/warehouse	Alterations include modern windows, siding, doors, garage door, a metal roof, and the stepped parapet, plus a change in the fenestration. A metal carport is attached to the south façade.
S4 44	102 Lockwood Drive	No	1936/2011	Colonial Revival	Domestic/multiple dwelling	Alterations include modern siding, windows, and a front door, plus a rear addition and a change in the fenestration.
S4 45	4617 Brady Street	No	1915/2021	Folk Victorian influence	Domestic/single dwelling	Alterations include a new front façade and porch, modern windows, a change in the fenestration, and a metal fence in the front yard
S4 46a	4703 Brady Street	No	C. 1935	Gothic influence	Domestic/single dwelling	Alterations include a modern porch, door, and windows.
S4 46b	4703 Brady Street	No	C. 1935	Bungalow	Domestic/single dwelling	Alterations include a modern metal staircase, boarded up windows, and doors that change in the fenestration.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 47	99 Lockwood Drive	No	C. 1938	Minimal Traditional	Domestic/single dwelling	Alterations include modern siding, a door, windows, and front porch columns, plus a change in the fenestration.
S4 48	93-97 Lockwood Drive	No	C. 1973	None	Commerce/specialty store	Alterations include modern siding, a new canopy, and rooftop signs.
S4 49	94 Lockwood Drive	No	1925/1955	Bungalow	Domestic/single dwelling	Alterations include a new front façade that changes the look and feel of the house, and a detached garage in the rear yard.
S4 50	4616 Canal Street	No	1977/2018	None	Commerce/specialty store	Alterations include a modern façade, siding, roof, windows, and a change in the fenestration.
S4 51	91 Lockwood Drive	No	C. 1973	None	Commerce/specialty store	Alterations include modern siding, windows, and door, plus a change in the fenestration.
S4 52	4719 Canal Street	No	C. 1950/2000	None	Religion/religious facility	Alterations include modern siding, windows, architectural ornamentation on the frieze, a rooftop sculpture, and a metal fence with stone columns.
S4 53	215 Lockwood Drive	No	C. 1920	None	Commerce/warehouse	Alterations include metal siding on the north façade, a rear metal canopy addition, a bricked-up door and window, and a change in the fenestration.
S4 54	4707 Avenue I	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include modern siding, windows, and a door, a small rear addition, plus a change in the fenestration change.
S4 55	301 Lockwood Drive	No	C. 1935	Minimal Traditional	Domestic/single dwelling	Alterations include a modern door, windows, and a column plus a change in the fenestration. There have been multiple rear additions and a carport has been added to the rear façade. The metal sheeting on the side yard and the metal and wood fence in the front yard changes the setting.
S4 56	303 Lockwood Drive	No	C. 1930	Minimal Traditional	Domestic/single dwelling	Alterations include modern: windows, a front door, and a new front porch.
S4 57	305 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, a front porch, windows, a door, and a change in the fenestration.
S4 58	307 Lockwood Drive	No	C. 1920	Craftsman	Domestic/multiple dwelling	Alterations include modern siding, windows, and a porch railing.
S4 59	335 N Burr Street	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include modern columns, railing, windows, siding, and an attached carport to the south façade.
S4 60	333 Lockwood Drive	No	C. 1978	New Formalism	Government/courthouse	Harris County Courthouse Annex 39. Alterations include bricked up openings thus changing the fenestration.
S4 61	4619 Navigation Boulevard	Yes	1939	Art Deco influence	Industry/manufacturing facility	Alterations include bricked-up windows on the first floor changing the fenestration and new windows on the second floor. Interior rooms and materials are mostly intact.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 62	601 Lockwood Drive	Yes	1948	Art Deco	Government/government offices	Alterations include the entrance door and sidelights and some modern windows.
S4 63	Lockwood @ Armour Dr	No	C. 1975	Water Treatment Plant	Government/vacant - not in use	Not Eligible: lacks integrity of materials, design, workmanship, and association.
S4 64	750 Lockwood Drive	No	1950	Quonset Hut	Industry/manufacturing facility	Per Mr. Zaveri, office manager, the flat roof warehouses indicate the portion of the building reconstructed after a fire.
S4 65a-f	865 Lockwood Drive	No	C. 1953/1973	None	Industry/manufacturing facility	Alterations include modern windows, awnings, a roof, and a door, plus a rear addition attaching the office to the warehouse.
S4 66a-d	900 Lockwood Drive	No	C. 1953/1970	None	Industry/manufacturing facility	Alterations to the office include modern windows. The warehouses have had multiple additions through the years thus changing design and setting.
S4 67	951 Lockwood Drive	No	C. 1953/1957	None	Commerce/vacant-not in use	Alterations include the front addition, a modern garage door, missing windows, and a change in the fenestration.
S4 68	5515 Clinton Drive	No	C. 1936/1965	None	Commerce/warehouse	Alterations include a two-story rear façade and multiple additions on the east façade.
S4 69	1010 Lockwood Drive	No	C. 1942	None	Commerce/warehouse	Alterations include a new side porch and modern windows.
S4 70	1020, 1040, and 1060 Lockwood Drive	No	C. 1975	None	Commerce/warehouse	Alterations some modern loading docks and windows, plus a change in the fenestration.
S4 71	1025 Lockwood Drive	No	1926/2014	None	Industry/manufacturing facility	Alterations to the office include modern siding, windows, and awnings. Alterations to the warehouses include covered windows and openings, a modern roof (c. 2014 and 2016), and a change in the fenestration.
S4 72a/b	1111 Lockwood Drive	No	1956/1968	None	Industry/manufacturing facility	Alterations include an addition to the south façade. A modern raised parapet covers the front facade of two gable-roof warehouses removing integrity of materials, and design. The addition of new buildings reduces integrity of setting.

Description: A one-story fire station with office/living space and four bays of no particular style. The original Station #18 was constructed in 1926. In 1976, Station #18 was temporarily relocated as the old station was demolished and a new facility was being constructed. The building plaque has the year of construction as 1977 and the architect of record as T. Leo Dawsy Jr. Station #18 returned to 619 Telephone Road in 1980 (https://houstontx.gov/fire/about/history.html).

T. Leo Dawsy, Jr. (1925-2006) served as a pilot in the Army Air Corps during WWII. He studied architecture at Auburn University, graduated in 1951 and moved to Texas in 1961. Dawsey operated his own firm until his death in 2006.

Estimated Year built:	C. 1955	References:	HCAD, www.historicaerials.com
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and workmanship		

Description: Resource S4 07 consists of two, two-story multi-family apartment block buildings. Resource S4 07a has brick siding, deep overhanging eaves, and three pedestrian doors on the front facade that face Bell Street. Alterations include modern windows, changes to the central entrance, and a roof over the rear stairs. Resource S4 07b is an apartment with wood siding and a central entrance facing Ernestine Street. The building form, backyard location, and window types indicate the first building could have originally been a garage apartment.

Estimated Year built:	C. 1978	References:	www.historicaerials.com
NRHP Eligibility:	Not Eligible: Lacks integrity of materials, design, and association		

Description: Harris County Courthouse Annex 39 is a two-story building with a flat roof and brick siding influenced by the New Formalism style. Changes in brick color indicated two openings, a door on the south façade, and a window on the east façade, that have been bricked up. Currently used as a courthouse annex, a county employee stated she thought it originally was a financial institution (savings and loan). The lot was vacant in 1976 and the building appears in a 1981 aerial photograph (www.historicaerails.com). The first identified listing in city directories was 1983 for a labor union office. Alterations include bricked up openings thus changing the fenestration and reducing integrity of design and materials.

Resource No.	S4 61	Address:	4619 Navigation Boulevard
Resource Type:	Building	Function/Use:	Industry/manufacturing facility
Estimated Year built:	1939	References:	HCAD, Sanborn Map, Interview with current owner
NRHP Eligibility:	Eligible: Under Criterion A, Commerce at the local level of significance		

Description: International Harvester Co. Motor Truck & Farm Machinery Sales & Service (Sanborn Map). A two-story warehouse with brick siding. Per Sanborn, steel frame – tile, BF [Brick Face] curtain walls. The stock room is full of W.G. skylights that still exist and work today.

The International Harvester Houston Branch house represents the thriving economy of Houston and the investment of international firms into the economy during the Great Depression (1929-1941). Houston Branch house is recommended eligible under Criterion A, in Commerce at the local level of significance. No evidence was discovered, at the reconnaissance level, connecting the building to an architect or architectural firm. Historians identified three IHC buildings constructed in 1939, each different; therefore, IHC did not have a standard building for their Branch House (IHC 1939: 30). IHC is recommended not eligible under Criterion B. The building is designed in the Art Deco style with curved concrete coping, brick siding, and an exposed concrete base. The massing is a two-story horizontal block flanked by one-story wings on either side. The central entrance extends above the two-story roof line with stepped corbeling around the original main entrance. The original windows on the front and side facades have been bricked up with several sets of windows converted to openings with a garage door. The original recessed front entrance is bricked-up and flush with the front façade. Other windows on the side façade and replaced with smaller windows and boards. Based on the alterations the building lacks integrity of materials and workmanship and is recommended not eligible under Criterion C.

NRHP Eligibility:	Eligible: Criterion A, Commerce at the local level of significance		

Description: Western Electric Company (WE)/Southwestern Bell Telephone Company originally owned this building. Western Electric Manufacturing Company was established in Chicago in 1872. Alexander Graham Bell invented the phone in 1876 and the American Bell Telephone Company (Bell) was formed in 1877. WE manufactured Bell's telephones and by 1925 was a subsidiary of Bell (www.westernelectric.com). Austin Method Engineers and Builders constructed the building (AT&T archives).

The two-story brick building features a rectangular plan. Metal casement windows create a horizontal banding on the facades. The Art Deco entry has curved edge and glass brick windows. There are four loading bays on the south façade. Per Sanborn, the building has steel frame columns and beams, concrete floor, steel deck roof, and curtain walls with fireproof construction except where noted. Alterations include the entrance door and sidelights and some modern windows.

Surveyed July 2022
Surveyors: Cherise Bell and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S4 64	Address:	750 Lockwood Drive
Resource Type:	Building	Function/Use:	Industry/Manufacturing facility
Estimated Year built:	1950	References:	*Houston Chronicle*, July 9, 1950, p. A29
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and workmanship		

Description: A Quonset hut clad with permastone. The Quonset hut is attached to a large warehouse. The warehouse contains a flat roof portion and seven barrel-roof sections. Per Mr. Zaveri, office manager, the flat roof warehouses indicate the portion of the building reconstructed after a fire. The original owner of the building was National Steel Products Company.

Historic Resources Reconnaissance Survey (cut-off date 1977)
Segment 4
Surveyed July 2022
Surveyors: Cherise Bell and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S4 65a-f Texas Iron & Metal	Address:	865 Lockwood Drive
Resource Type:	Building	Function/Use:	Industry/manufacturing facility
Estimated Year built:	C. 1953/1973	References:	Google Earth, www.historicaerials.com
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, workmanship, and setting		

Description: A parcel with multiple warehouses and an office building. Buildings S4 65a, b and c (the office and both triple-barrel roof Quonset huts) were in place by 1953. The expansion, loss, and addition of new buildings changed the setting and relationship between the buildings.

S4 65a is an office attached to a warehouse forming an "L" plan. Alterations include modern windows, awnings, a roof, and a door, plus a rear addition attaching the office to the warehouse. Buildings S4 65b and S4 65c are triple barrel Quonset huts. Alterations include painted siding, enclosed bays, modern doors, and a change in the fenestration. S4 65d was constructed by 1973 and doubled in size by 1981. The addition either encased or replaced a building to the north. S4 65e was constructed by 1976 and has a large rear addition by 1981. S4 65f was constructed between 1981 and 1995 and is not of historic age.

Per the owner, this family-owned business has been at this same location since the 1950s.

Segment 4
Surveyed July 2022
Surveyors: Cherise Bell and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S4 72a/b	Address:	1111 Lockwood Drive
Resource Type:	Building	Function/Use:	Industry/manufacturing facility
Estimated Year built:	C. 1956/1988	References:	Google Earth, HCAD
NRHP Eligibility:	Not Eligible: not significant under NRHP Criteria, lacks integrity of materials, design, and setting		

Description: A parcel containing one brick office building (S4 72a) connected to multiple metal warehouses (S4 72b). The one-story office is a Contemporary style building with a winged gable roof, winged end walls, brick siding, and a horizontal band of windows at the eave line. Alterations include an addition to the south façade. Per HCAD construction dates for the warehouses are: 1981, 1960, 1956, 2006, 1960, 1980, 1960, 1988, 1960, 1960, and 1960. Per HCAD there are two office buildings, both dated 1980.

A modern raised parapet covers the front facade of two gable-roof warehouses removing integrity of materials, and design. The addition of new buildings reduces integrity of setting.

Surveyors: Cherise Bell and Erica Koteras, AmaTerra Environmental, Inc.

Resource No.	S4 74	Address:	1120 Lockwood Drive
Resource Type:	Building	Function/Use:	Commerce/warehouse
Estimated Year built:	C. 1950/1990	References:	Google Earth, HCAD
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and setting		

Description: Per HCAD there are three metal warehouses and two distribution warehouses constructed 1950, 1960, 1990, 1990, and 1960 respectively. Based on visual inspection all the warehouses are connected. The warehouse closest to Lockwood Drive is a one-story brick building with a flat roof. Alterations include enclosed bays and modern windows. The warehouses are common designs and have no unique construction method or technology. The inclusion of the 1990 modern warehouses changes the setting.

Resource No.	S5 80a/b	Address:	4114 Lockwood Drive (per HCAD)
Resource Type:	Building	Function/Use:	Domestic/single dwelling
Estimated Year built:	C. 1944/1970	References:	HCAD, www.historicaerials.com
NRHP Eligibility:	Not Eligible: lacks integrity of materials, design, and setting		

Description: This parcel contains two buildings. A one-story Ranch style house with brick siding (S5 80a) and a one-story house with pyramid roof and wood siding (S5 80b) in the rear yard. Per HCAD both buildings were built in 1948 and the building uses include residential and as a warehouse. Both buildings appear on the 1944 Google Earth aerial. Based on the massing and windows Resource 80a has been completely remodeled. Alterations include modern windows and a change in the fenestration. A ten-foot metal fence and removal of grass in the front yard changes the setting.

Resource 80b is a one-story Minimal Traditional style house with wood siding. Visibility is limited due to vegetation and Resource 80a, but it appears to have replacement windows and a replacement metal roof, impacting integrity of materials, workmanship, and design.

Resource No.	S5 103 Kashmere Gardens Elementary School	Address:	4901 Lockwood Drive
Resource Type:	Building	Function/Use:	Education/school
Estimated Year built:	1949	References:	HCAD, www.houstonisd.org, plaque
NRHP Eligibility:	Recommended eligible under Criterion A in the area of Social History, Civil Rights Movement		

Description: Kashmere Gardens Elementary School was established in 1949 as a segregated, all-white school. Alterations include modern siding, doors, metal roofs, and covered walkways. Desegregation started in 1960 when 12 Black children attended the school. Tyronne Raymond Day was admitted and attended the elementary school on September 8, 1960. He was the first Black child to attend an all-White school in HISD. Because of this, Kashmere Gardens Elementary is recommended eligible under Criterion A at the local level in the area of Social History, Civil Rights Movement. By 1984 the school was fully desegregated (www.targethunger.org). These students were not the first to force the issue of desegregation. Delores Ross went to Sherman Elementary School and Beneva Williams went to McReynolds Middle School in 1956 (Bryant 2004). Since the twelve kids at Kashmere were not the first students to attend an all-white school after the Brown vs. Board case, Kashmere Gardens Elementary is recommended not eligible under Criterion A.

The historic-age school buildings have brick siding and walls of horizontal windows in the Contemporary Style. Based on architectural features, materials, and historic aerials (1953) originally there were three main buildings and three smaller buildings. Additional buildings were added north of the courtyard circa 1981, 1995, and 2002 (www.historicaerials.com). Covered walkways were added to connect the buildings. Based on the additions the school lacks integrity of materials, design, workmanship, and setting and is recommended not eligible under Criterion C.

Per the cornerstone plaque on the school the supervising architect was Stayton Nunn with Lloyd and Morgan as the architects. Stayton Nunn got a BS in Architecture from Rice University, he worked for architectural firms, started his own partnership, and taught at Rice University and Is best known for the River Oaks Community Shopping Center. He worked for Houston Independent School District from 1946-1958. (https://av.lib.uh.edu/media_objects/44558d349). Hermon Lloyd graduated from Rice University and teamed with another Rice architectural student Harvin Moore. Their firm designed over 84 houses in Rivers Oaks. After WWII Lloyd partnered with W.B. Morgan. Rice alumni Arthur Jones joined the firm in 1947 and became a partner in 1962 making the firm's name Lloyd Morgan Jones (Koush 2017). The firm became well known in Houston and designed over 2,000 projects.

Estimated Year built:	1971	References:	Plaque, www.findagrave.com
NRHP Eligibility:	Not eligible as building does not rise to the level of significance necessary for NRHP		

Description: Kashmere Garden Branch Public Library built in 1971 in the New Formalism style as evident in the wide overhanging eaves supported by oblong concrete columns set on a raised concrete foundation. The fluted columns have a cut away base giving the feeling of floating columns while the fluting matches the pattern of wood of the frieze. The architect was Don J. Tomasco and Associates with B.D.G. & Inc. as general contractor. There are no obvious alterations.

"Mr. Tomasco again attended the University of Houston, where he received his fifth year Master's Degree in architecture while also working for the architectural firm of Wilson, Morris, Crain and Anderson, AIA. He became a Registered Architect in the State of Texas in 1961, continuing his practice as an architect and later as a contractor and as a real estate investor/developer. He became a licensed Texas Real Estate Broker in the mid-60's and was a long-standing member of the American Institute of Architects. He became a Texas Registered Interior Designer in February of 1993. Mr. Tomasco began his architectural and construction business in 1957 on a part-time moon-lighting basis" (https://www.findagrave.com/memorial/36680240/donald-joe-tomasco). Donald Joe Tomasco was born in 1931 Houston, Texas, and died in Houston, Texas in 1997. https://www.ancestry.com/genealogy/records/donald-joe-tomasco-24-1kxbmp8

Section 106 Historic Resources Survey Addendum

Technical Report
September 2023

METRO NEXT

Abstract

This report provides an Addendum to the *History Survey Report* (May 2023), circulated to consulting parties and the Texas Historical Commission (THC) on May 29, 2023, and responds to comments received from consulting parties, including those of THC. This Addendum has also been provided to consulting parties as the FTA determinations have been updated based on consulting party input.

In its review of the *History Survey Report*, (May 2023) THC made the following comments:

- Eastwood Subdivision is an eligible historic district under Criteria A in the area of Community Planning and Development as an intact streetcar suburban neighborhood and Criteria C for at the local level in the area of Architecture, given the subdivision's collection of early Craftsman and Bungalow style houses and other early twentieth century styles common in America, with boundaries generally corresponding to the original subdivision plat;
- Additional information regarding property acquisitions was needed to examine effects for the Third Ward Historic District; and,
- Evergreen Negro Cemetery should be treated as eligible for listing in the National Register.

This Addendum assumes eligibility for the Eastwood Subdivision Historic District, provides additional information regarding the historic context for the Eastwood Neighborhood to aid in applying the criteria of adverse effect, and the requested right-of-way (ROW) information for the Third Ward Historic District. This Addendum also provides details on design modifications to minimize effects within the historic districts and the Evergreen Negro Cemetery. The addendum identifies conditions by which the project design will be modified to support a No Adverse Effect.

1.0 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

1.1 Purpose of this Addendum

The purpose of this Section 106 Historic Survey Report Addendum is to respond to consulting party and Texas Historical Commission (THC) comments dated June 29, 2023 (**Appendix A – Consulting Party Input**).

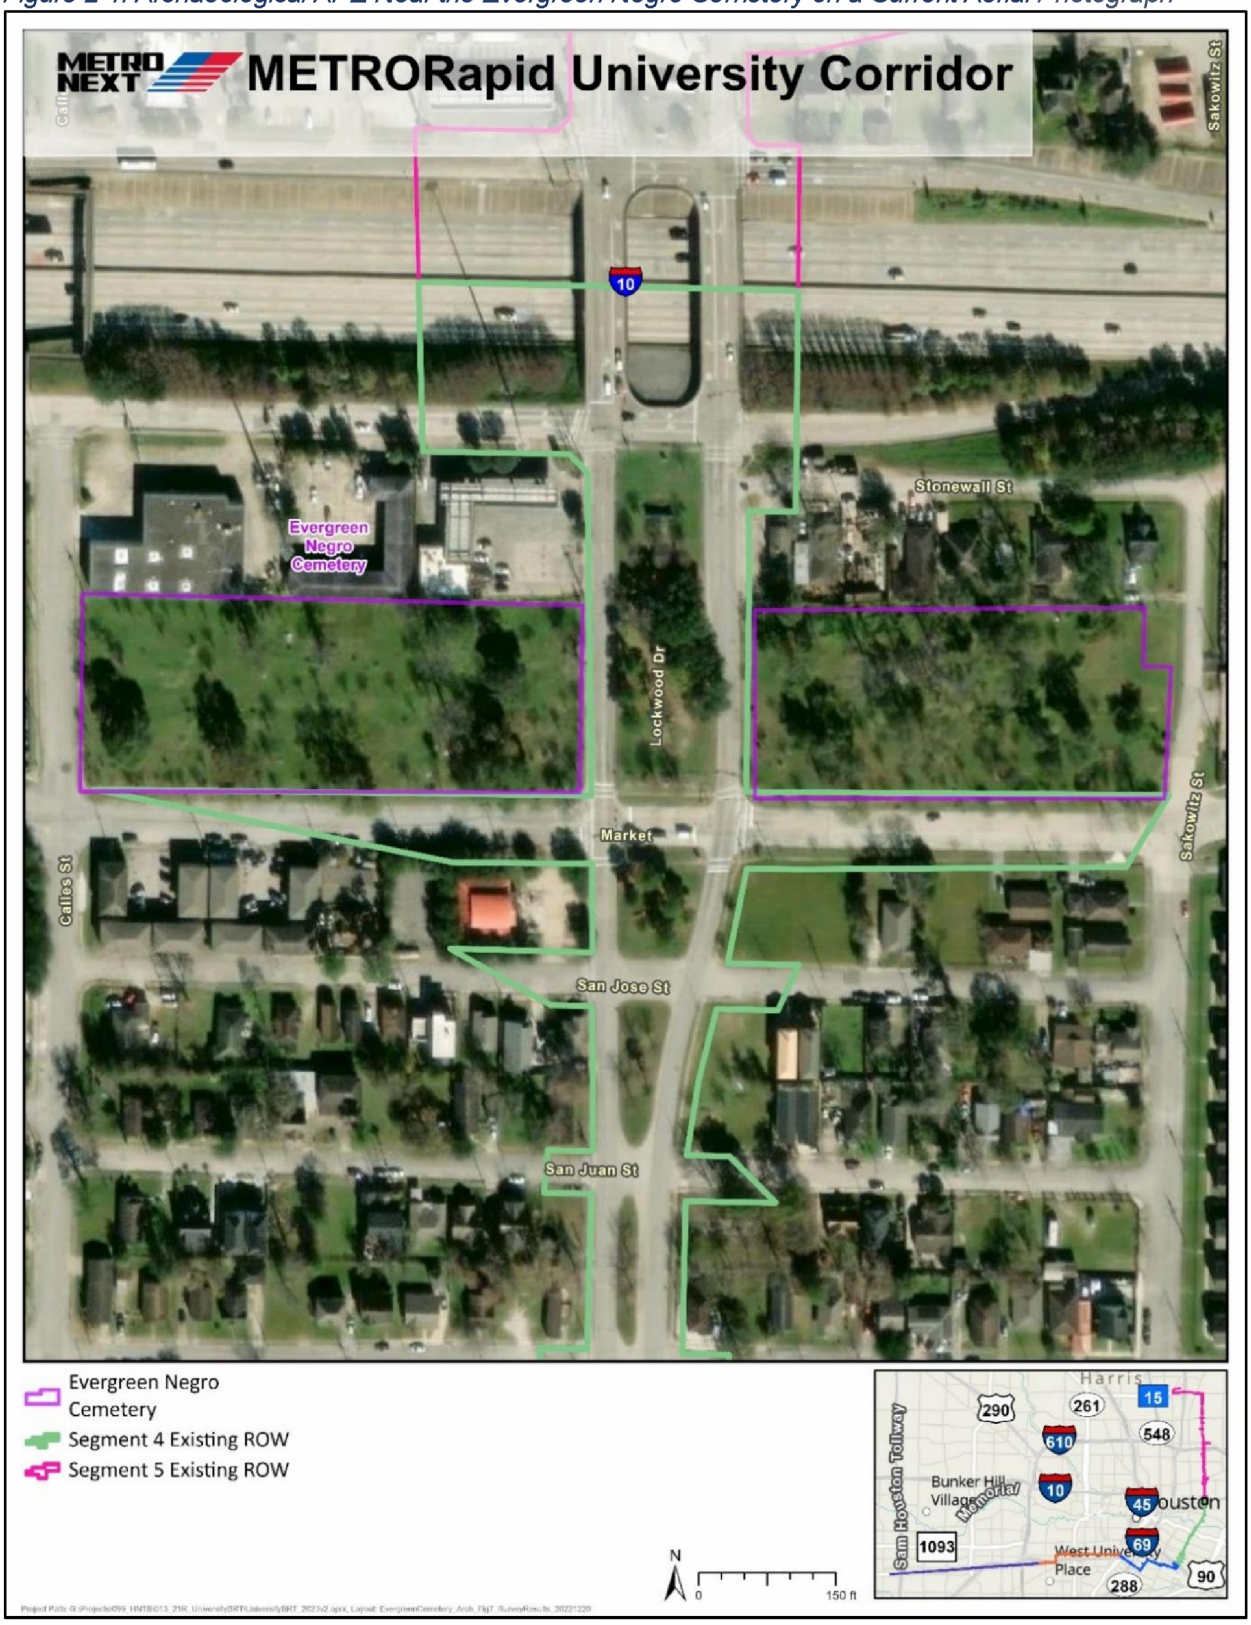
Specific THC comments addressed in this report include:

- Eastwood Subdivision is an eligible historic district under Criteria A in the area of Community Planning and Development as an intact streetcar suburban neighborhood and Criteria C for at the local level in the area of Architecture, given the subdivision's collection of early Craftsman and Bungalow style houses and other early twentieth century styles common in America, with boundaries generally corresponding to the original subdivision plat;
- Additional information regarding property acquisitions was needed to examine effects for the Third Ward Historic District; and,
- Evergreen Negro Cemetery should be treated as eligible for listing in the National Register.

This addendum focuses on the specific THC comments on the May 2023 *Historic Survey Report* and does not repeat information agreed upon and concurred with by the THC, including:

- Segment 1 - All resources surveyed are not eligible for the National Register.
- Segment 2 - Individually eligible resources are: 1836, 3336, 3334, 3323, 3322, 3311, 3121, and 3101 Richmond Avenue under Criterion C for architecture. Richmond Avenue Modern Commercial Historic District is no longer eligible due to a loss of historic integrity and that all other resources surveyed in the segment are not eligible.
- Segment 3 – The Houston Negro Hospital and the School of Nursing Building remain eligible and that the Former Albert Sidney Johnson Jr. High School and the Third Ward Historic District remain eligible. And that all other resources surveyed are not eligible for listing.
- Segment 4 – International Harvester Company Building and the Western Electric Company Building are eligible for listing under Criterion C for their architecture. And that all other resources surveyed are not eligible for listing.
- Segment 5 – Kashmere Gardens Elementary School is eligible for listing under Criterion A for Social History and that all other resources surveyed are not eligible for listing.

The addendum provides updates to the project based on input received throughout the Section 106 process as well as the general public outreach and in coordination with neighborhood residents and local stakeholders. A copy of the Eastwood neighborhood requests for design considerations and consulting party meeting notes and questions, with METRO's responses, are included in **Appendix A.**



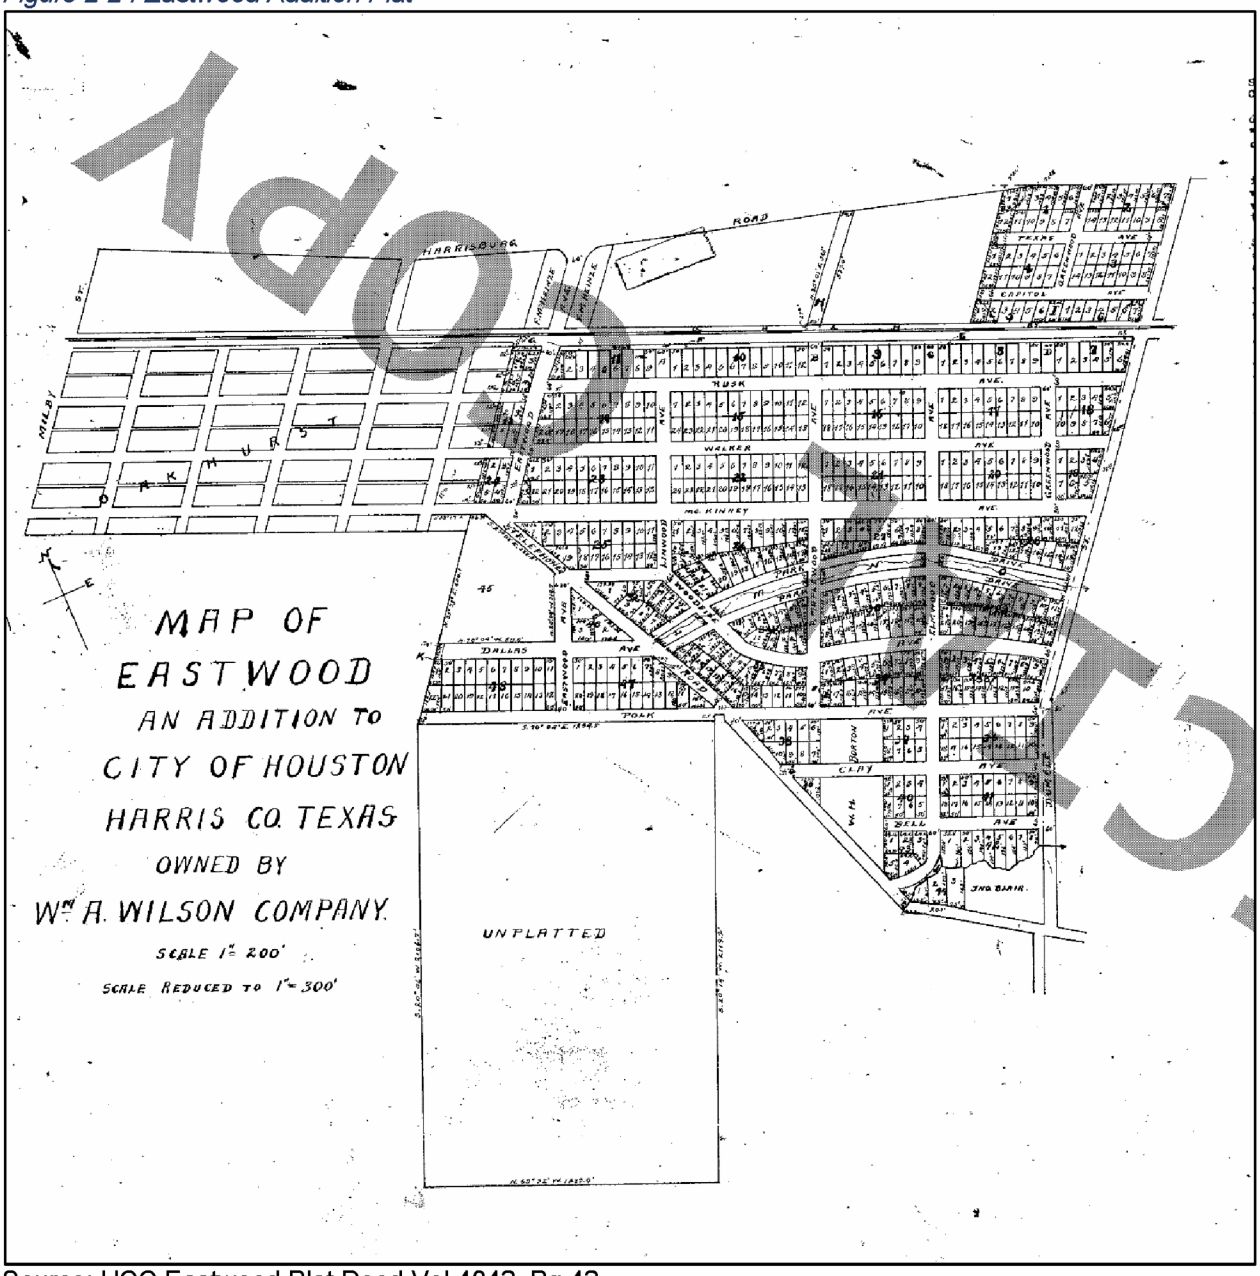
2.0 Historic Cultural Resource Survey Results

A full compilation of resources surveyed within the Area of Potential Effects (APE) are contained in the *Historic Survey Report*, May 2023, for which this report is an Addendum. THC commented that the Evergreen Negro Cemetery should be treated as eligible and that the Eastwood Subdivision is eligible "as the area contains a high concentration of pre-World War II houses with a high level of historic integrity and remarkably little recent construction for a neighborhood so close to downtown Houston. Based on the available information, THC recommends that Eastwood is eligible for listing in the National Register under Criterion A for community planning and development as an intact streetcar suburban neighborhood and under Criterion C for its architecture, with boundaries generally corresponding to the original subdivision plat." This addendum documents FTA and METRO's response in agreement with the THC comments and provide additional supporting documentation to support the agency's revisions to eligibility and determination of effects.

2.1 Evergreen Negro Cemetery

As suggested by the THC, the Evergreen Negro Cemetery will be treated as eligible for the National Register **(Figure 2-1)**. This treatment will provide the cemetery protection under the Section 106 regulations at 36 Code of Federal Regulations (CFR) 800 for construction activities within Lockwood Drive. In the unlikely event that the design changes and acquisitions are needed from the cemetery, consultation requirements will apply in the same manner as if the property were eligible for, or listed in the National Register. The Archeological Work Plan has been updated to reflect this change and to include the THC's direction to complete a 100 percent survey in the Bus Rapid Transit (BRT) lanes.

Figure 2-1: Archaeological APE Near the Evergreen Negro Cemetery on a Current Aerial Photograph



2.2 Eastwood Historic District

THC commented that the Eastwood Subdivision is eligible "as the area contains a high concentration of pre-World War II houses with a high level of historic integrity and remarkably little recent construction for a neighborhood so close to downtown Houston. Based on the available information, THC recommends that Eastwood is eligible for listing in the National Register under Criterion A for community planning and development as an intact streetcar suburban neighborhood and under Criterion C for its architecture, with boundaries generally corresponding to the original subdivision plat." FTA and METRO assume eligibility noting that the subdivision that does retain a high concentration of the pre-World War II houses and it remains intact as a streetcar neighborhood, withstanding subdivision plat changes when Maplewood Drive was widened from 2-lanes to 4-lanes altering the orientation of some homes toward the street. Appendix B of this Addendum provides an updated summary table of Surveyed properties in Segment 4.

Eastwood Residential Subdivision

The W.A. Wilson Company recorded the Eastwood Subdivision plat in 1913. The Eastwood plat, starting at the northwest corner, is roughly bounded by the Union Pacific Railroad (UPRR), Dumble, Leeland, Telephone, Polk, and Sidney streets (**Figure 2-2**). The northeast portion of the plat extended to Harrisburg Road, but the platted lots were not developed and by 1957 the land was a park, today called Eastwood Park (www.historicaerials.com). At Park Drive, the east/west roads are curved to follow a natural ravine. The plat was laid out to take advantage of the natural topography for drainage. The developer laid out the 60 to 80-ft streets with curbing and gutter. Sidewalks (4'-5' wide) were completed on the principal avenues with trees planted in the parkway (buffer area between the curb and sidewalk). Fire plugs were located at every corner, and electrical and telephone poles were placed between blocks at the rear of properties. Land was set aside for a school and social center. The plan did not include alleys as the developer felt they were prone to collect trash (Wilson Company 1912: 3, 4, 6).

Figure 2-2-: Eastwood Addition Plat

Source: HCC Eastwood Plat Deed Vol 4042, Pg 42.

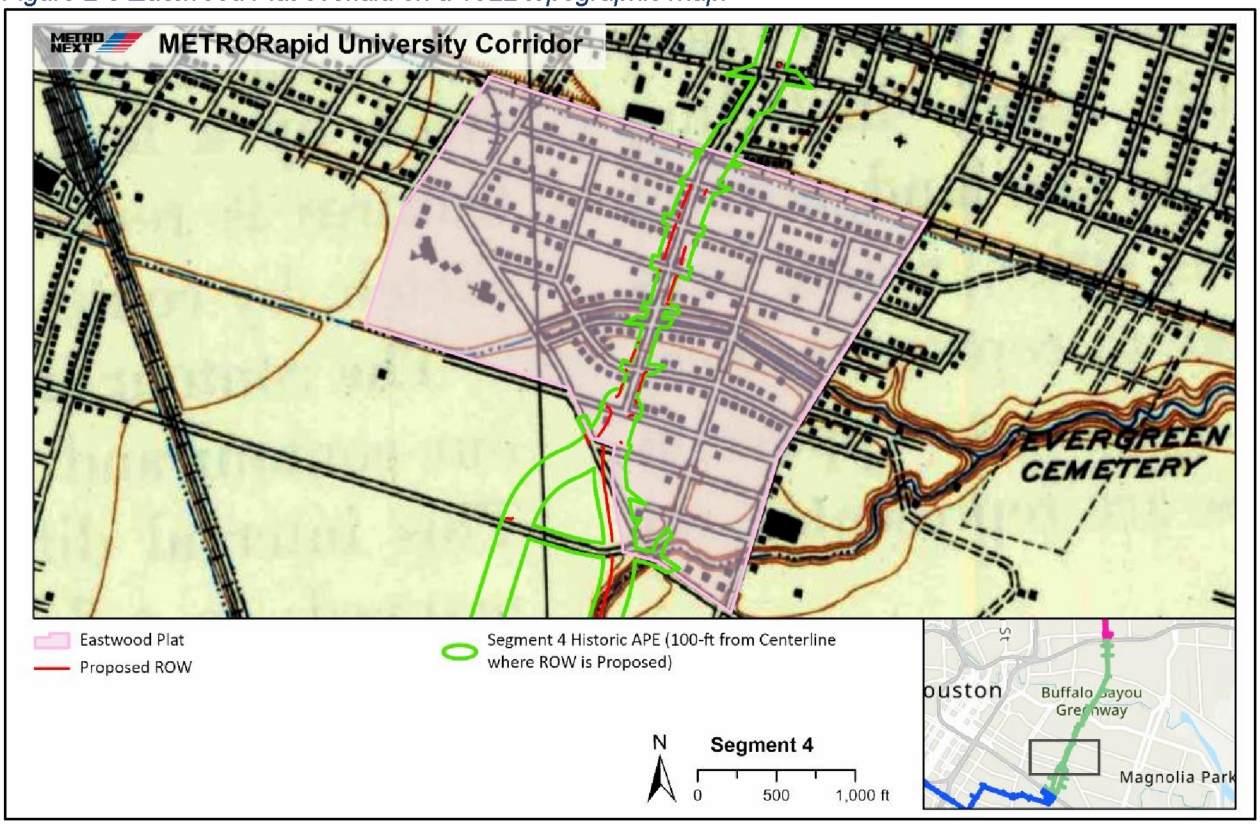
Adopted

The Wilson Company had an architectural department and a law firm to assist with the closing transactions, and it offered financing with monthly payments. Their marketing booklet discusses the benefits of restrictions, citing setbacks, no sale of alcohol, the location of electrical poles regulated to the rear of the property, and the prohibition of constructing tall flats and apartment buildings (Wilson Company 1912: 3, 4, 6). Not stated in the marketing booklet but listed in the plat were the restrictions that no "negroes" could own property. The deed restrictions have been updated and the restriction that no "negroes" could own property has been removed. The deed restrictions continue to retain the residential nature of the neighborhood.

Streetcar Suburb (1888-1928)

The introduction of electrified streetcars in the US spurred development outside of downtowns as one could travel in 10 minutes the distance it took 30 minutes to walk (Ames and McClelland 2002: 17). Streetcar Suburbs were concentrated along radial streetcar lines platted with rectilinear blocks that formed continuous corridors with other platted subdivisions (Ames and McClelland 2002: 20). Eastwood has some rectilinear blocks, was adjacent to and accessible by streetcar, plus McKinney and Polk streets are examples of the continuous corridor. Eastwood Subdivision is an example of a Streetcar Suburb.

The Houston Daily Post declared Eastwood a "model suburb, one of the most convenient, attractive and beautiful homesite additions in the city of Houston" in 1913 (ECA 2022). An advertisement booklet advised prospective buyers the property was two miles east of the courthouse, within the city limits, and accessible by the Harrisburg streetcar line or automobile. The option of transportation modalities represents the transitory period between the eras of streetcar and automobile suburbs. The subdivision was also accessible by auto following Harrisburg Road, which was brick paved to the property at that time, or from McKinney Avenue, which was the principal avenue through the property (Wilson Company 1911: 10).



Eastwood Plat

The Eastwood plat shows lots in a grid pattern between the UPRR and McKinney Avenue. At Park Drive the east/west roads are curved to follow a natural ravine. Streets were 60-ft. wide except for McKinney Street at 80-ft. The subdivision was oriented to Harrisburg Road and to the Harrisburg Streetcar Line. Restrictions prohibited the "erection of tall flats and apartment buildings, which cut off air and sunshine from the adjoining home" (Wilson Company 1912: 7).

Plat Alterations

Two major changes impacted the original design and Wilson's vision of the Eastwood Plat. First, the ravine separating Park Drive was filled in between 1950 and 1953 removing the natural water feature. Historic aerial photographs show the area along Park Drive was retained as a greenspace and trees planted by 2002 (www.historicaerials.com). **(Figure 2-3)**.

Figure 2-3 Eastwood Plat overlaid on a 1922 topographic map.

Source: AmaTerra 2023

Second, the expansion of the automobile and the termination of the Harrisburg Streetcar in 1928 led to the alteration of the original subdivision plat and developer plans for Eastwood. Maplewood Avenue was widened from 60-ft to a four-lane divided road, roughly 100-ft, with a median **(Figures 2-4a-4c and Appendix C – Streetscape Photos)**. This changed the road use from a minor neighborhood collector street to a major thoroughfare resulting in a major alteration of the neighborhood traffic circulation. Maplewood was renamed to Lockwood Drive between 1973 and 1976.

Historians estimate about 24 houses were removed to make way for the road project. McKinney Road at 80-ft was designed by the Wilson Company to be the main thoroughfare. The widening of Lockwood Drive to 100-ft and four-lanes made Lockwood Drive the widest street and the main thoroughfare in the plat. Lockwood's esplanade and a modern neighborhood sign reinforce Lockwood Drive as the current main thoroughfare of the neighborhood. Modern intrusions of homes fronting Lockwood Drive have also been a physical change to the neighborhood that altered the original plat and plans.

Figure 2-4a: Aerial Comparison of Plat Alterations, 1953 and 1978

Figure 2-4b: Aerial Comparison of Plat Alterations, 1988 and 2002

Despite the loss of some original buildings, the deed restrictions in the neighborhood have allowed the subdivision to retain its single-family homes and orientation on the interior streets. The layout of the subdivision is still intact although the neighborhood's main thoroughfare changed from McKinney Road to Lockwood Drive. Based on a cursory drive through the neighborhood, historians estimated that more than 51 percent of the houses retain their architectural integrity. The original landscape elements along Maplewood Avenue were removed when Lockwood Drive was constructed in the early 1970s **(See Figures 2-4a-c)** and limited landscaping has been replanted.

Figure 2-4c: Aerial Comparison of Plat Alterations, 2005 and 2023

The original landscape elements of the neighborhood can be seen on interior streets where older trees are evident and are located in what the developer called as “parkways” between the edge of the curb and the sidewalk. (**Figure 2-5**).

Figure 2-5: Pictures of Interior Streetscape (McKinney), existing view of Lockwood Drive Median

Based on the THC comments, FTA assumes the Eastwood Subdivision is eligible under Criterion A, in the area of Community Planning and Development at the local level of significance as an example of a streetcar suburb and because it has a collection of early Craftsman and Bungalow style houses and other early twentieth century styles common in America, Eastwood Subdivision is recommended eligible under Criterion C at the local level in the area of Architecture. See **Figure 2-6** for the boundaries of the Historic District and **Table 2-1** for a list of eligible resources in the Eastwood Subdivision.

Figure 2-6: Map of Eastwood Historic District

Houses

Styles documented in the survey APE included the Craftsman Bungalow, the Four Square and Colonial Revival (**Table 2-1**). Wilson's propaganda booklets specifically discuss the attributes of the Bungalow style (Wilson 1911: 9, 10). In addition to single-family buildings, several two-story apartment buildings were surveyed, Resources S4 10, S4 14, S4 19, and S4 23. Resources S4 14 and S4 23, are Ranch style apartments built later than the initial construction styles when the subdivision was platted. The modern apartment buildings are oriented to Lockwood Drive instead of Woodside and Walker streets, respectively. The orientation to Lockwood Drive, a north/south street, is a deviation from Wilson's original concept "to avoid throwing the rear of one home in the front or side of another home" (Wilson Company 2012: 7).

Historic topographic maps, aerial photographs, and Harris County Appraisal District (HCAD) records were reviewed to determine the number of houses constructed prior to 1945. Historians discovered there was no change to the number of buildings between topographic maps dated 1922, 1932, and 1949 (www.historicaerials.com). County Tax Assessor records had about 30 percent of the houses built prior to 1945 and based on visual desktop inspections the HCAD construction dates were inaccurate. Based on the reconnaissance level survey with the APE capturing only the lots adjacent to Lockwood Drive, historians are unable to determine the percentages of houses that retain architectural integrity. The buildings that were documented are recommended not eligible due to alterations such as replacement of original wood windows, loss of original columns, and additions. The buildings that did retain integrity did not rise to the level necessary for inclusion in the National Register Historic Places (NRHP).

3.0 Effects to Eligible or Listed NRHP Historic Resources

Following the May 2023 Historic Survey Report and input from consulting parties, METRO has refined the design within the Third Ward and Eastwood Historic Districts to avoid and minimize effects and will treat the Evergreen Negro Cemetery as Eligible. The total area of acquisitions data has been updated to reflect these refinements as of July 24, 2023, and maps at a larger scale are provided.

3.1 Segment 3 Effects on Evergreen Negro Cemetery

The Archaeological Work Plan for exhumation and reinternment of burials associated with the Evergreen Negro Cemetery will followed in accordance with the permit requirements from the THC. The Cemetery will be treated as an eligible historic resource and will be included in construction plans as an area that is off-limits for construction activities and workers. Any modifications to project design plans, or departure from the Archeological Work Plan will be coordinated with the THC and Project Respect consulting parties.

3.2 Segment 3 Effect on NRHP Eligible Third Ward Historic District

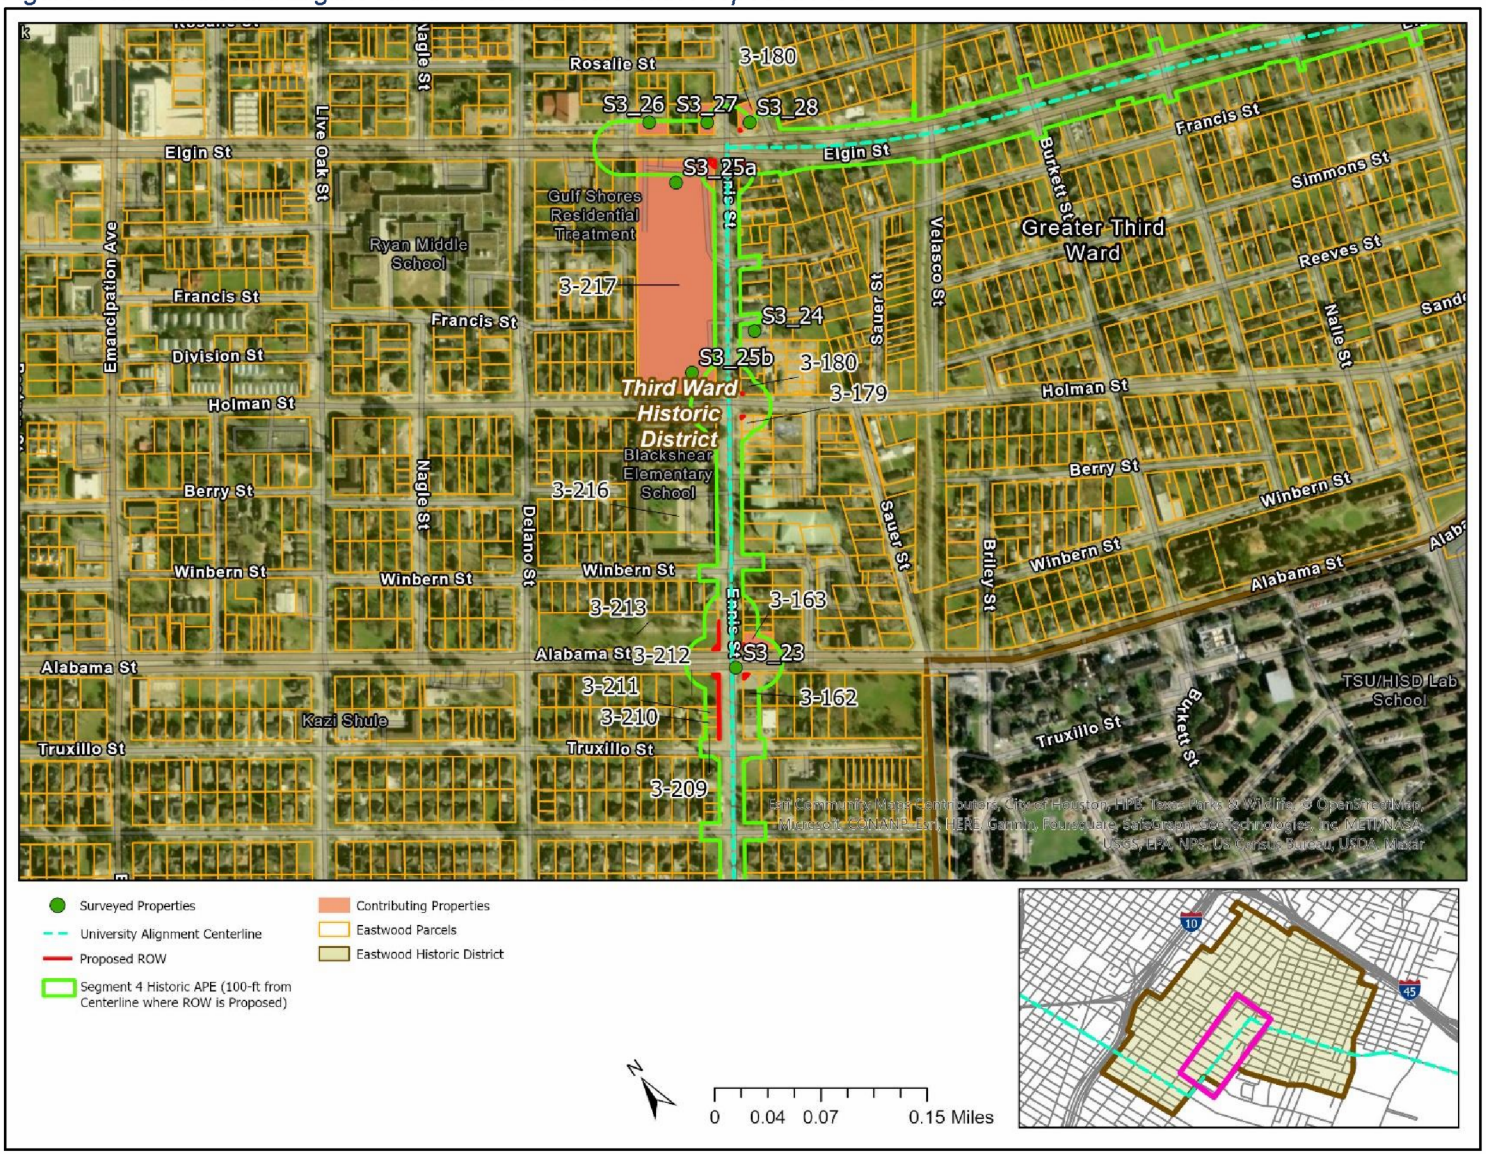
The following section describes property acquisitions within the Third Ward Historic District (district) as requested by the THC to comment on recommended effects determinations. Detail on property acquisitions is provided relative to the contributing resources listed in the THC letter, including 4311 Hutchins Street, 4311 Emancipation Avenue, 2918 Wheeler Avenue, 2917 Wheeler Avenue, 2918 Cleburne Street, 2900 Holman Street (Blackshear Elementary), 3005 Holman Street, 3204 Ennis

Street (Houston Negro Hospital and the School of Nursing Building). THC concurred that remaining surveyed resources within Segment 3 are not eligible for listing in the NRHP.

In 2008 and 2019, the THC determined the Third Ward Historic District eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development, and eligible under Criterion C in the area of Architecture. A NRHP nomination completed in 2008 describes the architecture as varied and following national architectural movements. (Randall and Korfmacher 2008: E 19). There was no discussion of landscape or setting in the NRHP nomination. The NRHP nomination has not gone through the designation process at the time this report was written. The houses abutting Wheeler Avenue are predominately Tudor style with front yards, a sidewalk and green space before the curb which is typical for this era.

Property Acquisitions

A substantial portion of Segment 3 travels through the NRHP eligible Third Ward Historic District. ROW acquisition is required on some properties to improve turning radii, safety sight distances at street intersections, to provide wider 10' sidewalks, and to provide handicap accessible ramps at street crossings per the American with Disability Act (ADA) (**Figures 3-1a, 3-1b, 3-1c** and **Table 3- 1**). These sidewalk expansions are required per the City of Houston Infrastructure Design Manual and will bring the existing sidewalks up to current design standards and improve pedestrian/bicycle and handicap access.



Acquisitions will primarily occur at street intersections of Ennis and the following cross streets: Wheeler, Cleburne, Alabama, Holman, and Elgin. In many cases, the acquisitions needed are "corner clips" that are to provide for a wheelchair ramp and bring the sidewalks to ADA compliance and City design standards. In other cases, strips of property acquisitions are needed along the front, back or side of a property to provide a wider sidewalk to meet the City design stations and to accommodate a safety buffer area between the curb and the sidewalk. These strips of property acquisitions include the need for corner clips at 3204 Ennis Street from the individually listed Houston Negro Hospital and School of Nursing Building.

* Noncontributing is based on Criterion C, architecture only.

2202 Wheeler Avenue (Parcel 3-046)
The property acquisition at the vacant property at the corner of Hutchins Street and Emancipation Avenue, 2201 and 2203 Wheeler Avenue would include a corner and a strip acquisition of 275.9 square feet behind the existing sidewalk **(Figure 3-2)**.

4402 Emancipation Avenue (Parcel 3-055)
The property acquisition at 4402 Emancipation Avenue would include a small triangle of 5.3 square feet behind the existing sidewalk **(Figure 3-3)**.

4405 Emancipation Avenue (Parcel 3-056)
The property acquisition at 4405 Emancipation Avenue would include a small triangle of 23.1 square feet behind the existing sidewalk **(Figure 3-3)**.

2201 Wheeler Avenue (Parcel 3-111)
The property at the corner of Hutchins and Wheeler is 2201 Wheeler Avenue and the 9.7 sq ft to be acquired is property owned by the State of Texas left from the construction of US-69. No acquisition of property would be made from the residential property **(Figure 3-2)** although the address is the same. The THC commented about 4311 Hutchins, which is located to the rear of 2201 Wheeler Avenue and is outside of the APE. There are no property acquisitions from 4311 Hutchins.

4314 Emancipation Avenue (Parcel 3-120)
The property acquisition at 4314 Emancipation Avenue would include a small triangle of 5.0 square feet behind the existing sidewalk **(Figure 3-3)** for a sidewalk and a wheelchair ramp.

4311 Emancipation Avenue (Parcel 3-121)
The property acquisition at 4311 Emancipation Avenue would include a small triangle of 33.7 square feet behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-3)**.

2405 Wheeler Avenue (Parcel 3-122)
The property acquisition at 2405 Wheeler Avenue would include a small triangle of 4.8 square feet behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-3)**.

2411 Wheeler Avenue (Parcel 3-123)
The property acquisition at 2411 Wheeler Avenue would include a small triangle of 4.2 square feet behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-3)**.

3002 Alabama Street (Parcel 3-162)
The property acquisition at the intersection of Ennis and Alabama Streets, 3002 Alabama Street, would include a corner clip of 123.8 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-6)**.

3003 Alabama Street (Parcel 3-163)
The property acquisition at the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 210.5 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-6)**.

3503 Ennis Street (Parcel 3-179)
The property acquisition at the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 42.8 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-4)**.

Figure 3-2: ROW acquisitions from 2201 and 2202 Wheeler Avenue

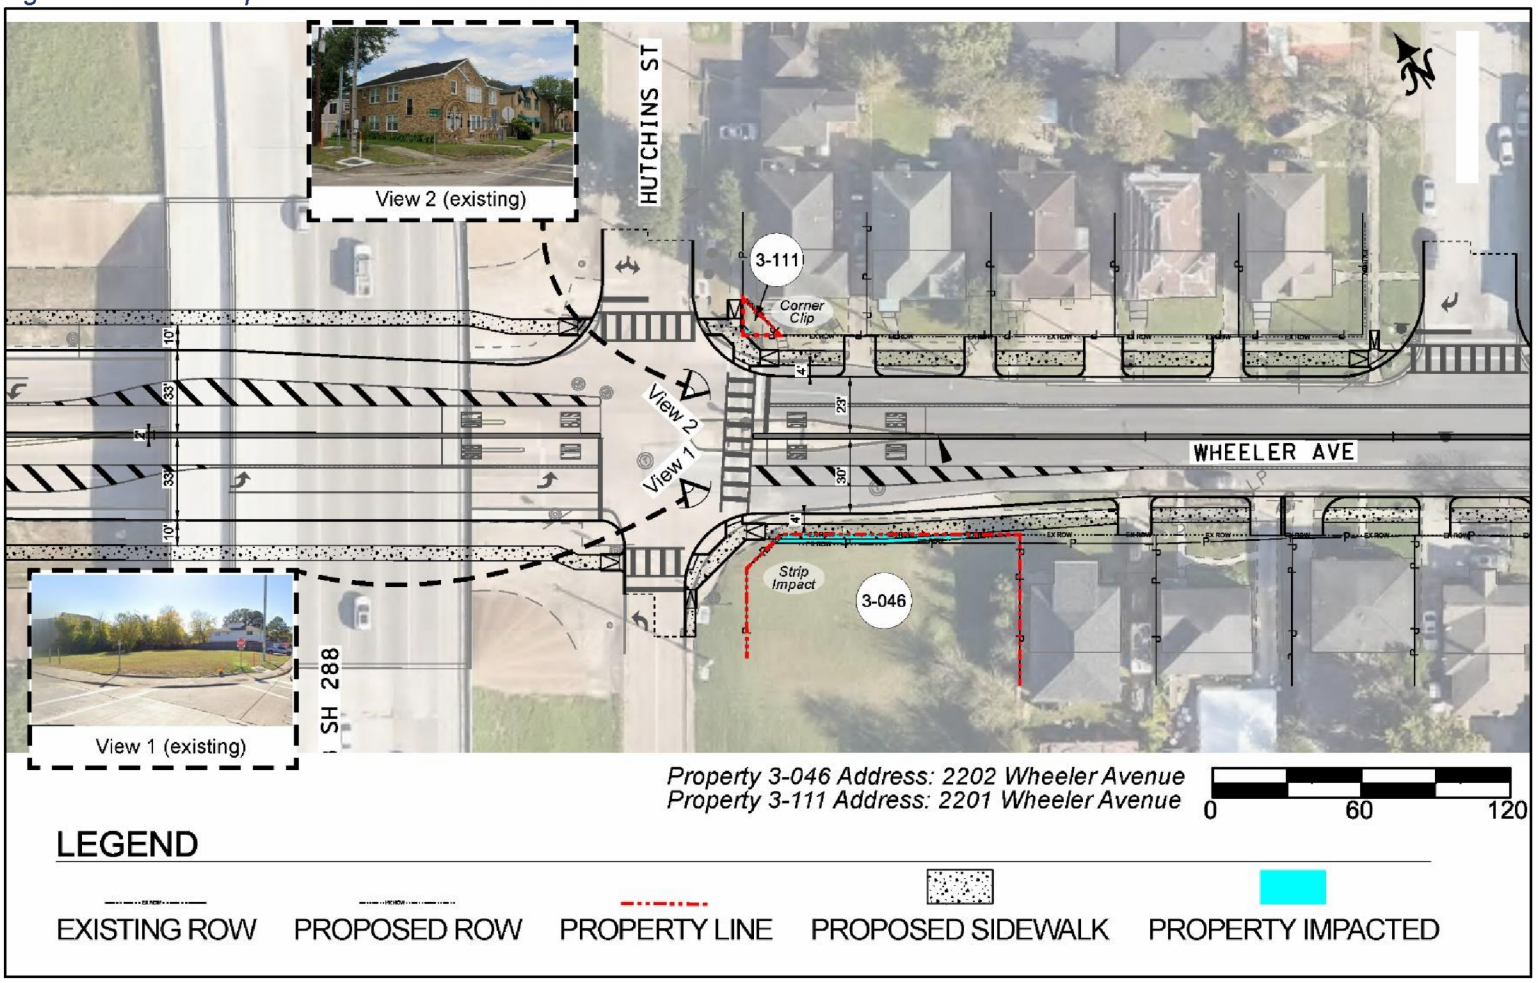

Figure 3-3: ROW acquisitions from 4402, 4405, 4314, and 4311 Emancipation Avenue and 2405 and 2411 Wheeler Avenue

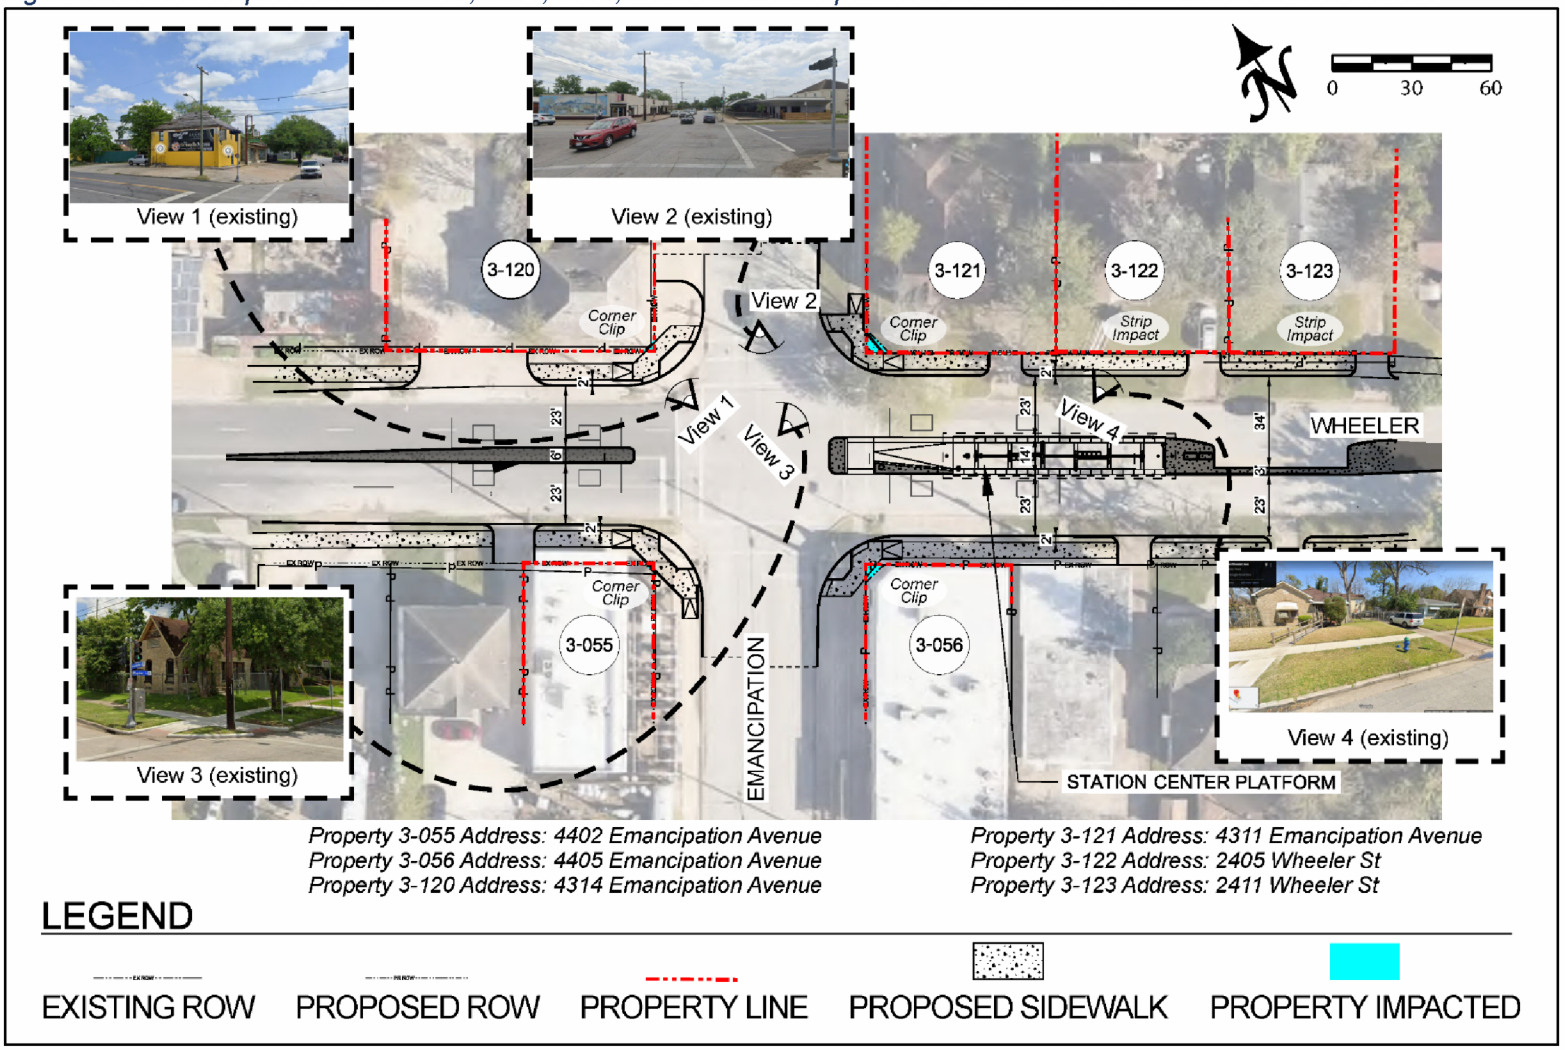

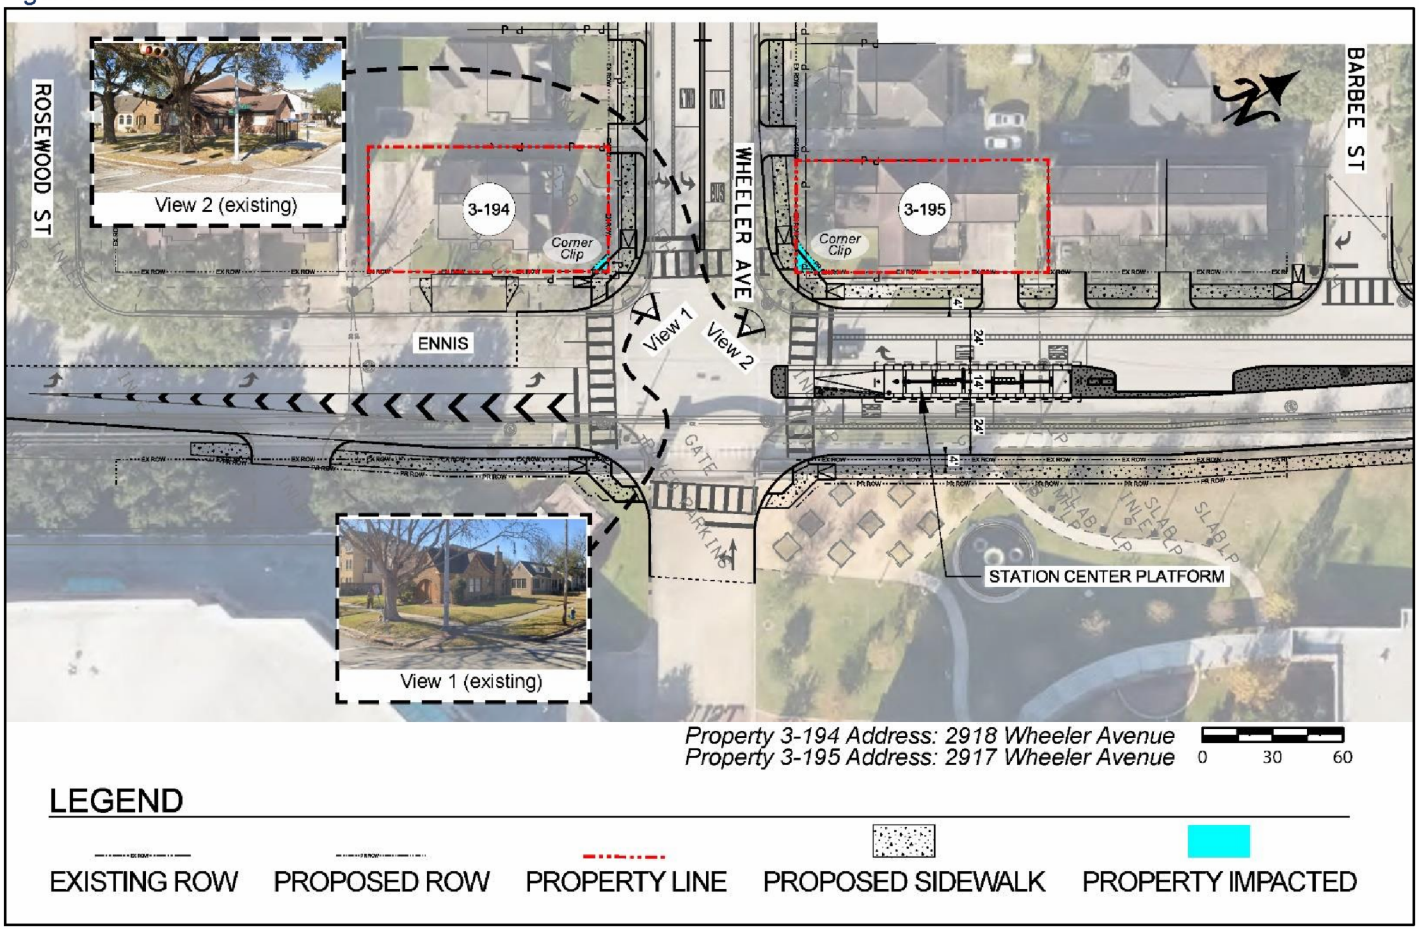

Figure 3-4: 3204 Ennis Street, NRHP-Listed Houston Negro Hospital and School of Nursing and 3503 Ennis Street and 3005 Holman Street

Figure 3-5: 2917 and 2918 Wheeler Avenue

3005 Holman Street (Parcel 3-180)
The property acquisition at the northeast corner of the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 14.4 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-4)**.

2918 Wheeler Avenue (Parcel 3-194)
The property acquisition at 2918 Wheeler would include a small triangle of 31.7 square feet behind the existing sidewalk **(Figure 3-5,** southeast corner of Ennis Street and Wheeler Avenue) for a sidewalk and a wheelchair ramp.

2917 Wheeler Avenue (Parcel 3-195)
The property acquisition at 2917 Wheeler would include a small triangle of 82.9 square feet behind the existing sidewalk (**Figure 3-5**, northeast corner of Ennis Street and Wheeler Avenue) for a sidewalk and a wheelchair ramp.

3812 Ennis Street (Parcel 3-209)
The property acquisition at the intersection of Truxillo and Ennis Streets, 3812 Alabama Street, would include a 226.2 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-6)**.

3808 Ennis Street (Parcel 3-210)
The property acquisition at 3808 Ennis Street, would include a 191.5 square feet behind the existing sidewalk for a widened sidewalk **(Figure 3-6)**.

3806 Ennis Street (Parcel 3-211)
The property acquisition at 3806 Ennis Street, would include a 202.8 square feet behind the existing sidewalk for a widened sidewalk **(Figure 3-6)**.

2908 Alabama Street (Parcel 3-212)
The property acquisition at the intersection of Alabama and Ennis Streets, 2908 Alabama Street, would include a 787.9 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-6)**.

2801 Alabama Street (Parcel 3-213)
The property acquisition at the intersection of Alabama and Ennis Streets, 2801 Alabama Street, would include a 493.7 square feet behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-6)**.

3224 Ennis Street/2900 Holman Street, Blackshear Elementary School (Parcel 3-215 and 3- 216)
The Blackshear Elementary School (addresses appear as 3224 Ennis Street and 2900 Holman Street), 2900 Holman Street, would have a corner clip acquisition at the corner of Ennis and Holman Streets, in the amount of 9.5 square feet for a wheelchair ramp **(Figure 3-7).** The existing wheelchair ramp has a utility pole in it and it would be relocated to public right-of-way as part of the BRT Project.

3204 Ennis Street, NRHP-Listed Houston Negro Hospital and the School of Nursing (Parcel 3-217)
The NRHP-Listed Houston Negro Hospital and School of Nursing occupy the block between Holman and Elgin Streets. The property acquisition is listed with the address of 3204 Ennis Street and would include corner clips at Holman Street and Ennis Street and at Ennis Street and Elgin Street. The total land area to provide for a wider sidewalk and wheelchair ramp would be 138.5 sq ft (**Figure 3-4**).

3115 Ennis Street (Parcel 3-297)
The property acquisition at the southwest corner of the intersection of Elgin and Ennis Streets, 3115 Ennis Street, would include a small triangle of 24.8 square feet behind the existing sidewalk (**Figure 3- 8**) for a sidewalk and a wheelchair ramp.

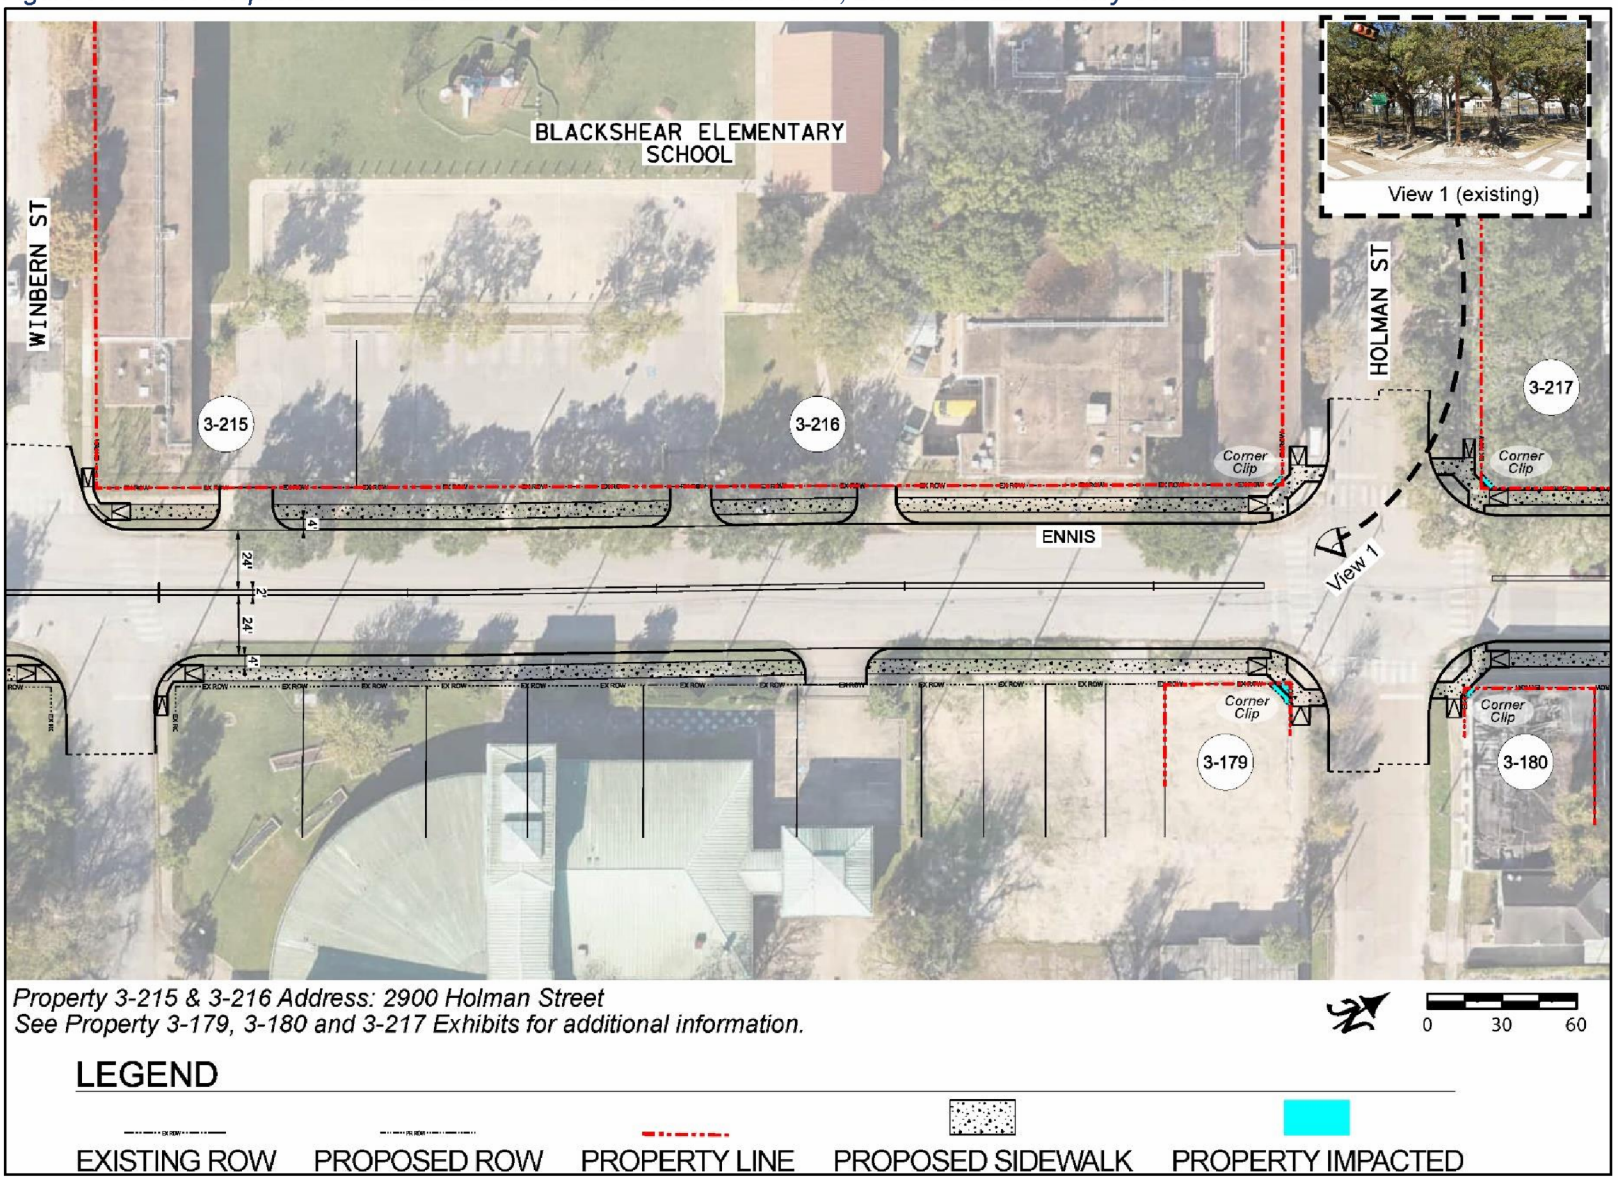

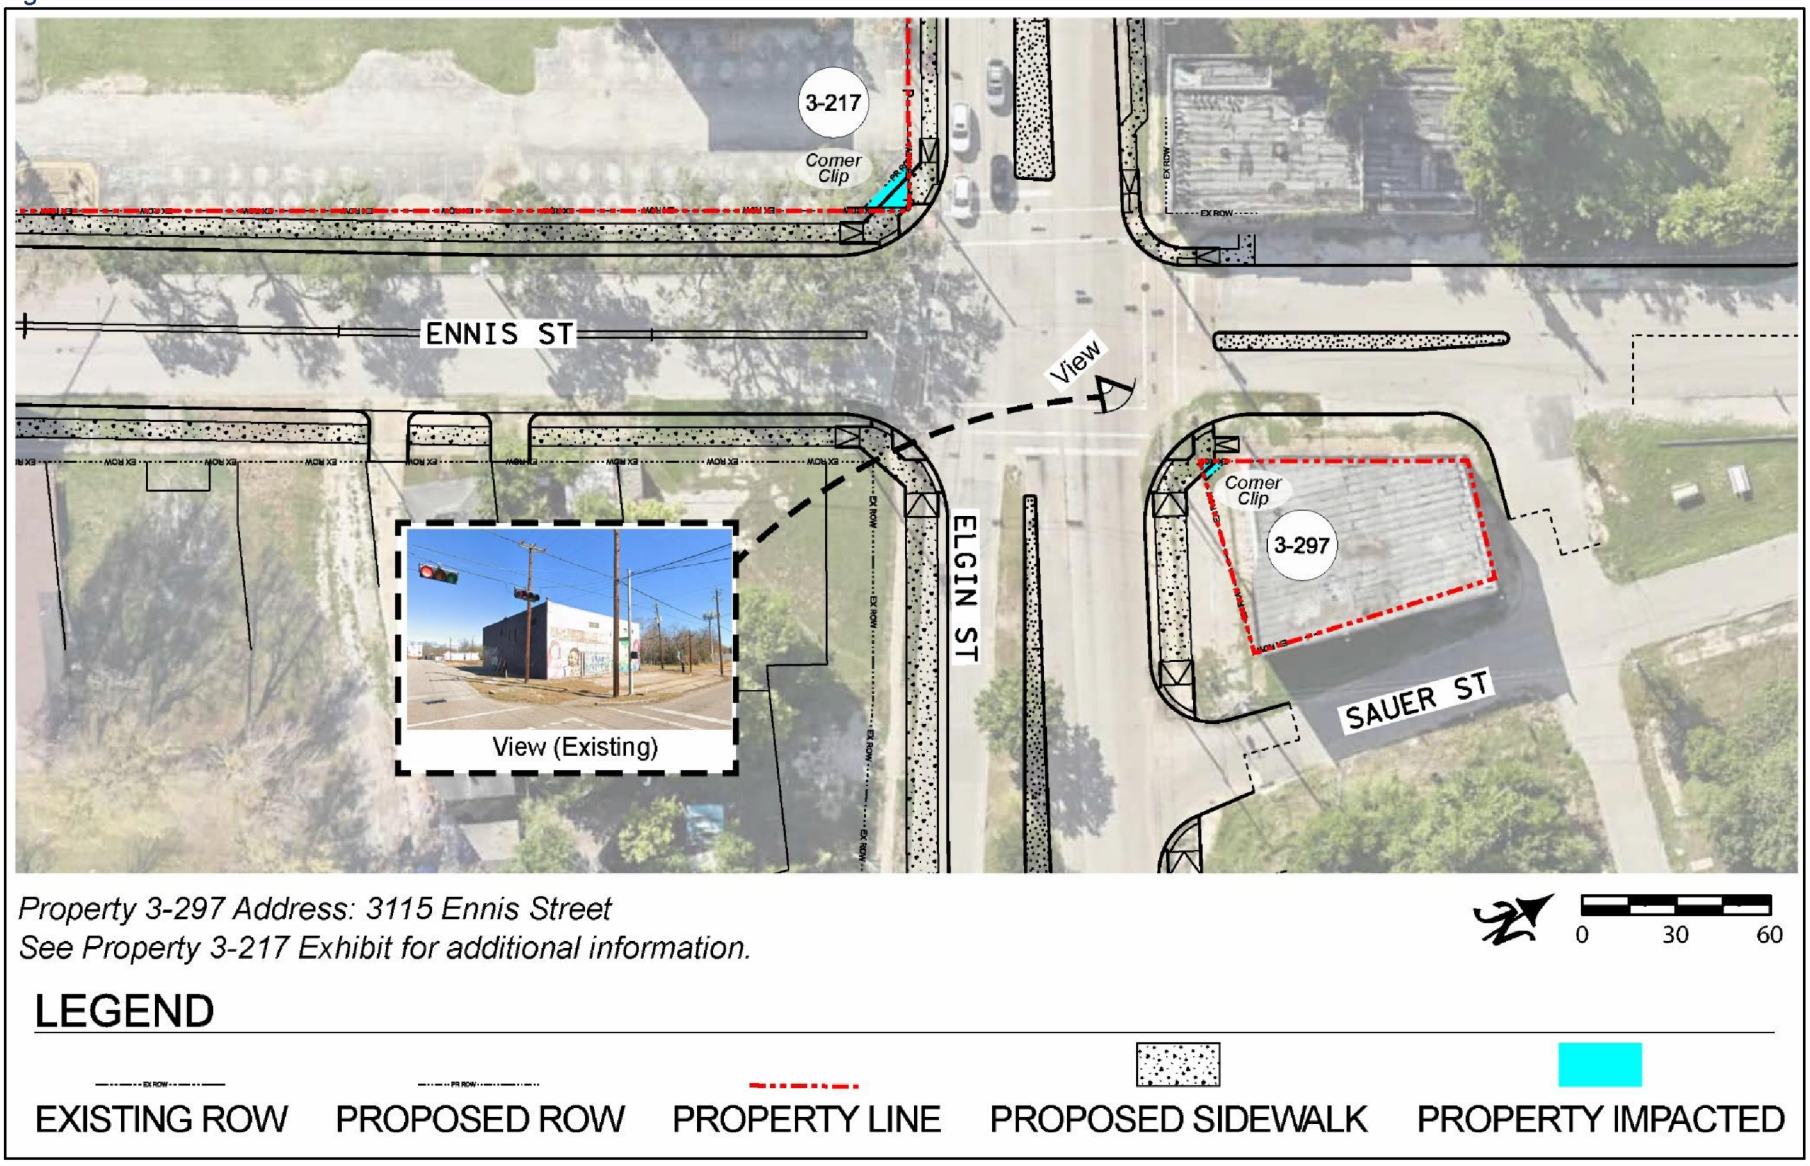

Figure 3-8: 3115 Ennis Street

Visual Effects
Stations would be introduced as a new visual element within the historic district. Three BRT Stations and platforms would be located along the BRT at Wheeler Avenue, Alabama Street, and Elgin Street. Stations are yet to be designed and METRO has committed to a contextual station design within the district in a manner that minimizes visual effects to the district's architecture and preserves the ethnic heritage. Specific station design will occur during preliminary engineering and a series of community workshops will be held following NEPA completion to inform community members of the design process. Public Opinion Surveys will be provided to property owners and residents within the historic district to obtain input on design elements and materials to be used in developing the 60 percent plans. The survey will provide samples of existing contributing properties within the district and seek input on the elements that should be emulated in the BRT Station design.

METRO will coordinate with the City of Houston's Planning & Development Historic Preservation Office and consulting parties will be invited to participate in the design workshops, the survey, and review and comment on 60 percent station design plans. Specific outreach will include meetings with the Greater Third Ward Super Neighborhood and the sub-neighborhoods specific to the Third Ward Historic District.

Third Ward Historic District Effects Determination
The historic district covers roughly 750 acres. The removal of less than 3,000 sq ft (.07 percent) of sidewalks for 22 parcels is nominal and would not be adverse. METRO will continue to reduce property acquisitions as it refines project design.

The introduction of bus-shelters like BRT Stations would introduce a new visual element within the district that is not already present; however, the BRT Station designs will be completed in a manner to minimize visual effects to the district and will mimic the district's existing character and reflect on its history. METRO's arts-in-transit program will integrate historic elements into the BRT Stations through community-chosen arts-in-transit selections, i.e., interpretive historic panels at stations and/or a cultural walk incorporated into sidewalks that symbolize the district's ethnic heritage. The BRT Project would not alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association; therefore, the Project would have no adverse effect to the historic district. METRO commits to the following conditions to minimize visual effects of the BRT lanes and underpass:

a) Station designs that mimic the neighborhood scale, architectural styles, and materials of the district (varied styles),
b) Historic interpretive panels that provide an educational opportunity on the history of the district's Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development to be identified with community input,
c) Replanting of trees in the buffer between the curb and the sidewalk at intervals recommended by the City of Houston Arborist and in accordance with the City's Tree Ordinance,

d) Public Outreach on station designs and METRO's arts-in-transit program to include a survey and a design workshop, and,
e) 30-day Consulting party design reviews of 60 percent plans.

Other Segment 3 Properties Information Request by THC
THC asked for clarification on resources on several properties in Segment 3 and that detail is provided above for properties where ROW acquisition would occur (4311 Emancipation Avenue, 2918 Wheeler Avenue, 2917 Wheeler Avenue, 3224 Ennis/2900 Holman Street, 3204 Ennis Street, and 3115 Ennis Street).

4311 Hutchins. This property is outside of the APE and was not surveyed. There would be no ROW acquisition for this property. (See description for adjacent property at 2201 Wheeler Avenue.).

2918 Cleburne Street (Parcel 3-202). There will be no property acquisition from this property. The GIS file shows an acquisition of two inches and METRO has eliminated those two inches from the design plans.

3.3 Segment 4 Effects on Eastwood Subdivision Historic District

The following section describes effects of the BRT Project within the Eastwood Subdivision Historic District (district). The BRT would enter the assumed NRHP eligible Eastwood Historic District (the district) at Leeland/Lockwood and would travel north through the district in dedicated BRT lanes. These lanes would be primarily constructed within the existing right-of-way of Lockwood Drive, however, minor property acquisitions are needed to bring the existing sidewalks up to City of Houston design standards (**Figure 3-9**). One BRT Station would be located within the District. ROW acquisition is required on some properties, per the City of Houston Infrastructure Design Manual, to improve turning radii, safety sight distances at street intersections, provide sidewalks, and/or to provide wheelchair ramps at pedestrian crossings designed for ADA Compliance and would require partial acquisitions for strips of property along Lockwood Drive and/or at corners of properties. One general purpose lane in each direction would remain on Lockwood Drive.

Property Acquisitions
Acquisitions within the district would primarily occur at street intersections of Lockwood Drive and the following cross streets: Clay, Polk, Woodside, Park, McKinney, Walker, and Rusk. In many cases, the acquisitions needed are "corner clips" that are to provide for a wheelchair ramp and bring the sidewalks to ADA compliance and City design standards. In other cases, strips of property acquisitions are needed along the front, back or side of a property to provide a wider sidewalk to meet the City design stations and to accommodate a safety buffer area between the curb and the sidewalk.

Partial strips of property acquisitions and/or corner clips would result in 0.12 acres being converted to transportation use out of approximately 135.8 total acres of the district. No buildings would be altered or demolished for these minor acquisitions and the acquisitions would not result in an adverse effect on the district or any individual contributing resources within the district. **Table 3-2** details the acquisitions within the district.

Figure 3-9: Acquisitions from property within the Eastwood Historic District

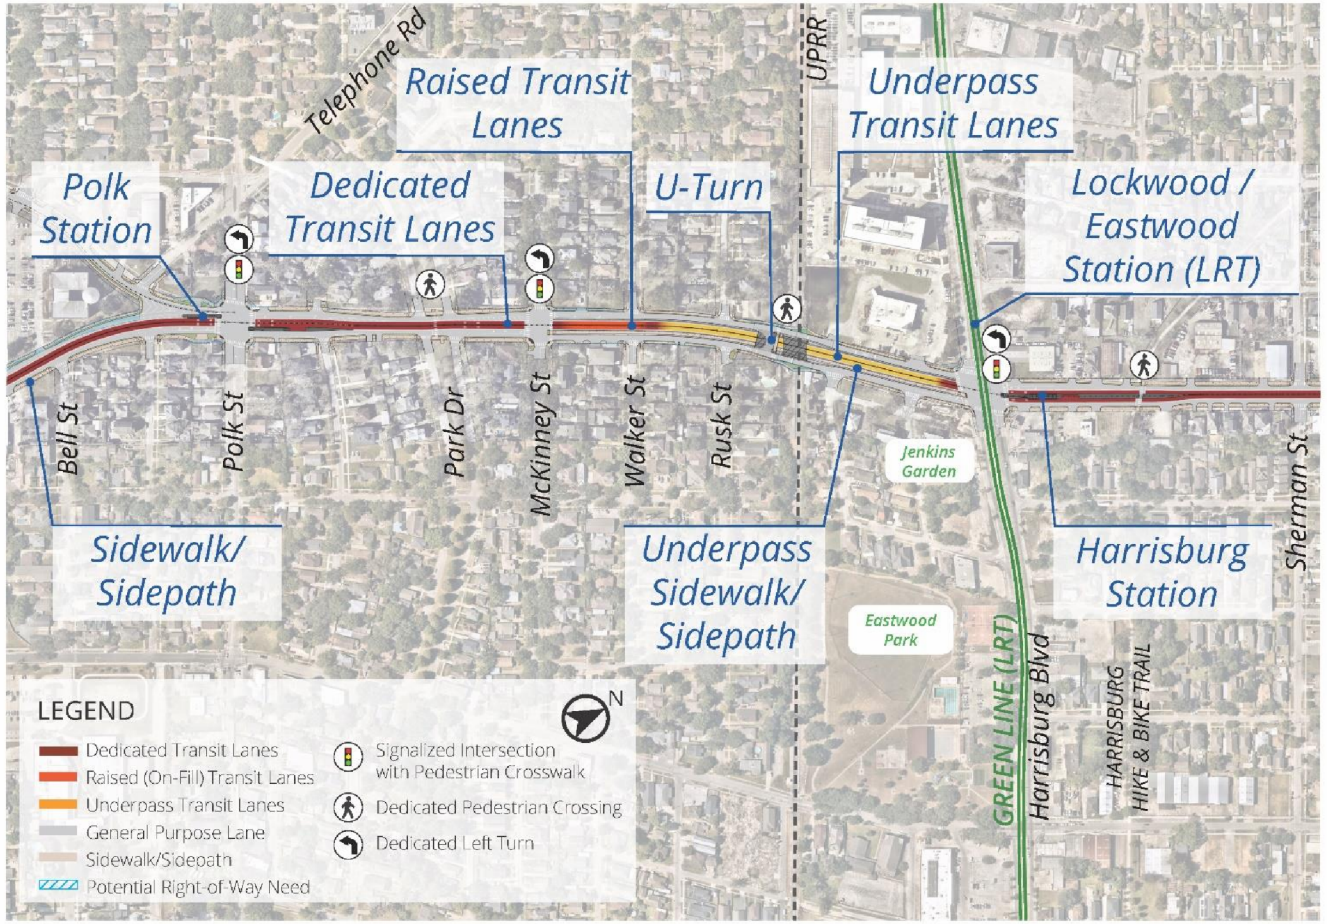
July 2023, HNTB Updated Design – reduced footprint



Roadway Alterations to the Historic Subdivision Plat

The historic subdivision plat was altered when Maplewood Avenue (renamed to Lockwood Drive) was widened from 60-ft to a four-lane divided road, roughly 100-ft, with a median (**Appendix C** – Streetscape Photos). The original plat was laid out with the primary access from Harrisburg Road and the Harrisburg Streetcar. The introduction of a major thoroughfare severely altered the subdivision's plat by providing a north-south transportation passage through the neighborhood. Despite these changes, the subdivision plat does retain its east-west grid pattern north of Park Avenue although bisected by Lockwood Drive. The introduction of Lockwood Drive also allowed for building orientations to change and face Lockwood Drive, instead of the east-west streets as originally laid out by the developer.

The BRT Project would be constructed in the median of Lockwood Drive that was not part of the original plat of the subdivision. The BRT's presence in the middle of Lockwood Drive, would prohibit left turns at Woodside Street, Walker Street, and Rusk Street. Right turns would still be allowable and circulation to and from the neighborhood streets would remain intact. No streets would be closed and the existing grid pattern of streets would remain. The Project will include pedestrian and bicycle crossings at Polk and McKinney Streets and will add pedestrian and bicycle only crossings at Park Drive and the new u-turn prior to the UPRR tracks.

Traffic analysis identified that freight trains block the road intersection of Lockwood Drive at the UPRR tracks for 200 days per year for a duration longer than 10 minutes. This impedance to the road increases vehicular traffic, hinders emergency services, and causes delays to existing bus traffic. The engineering team developed a solution of an overpass at the UPRR; however, concerns expressed by Eastwood residents and community stakeholders regarding the visual impact of the overpass led to the engineering team to modify the design to an underpass for the BRT, pedestrians/bicycles, and emergency service vehicles. (**Figures 3-10, 3-11, and 3-12**). Left turns across the BRT lanes would be prohibited but right turns would still be allowable. **(See Figure 3-10).** The general-purpose travel lanes will remain at the existing street grade and METRO will provide a vehicle turnaround giving passenger vehicles a choice to reroute in the event of a train blocking the intersection. (**Figure 3-13**).

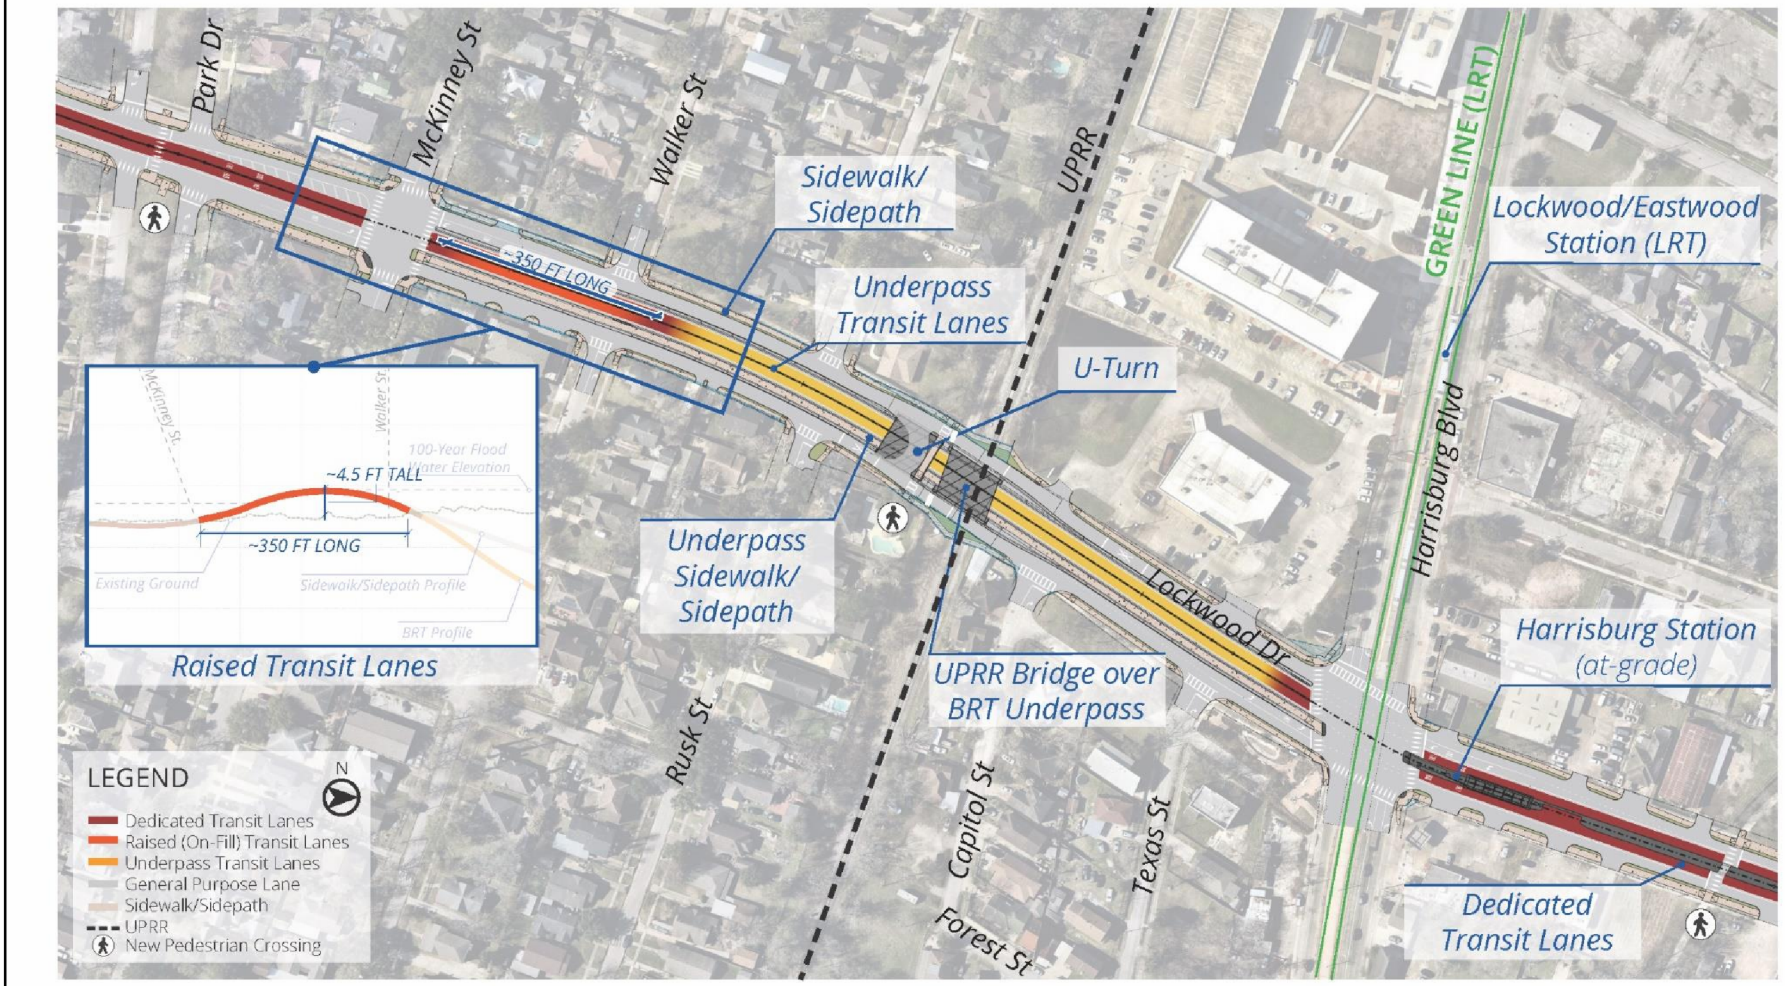


Figure 3-10 Traffic Condition with BRT Project

Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

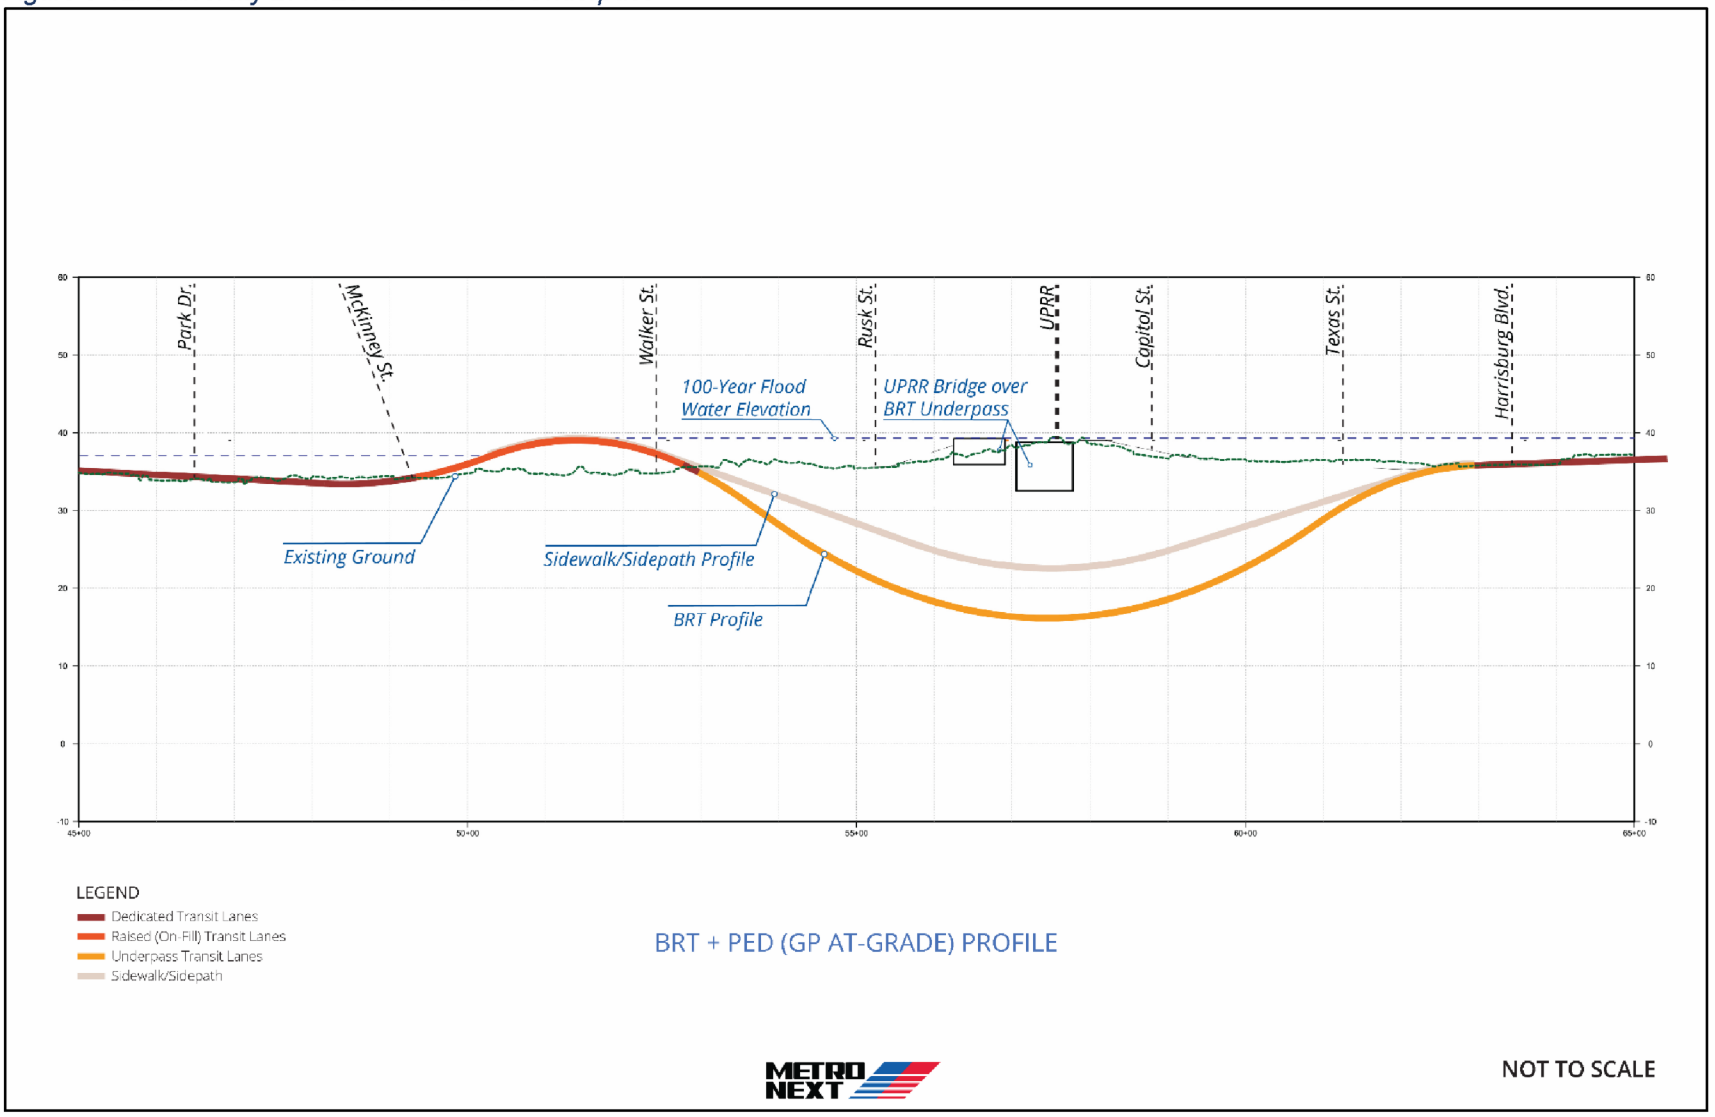
NOT TO SCALE

Figure 3-11: University BRT Lockwood Drive Underpass

Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

NOT TO SCALE

Figure 3-12: University BRT Lockwood Drive Underpass



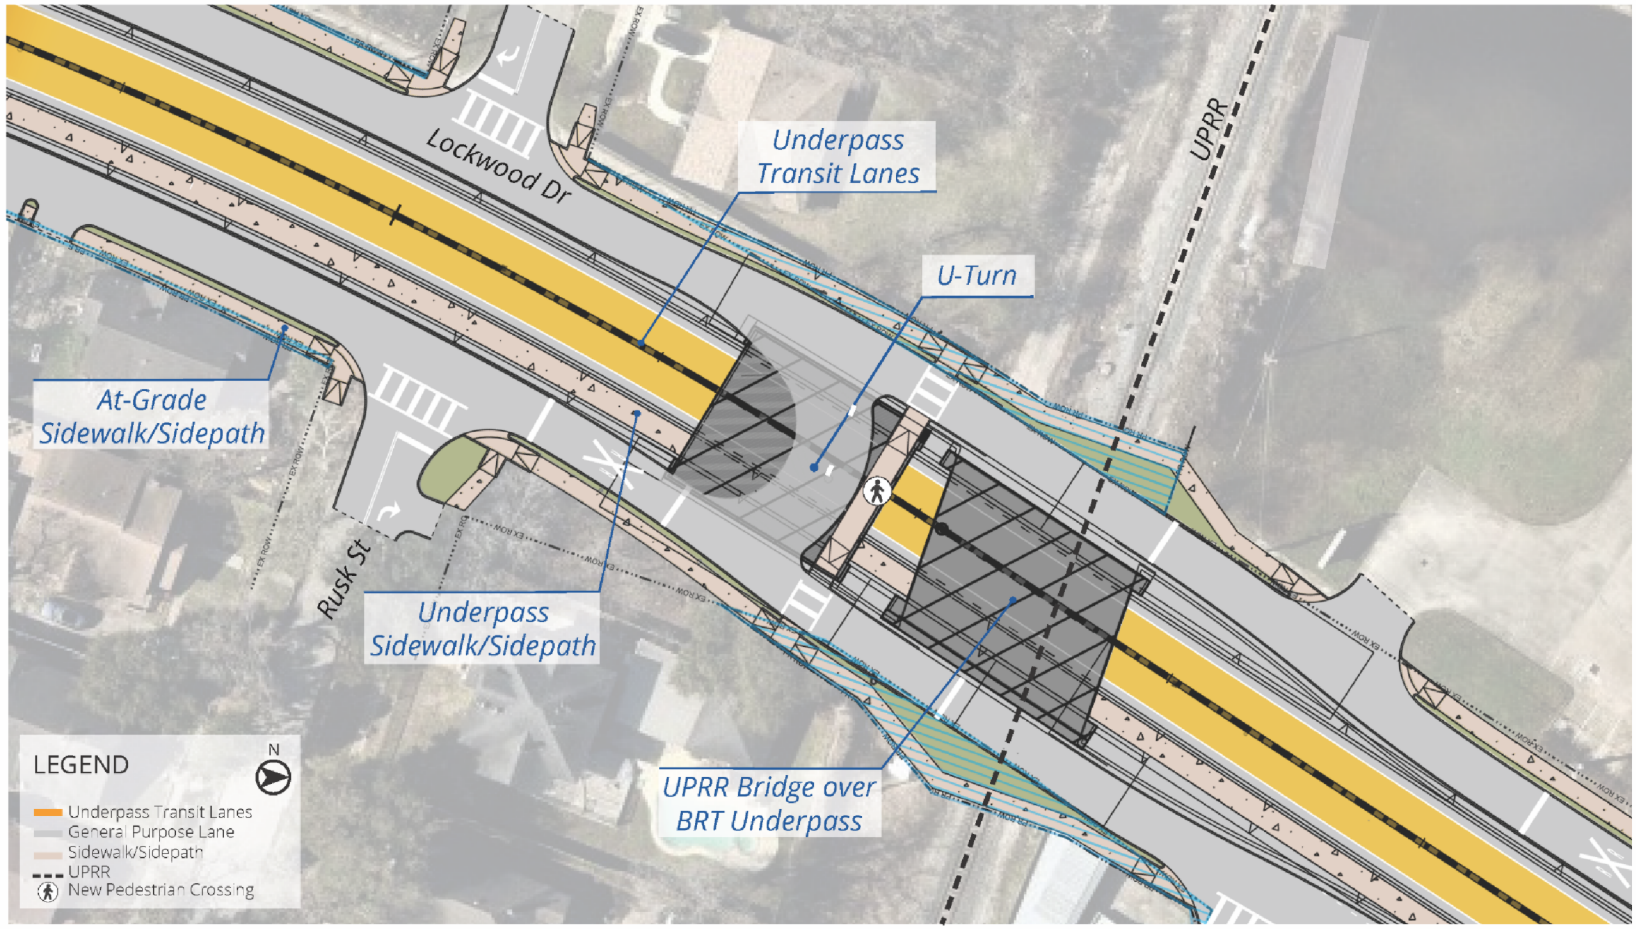


Figure 3-13: University BRT Lockwood Drive Underpass

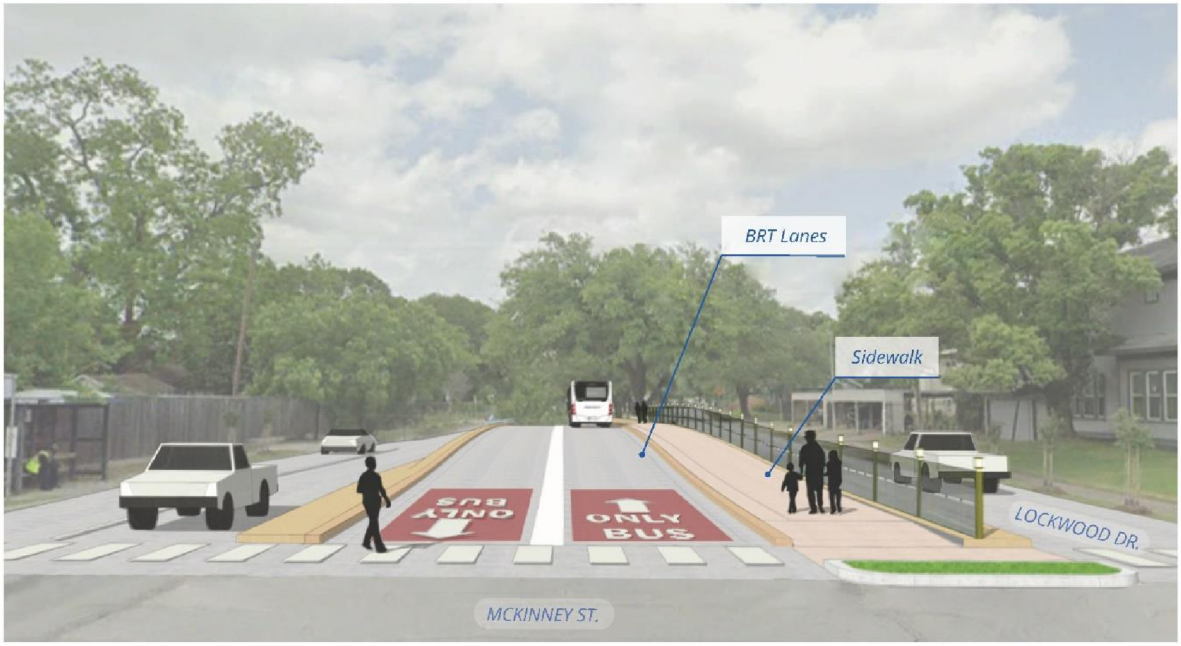
Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

NOT TO SCALE

The BRT underpass would begin to descend under the UPRR freight tracks at Walker and transition to fully underground just after Rusk Street. The insertion of the underpass will require the median to be closed at Walker and Rusk to both pedestrians and vehicles. As the BRT lanes begin to descend into the underpass, a traffic barrier between the general-purpose lanes and the depressed BRT lanes is needed for safety. METRO is committed to complementary design treatments, with community input, in this area to reduce visual effects as long as safety requirements are met **(Figures 3-14).**

Visual - Stations

The Polk BRT Station Platform would be located along Lockwood Drive at Polk Street within the district boundaries. The station platforms are split to minimize the need for greater property acquisitions on adjacent properties.



Like the Third Ward Historic District, stations are yet to be designed and METRO has committed to a station design that matches the scale of the existing homes adjacent to Lockwood Drive, the historic period, and mimics the architecture of the district to minimize visual effects. Specific station design will occur during preliminary engineering and a series of community workshops will be held following NEPA completion. METRO will conduct Public Opinion Surveys with property owners and residents within the historic district to obtain input on design elements and materials. The survey will provide samples of existing contributing properties and seek input on the elements that should be emulated in the BRT Station design. **Figure 3-15** shows home styles that design elements and materials that could be incorporated into the station design, including: brick and wood siding materials, iron fencing, exposed beams, tapered columns, and natural colors with white accents.

METRO will also utilize its arts-in-transit program to incorporate elements of the district's history and architecture. METRO will coordinate with the City of Houston's Planning & Development Historic Preservation Office and consulting parties will be invited to participate in the design workshops, the survey, arts-in-transit selections, and to review and comment on 60 percent station design plans. Specific outreach will include meetings with the Greater East End Super Neighborhood and the Eastwood Civic Association.

Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

Figure 3-15: Existing Home Styles within the Eastwood Historic District

Visual - Neighborhood sign

While not historic, the neighborhood sign **(Figure 3-16)** in the median just south of Rusk, is of particular importance to the community and provides a sense of place. The sign mimics the bungalow style represented in the neighborhood with tapered columns, exposed beams and a pitched roof. This sign could be relocated to the station platform or replicated and placed at the stations and/or both entrances of the historic district.

Visual - Landscaping

The project's use of the median of Lockwood Drive removes an existing greenspace within the district. The existing median was not included in the original subdivision plat as it was created circa 1970 when Maplewood Drive was widened from two to four lanes, removing a row of housing in the center of the district, to become the four-lane principal roadway that it is today. The City's expansion of Maplewood Drive changed the characteristic and layout of the original subdivision plat and the landscaping along Lockwood Drive was not consistent with the developer's plans. Some trees exist in the median between Woodside and Harrisburg streets. There are a few medium size trees and small newly planted trees in the grass buffer, between the curb and sidewalk between Woodside and

Harrisburg streets mainly on the east side of Lockwood Drive. Landscaping will be included in the design plans and all trees will be replaced in accordance with the City of Houston's required Tree Preservation plan.

Figure 3-16: Existing Eastwood Neighborhood Sign (not historic)

Underpass Design and Flood control

The underpass design includes elements of flood control to prevent the water from entering the neighborhood from the Harrisburg-side of the underpass. At present, the UPRR tracks divide two watersheds and act as a levee; the design for an underpass must include flood gates to prevent stormwater from flowing through the underpass into Eastwood. A floodgate and a pumping station will be located outside of the historic district on the north side of the UPRR tracks. The flood gate would be closed during a 100-year flood event or greater.

Another important flood control element is a 350 -foot berm on fill that would be begin between McKinney Street and would gradually rise to an elevation of approximately 4.5' and then fall back down to existing street level at Walker Street before transitioning to below grade prior to the UPRR. This berm will provide a way to contain stormwater and avoid flooding into neighborhood streets. As the BRT begins to descend into the underpass, a wall would run alongside the BRT lanes to serve as a traffic barrier and as sides of the underpass. This will provide a separation between the general-purpose lanes and the BRT Underpass. The barrier would provide an opportunity for neighborhood signage, arts-in-transit, or interpretive historic panels into the project design. It will include

decorative railings that complements the surrounding architecture of the district and soft scaping with materials and landscaping **(Figure 3-17 and 3-18).**

Figure 3-17: University BRT Lockwood Drive BRT Lanes view from Walker Street

PROPOSED VIEW LOOKING WEST AT LOCKWOOD DR. FROM RUSK ST.

Illustrations for representational purposes only. Materials, fencing, colors and specific design treatments will change following additional consulting party input during station design workshops and the 60 percent engineering plan reviews.

Noise

Noise levels from the BRT will be lower than those of existing buses due to the commitment to use a battery powered electric vehicle. No noise impacts are projected to occur because of normal operations of the Project. Construction of the BRT would require a temporary shoofly of the UPRR to be constructed within the rail ROW. Noise mitigation will be provided during construction to offset noise increases to the adjacent homes in the first row closest to the UPRR. METRO contractors will comply with the City of Houston Noise Ordinance for time and sound level limits. Visual effects of the shoofly will be temporary.

No Adverse Effect

The BRT Project would not alter, directly or indirectly, any of the characteristics of a historic district that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. The BRT Stations, lanes, and underpass would be inserted into a streetscape that was previously altered by the expansion of Maplewood. These alterations modified the neighborhood by widening Maplewood from two to four lanes and making it a principal arterial and made permanent changes to the original plat in size, building orientations, and introducing new visual elements associated with a principal arterial. The intrusion of the new Lockwood Drive provided connections from the north and south, instead of the neighborhood's initial orientation to downtown to the west by streetcar.

The BRT Project would continue to provide transit service to the neighborhood, connect with the Greenline Light Rail on the north side of Harrisburg and provide an enhanced connection to a service that is similar to the Harrisburg Streetcar. The Project will provide enhanced transit resources and connections, reinforcing the neighborhood's preferred setting close to Downtown Houston. Therefore, the Project would have no adverse effect to the historic district. METRO commits to the following conditions to minimize visual effects of the BRT lanes and underpass:

a) Station designs that mimics and complements the neighborhood scale, architectural styles, and materials of the district (Craftsman Bungalow, the Four Square and Colonial Revival),
b) Historic interpretive panels that provide an educational opportunity on the history of the subdivision as a streetcar suburb, to be located with community input within the Project limits,
c) Incorporation of the community Eastwood neighborhood sign into either the station design or the two entrances of the district along Lockwood,
d) Minimizing the visual effects of the traffic barrier between the general-purpose lanes and the underpass, while maintaining safety requirements,
e) Minimizing the visual effects of the four-and-a-half-foot-tall flood berm by including decorative fencing and landscaping, and by including arts-in-transit designs based on community input,
f) Replanting of trees in the buffer between the curb and the sidewalk at intervals recommended by the City of Houston Arborist and in accordance with the City's Tree Ordinance,
g) Noise mitigation during construction,

h) Public Outreach on Polk Station designs and arts-in-transit program to include a survey and a design workshop, and,
i) 30-day Consulting party design reviews of 60 percent plans.

4.0 Summary

The BRT Project would not have an adverse effect on the eligible or listed resources within the APE. FTA and METRO commit to the conditions listed in this Addendum to minimize visual impacts to the Third Ward and Eastwood Historic Districts and the Revised Archaeological Work Plan for the Evergreen Negro Cemetery.

Table 3-3: Effects on Eligible or Listed NRHP Resources.

Segment	Eligible or Listed Resources	Effect Recommendation
Segment 3	Evergreen Negro Cemetery	No effect
Segment 3	Third Ward Historic District NRHP eligible under Criteria A and C	No adverse effect
Segment 4	Eastwood Neighborhood	No adverse effect

University BRT Corridor Project

- 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north
- Will operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston.
- 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices.

University BRT Corridor Project

- Includes Traffic signal improvements and a shared use path with sidewalk and ADA accessibility improvements
- FTA/METRO are completing the required National Environmental Policy Act (NEPA) environmental review process and are a preparing documentation to support a Categorial Exclusion

City of Houston, *Complete Streets Transportation Report*, 2021

What is Section 106?

- National Historic Preservation Act of 1966, as amended
- Set the national policy that federal agencies must consider the effects of their action on historic and archaeological resources
- Created Advisory Council of Historic Preservation (ACHP) to develop regulations and oversee their implementation
- Provides a step-wise process for identifying resources, determining the effects of projects, and resolving any adverse impacts
- Specific to the federal review process for historic and archaeological resources

Useful Resources

- *36 Code of Federal Regulations Part 800*
- *A Citizen's Guide to Section 106 Handbook*
- *Advisory Council of Historic Preservation Web Page*
- *Texas Historic Commission's Website*

STEP 1

Initiating Section 106

FTA, the lead federal agency in the Section 106 process, identifies if there is a federal undertaking. During this initiation, FTA determines, who should be involved in the consultation, and develops a plan to involve consulting parties and the public.

STEP 2

Identify Historic Properties

FTA consults with consulting parties to define the Area of Potential Effects and completes the identification of historic properties (historic and archeological). FTA determines if properties may be affected by the project and if those resources are listed, or are eligible for listing, in the National Register of Historic Places through a Determination of Eligibility.

STEP 3

Assess Adverse Effects

FTA applies the criteria of adverse effects to the listed or eligible properties identified in Step 2 and consults with consulting parties on this assessment. FTA invites the Advisory Council on Historic Preservation (ACHP) to consult if adverse effects are determined.

STEP 4

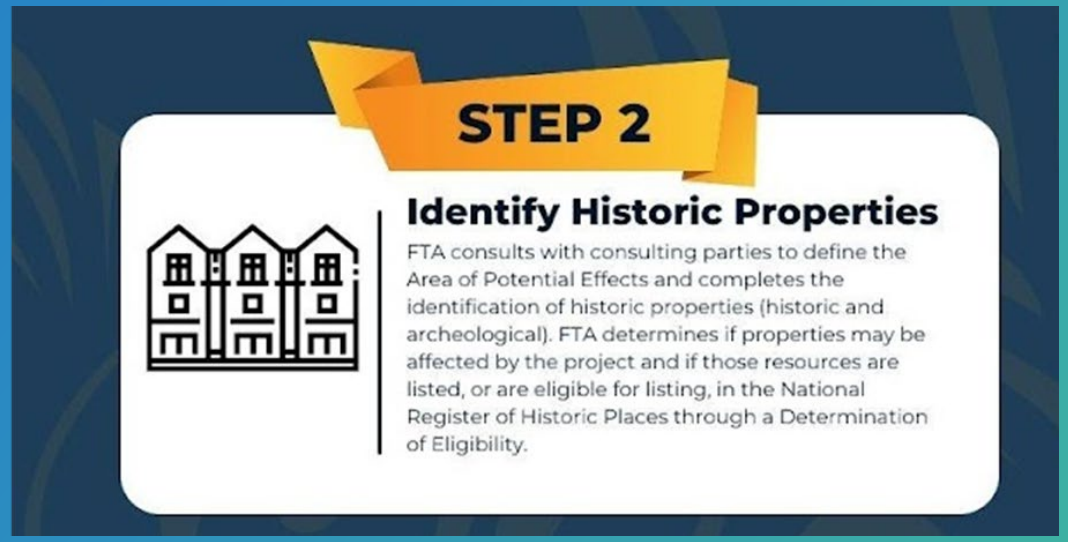
Resolve Adverse Effects

FTA, with input from the Project Sponsor and consulting parties, explores alternatives to avoid, minimize, or mitigate adverse effects identified in Step 3. If an agreement is made on resolution measures, a Memorandum of Agreement (MOA) or a Programmatic Agreement (PA), is developed and executed before NEPA is considered complete.

Step 1 – Initiating Section 106

- ✓ FTA Determines that the Project is an Undertaking with the Potential to Cause Effects
- ✓ FTA/METRO invites consulting parties to participate in the process
- ✓ FTA conducts outreach to tribes
- ✓ Develops a plan to involve the public
- ✓ *Activities completed in 2022*

Who are the Participants?



- Federal Agency – Leads the process
- Local Lead Agency – METRO provides technical assessments through a qualified professional
- Consulting Parties:
  - State Historic Preservation Officer (SHPO) acts as the state expert
  - Indian Tribes and Native Hawaiian Organizations
  - Representatives of Local Governments
  - Additional parties – those with a demonstrated interest
  - The public

U.S. Department of Transportation
Federal Transit Administration

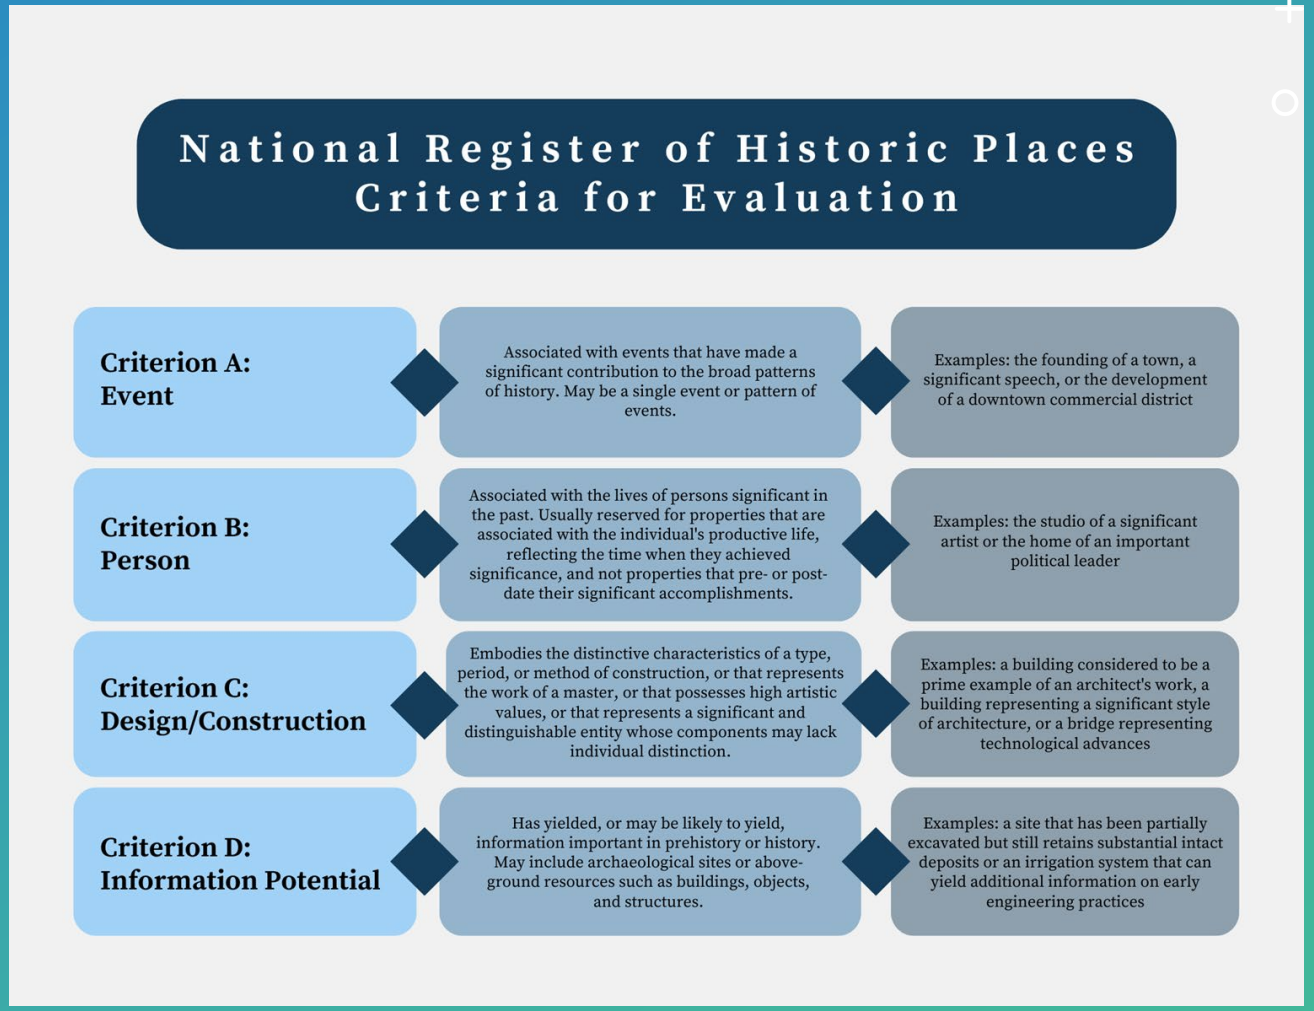
- West Houston Association and Alief Super Neighborhood Council
- First Montrose Commons Civic Association
- East End District
- Second Ward Super Neighborhood/Houston Super Neighborhood Alliance
- Neartown/Montrose Super Neighborhood
- Eastwood Civic Association
- PROJECT RESPECT

Step 2 – Identify Historic Properties

- ✓ FTA defined an Area of Potential Effects
- ✓ METRO consultants prepared a survey of historic resources
- ✓ Resources were examined based on whether or not they are eligible for listing in the National Register of Historic Places or already listed
- ✓ Recommendations on eligibility and listing were provided to the FTA
- ✓ *Seeking Your Input on the Historic & Archaeological Survey Reports*



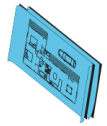
What is a Historic Property?

- Historic Property – Defined as “a prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places” (36 CFR 800)
- Must be eligible for or listed in the National Register of Historic Places - the nation’s official list of properties recognized for their significance in American history, architecture, archaeology, engineering, and culture. The property must be significant, be of a certain age, and have integrity.

NATIONAL REGISTER CRITERIA

Significance

NATIONAL REGISTER CRITERIA

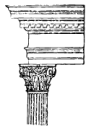


Age – Generally over 50 years

Integrity

SEVEN ASPECTS OF INTEGRITY

LOCATION
The place where the historic property was constructed or where the historic event occurred.



DESIGN
The combination of elements that create the form, plan, space, structure, and style of a property

SETTING
The physical environment of a historic property

MATERIALS
The physical elements that create the form, plan, space, structure, and style of a property

WORKMANSHIP
Physical evidence of the crafts of a particular culture or people during any given period in history or prehistory

FEELING
The property's expression of the aesthetic historic sense of a particular period of time

ASSOCIATION
The direct link between an important historic event or person and a historic property

Step 3 – Assess Adverse Effects

- ✓ Historic Survey Report provides recommended Effects
- ✓ Criteria of Adverse Effects applied
- ✓ Determinations of Effects documented
- ✓ *Seeking your input on the effects included in the Historic & Archaeological Survey Reports*

Adverse Effects are actions that diminish characteristics qualifying a property for inclusion in the National Register

Criteria for an Adverse Effect

- Destruction or damage of all or part of a historic property
- Alteration not consistent with Secretary of Interior Standards for a historic property
- Removal from its location
- Change in use or setting
- Addition of visual, audible or atmospheric elements out of character
- Neglect
- Transfer, sale or lease out of federal control

Source: 36 CFR § 800.5(a)(2)

Step 4 – Resolve Adverse Effects

- If the project results in adverse effects identified in Step 3, then consulting parties explore opportunities to avoid, minimize, or mitigate adverse effects.
- Because the project occurs primarily within publicly-owned right of way, no adverse effects will occur.

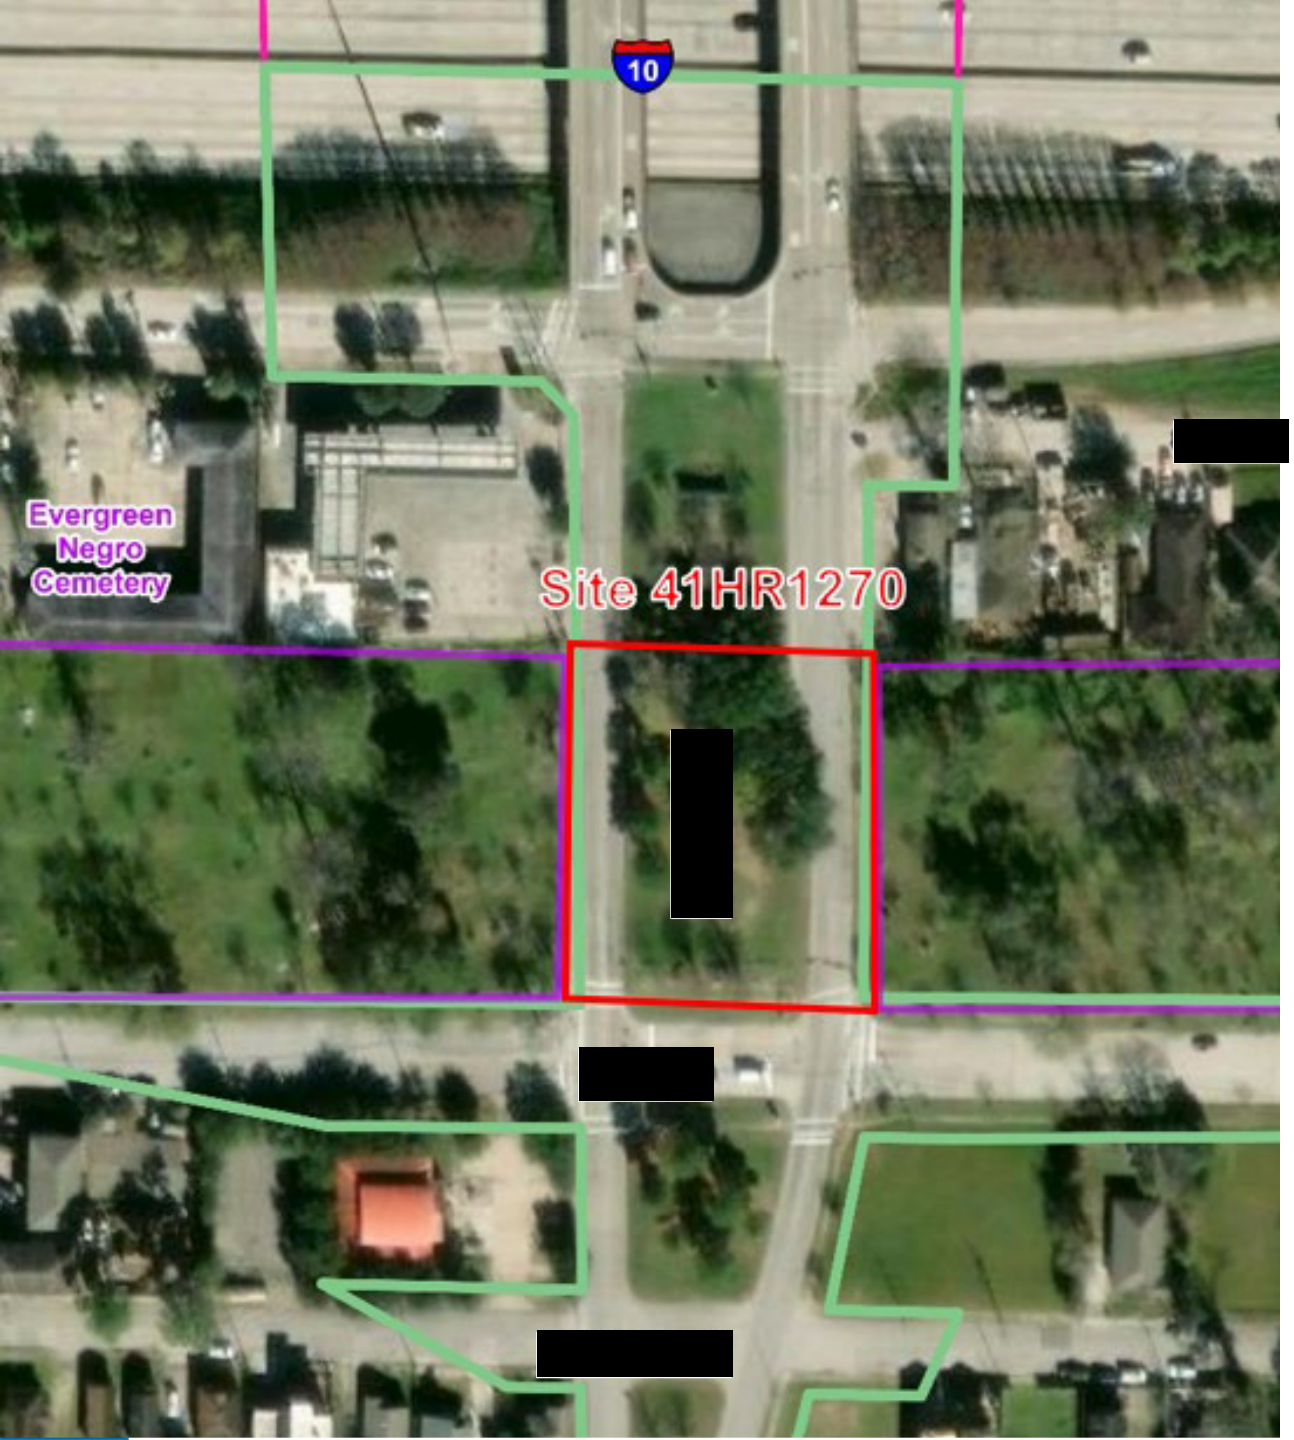
Summary of Reports for Review

- Historic Survey Report
  - Documents the Area of Potential Effects (APE)
  - Details the surveys completed
  - Identifies properties that are eligible or listed on the National Register
  - Applies the criteria of adverse effect
- Archaeological Survey Report
  - Documents the Area of Potential Effects (APE)
  - Details the research completed to identify previously-Identified properties and the potential to encounter properties during construction
  - Provide results of field work
  - Applies the criteria of adverse effect

Historic Property Identification

- 82 Resources surveyed
- 12 Eligible properties, 1 Eligible Historic District, and 2 Listed properties

Address	Status	Description	Criterion
1836 Richmond Avenue	Eligible	Mission Revival house	Criterion C in the area of Architecture local level.
3336 Richmond Avenue	Eligible	New Formalism building	Criterion C in the area of Architecture local level.
3334 Richmond Avenue	Eligible	New Formalism building	Criterion C in the area of Architecture local level.
3323 Richmond Avenue	Eligible	Expressionism building	Criterion C in the area of Architecture local level.
3322 Richmond Avenue	Eligible	International building	Criterion C in the area of Architecture local level.
3311 Richmond Avenue	Eligible	New Formalism building	Criterion C in the area of Architecture local level.
3121 Richmond Avenue	Eligible	New Formalism building	Criterion C in the area of Architecture local level.
3101 Richmond Avenue	Eligible	New Formalism building	Criterion C in the area of Architecture local level.
Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy) at 1906 Cleburne Street	Eligible	High School	Criterion C in the area of Architecture local level.
Third Ward Historic District	Eligible	District	Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development and under Criterion C in the area of Architecture local level.
Houston Negro Hospital at 3402 Ennis Street	Listed	Hospital	Listed under Criterion A in the area of Ethnic Heritage/Black.
Houston School of Nursing School at 3402 Ennis	Listed	Nursing School	Listed under Criterion A in the area of Ethnic Heritage/Black and Criterion C in the area of Architecture. The hospital and nursing school are on one parcel in the NRHP eligible Third Ward Historic District.
International Harvester Company (Texas Mattress Makers), 4901 Navigation Boulevard	Eligible	Industrial	Criterion A in the area of Commerce local level.
Western Electric Company (Harris County Sheriff Offices), 601 Lockwood	Eligible	Art Deco building	Criteria A in the area of Commerce at the local level of significance. Criterion C in the area of Architecture local level.
Kashmere Gardens Elementary School, 4901 Lockwood	Eligible	Elementary School	Criterion A in the area of Social History under the Civil Rights Movement at the local level.



Historic Property Determination of Effects

- No Adverse Effect

Address	Status	Effect	Criterion
1836 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3336 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3334 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3323 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3322 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3311 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3121 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
3101 Richmond Avenue	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy) at 1906 Cleburne Street	Eligible	No Adverse Effect	Criterion C in the area of Architecture local level.
Third Ward Historic District	Eligible	No Adverse Effect	Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development and under Criterion C in the area of Architecture local level.
Houston Negro Hospital at 3402 Ennis Street	Listed	No Adverse Effect	Listed under Criterion A in the area of Ethnic Heritage/Black.
Houston School of Nursing School at 3402 Ennis	Listed	No Adverse Effect	Listed under Criterion A in the area of Ethnic Heritage/Black and Criterion C in the area of Architecture. The hospital and nursing school are on one parcel in the NRHP eligible Third Ward Historic District.
International Harvester Company (Texas Mattress Makers), 4901 Navigation Boulevard	Eligible	No Adverse Effect	Criterion A in the area of Commerce at the local level of significance.
Western Electric Company (Harris County Sheriff Offices), 601 Lockwood	Eligible	No Adverse Effect	Criteria A in the area of Commerce at the local level of significance. Criterion C in the area of Architecture at the local level of significance.
Kashmere Gardens Elementary School, 4901 Lockwood	Eligible	No Adverse Effect	Criterion A in the area of Social History under the Civil Rights Movement at the local level of significance.

Archaeological Survey

- Desktop and archival search for previously-identified resources
- Review of conditions – soil types, prior development and ground disturbance
- Review of project construction activities – what is being constructed, how deep the construction is, proximity to areas of high sensitivity for archaeological resources
- Field work that is needed if resources are anticipated

Archaeological Survey

- Archival research identified portions of Evergreen Negro Cemetery in the APE
- Coordination with THC was made to identify research methods
- FTA/THC agreed on surface scraping to look for evidence of graves
- Burials were identified [redacted]
  - 29 partial burials with scattered remains
  - 1 partial burial with intact remains
  - 3 intact burials

Archaeological Survey

- Graves, and associated burial goods, in Lockwood median have been identified as unmarked and abandoned
- METRO and archaeologists have consulted with PROJECT RESPECT
- Cemetery does not meet National Register Criteria – recommended not eligible
- Site is recommended as eligible for designation as a State Antiquities Landmark (SAL)
- Further coordination will be needed

Draft Archaeological Mitigation Work Plan – Evergreen Negro Cemetery

- Abandoned graves will need to be removed from the median and reinterred elsewhere within the Evergreen Negro Cemetery boundaries
- All work will be coordinated with THC and PROJECT RESPECT
- FTA/METRO are currently seeking comments on this draft mitigation work plan and no work will commence until the report is finalized
  - Texas Antiquities Permit
  - Burial Exhumation
  - Analysis of Recovered Materials
  - Additional Archival Investigations
  - Report of Findings
  - Reinternment of Identified Burials
  - Curation of Paperwork
  - Inadvertent Discovery Plan

Next steps

Consulting parties provide input

Deadline – June 30, 2023

THC Responds to FTA based on input on the Historic & Archaeological Reports

THC can concur, ask for additional Information, or provide additional Information for consideration

Once Section 106 and NEPA is concluded, the project will advance into engineering and final design

METRO will seek a THC Permit for abandoned graves removal

HOW TO SUBMIT COMMENTS

Federal Transit Administration

MEETING MINUTES

2.0	University BRT	Yuhayna Mahmud	• Introduces the University BRT project • Defined what BRT is • Reviewed corridor map and identified places of importance • Reviewed ADA and accessibility improvements that will be made along the project corridor • Identified that they are at 30% completion • Future public engagement will take place in the late summer/ early Fall as the design work starts to take place

3.0	Section 106	Sharon Lacombe	• Provided historical context as to what is Section 106, why it exists, and where it fits into the NEPA process
			• Identified the importance of Section 106
			• Currently focused on where does [the station] go, how can it fit into the street, and is there any additional right-of-way that needs to be purchased
			• Reviewed the criteria that qualifies a property as historic
			• Provided overview of the criteria to be part of the National Registry
			• Outlined the criteria that makes a project have an adverse effect
			• Currently the project does not have any adverse effects because it is using existing right-of-way, no buildings are being torn down, changing any buildings, and the atmospheric conditions will not become out of character
			• 82 properties were surveyed along the project corridor
			  ○ 12 were eligible properties
			  ○ 1 eligible historic district (Third Ward)
			  ○ 2 listed properties

4.0	Archaeological Report	Sharon Lacombe/	• Remains may exist to the left and right of the esplanade.
			  ○ Requesting METRO to pay for the cost of this
			• Question: Are we certain that there are no human remains underneath the road surfaces?
			  ○ No. Additional surveying will need to be done
			• Question: Does the City of Houston have a plan to address whether there are still human remains

MEETING MINUTES

			underneath the pavement of Lockwood? And if so, what to do about it? ○ No they have not. They are waiting to see what METRO does, and then will address as much as they can • Question: Is there, or will be, a high-impact cultural investigation? Because the history of the disregard for these sites have been well-documented since the late 1800's • The archaeological workplan sort-of addresses what happens if we find something, what steps will need to be taken, and how to work with the City of Houston • COMMENT: When they put Lockwood in, they made an effort to relocate, which is good, because often times, no effort is made • How does the community feel about leaving the graves if the gravesites are unidentified? • The cemetery currently does not qualify as historic because of its state and what has been done to it, but that does not mean that it is not important and that is why we developed the archaeological mitigation plan, and part of that plan will include additional research and additional archival research and that is where the national registry is important because it is a giant depository of information for any project that has ever needed federal funding • The site is a state antiquities landmark, so it is protected from a state perspective, and for any work to continue, we would have to have a permit through the state, and we applied for the first one which was to go out and investigate if anything was in the median, and in order to do anything, that would require the use of a permit. The archaeological work plan identifies the steps to obtain that permit. But we are still seeking comments from everyone here, the state, on any additional actions that are not included in the report that should be or need to be addressed.

MEETING MINUTES

			• Sharon walked through the Draft Archaelogical Work Plan, and outlined that no work will commence until the report is finalized
			  ○ Includes contacting the families of those that were buried there.
			  ○ For those graves that were in tact, we also need to keep in mind of any religious ceremony that needs to take plan, and respect those religious beliefs. A ceremonial right must be available.
			• Sharon – they are looking for input. Accepting it verbally, or to the FTA,
			  ○ Also will make sure that the state (THC) receives these comments as well. They will respond on all the input that you provide, as well as their own thoughts and input. They will either confer with their findings, or may come back with extra insight
			  ○ The state wither agrees or lets us know what else needs to be looked at
			• Sharon informed consulting parties that when sending an email about this project, to include the project name in the subject line
			• Yuhayna – confirmed that the draft is ready to be viewed by the consulting parties

5.0	Comments & Questions about the Draft Document	ALL	• Disappointed at the conclusion. Respects that the National Historic Preservation is hard and rigid, but life is not hard and rigid, and Houston is not hard and rigid. It is assumed that Houston is like another city, but we are not. We don't have zoning laws, we don't have restrictions, we don't have things that would have protected that cemetery or two-thirds of my neighbor in the late 50's or early 60's. In our selection of things that we deem significant or important, we should take that into context because I was struck by just how few sites were included in this project corridor. • TXDOT chopped Montrose in half in 1959 and completely changed the cultural, economic, and social character of the neighborhood. This University BRT is set to do the same thing that TXDOT did, on a smaller scale, and leave an

MEETING MINUTES

			orphan neighborhood. We need to take a closer look at that and the cultural impact ○ I want this project to work, but it requires a lot of out-of-the-box design to mitigate the impact • There are hot spots where access in and out of a neighborhood will become an issue • Yuhayna – as we plan our next set of public engagements, it will be about pedestrian access, streetscape, and getting to that level of detail • You have an opportunity, when speaking about the schools (i.e. Kashmere Gardens), to put up the history of the neighborhoods at these local stations ○ Yuhayna – this is the conversation that we need for station design • There is a building that is alleged to be the first Chinese consulate in Houston on Richmond Ave. Not sure that it makes any difference to this project, but when they try to sell it, they advertise that's that what it was • University of St. Thomas should be included as a socially important location • Sharon – there are some properties that were not included in this report. Example – Todd Tellepsen's house is a City of Houston landmark, but not a landmark at the federal level. Will have to comb over the list to ensure that City of Houston designated locations are included in the report ○ Need to check 4602 and 4601 park Drive. That is where the corridor is the widest and is encroaching within the 100ft, so it would be important for us to see how it is impacting the Tellepsen house to avoid questions from the public ○ 4518 park drive • If one of the properties were identified as eligible, what would that change in the process? ○ We would apply the section 106 adverse effect criteria, We would look to see if we were altering the building, destruction, or new audible changes.

MEETING MINUTES

			• There is another regulation called Section 4F (in the US Department of Transportation Act), and it is based on property acquisition. It states that it will not fund any projects that require permanent acquisition unless it met identified conditions. If it was a property that had no adverse effect and requires minor acquisition, then it would be considered de minimis and considered under 4F
			• Part of the evaluation as to why the Eastwood plot is not considered a historic district is a comparison with the Woodland Heights. If the project was butting up against Woodlawn Heights because it already had a City of Houston local historical designation, would you have been expected to have included it in the list of properties considered eligible?
			  ○ They would have to take it through the survey process to make that determination
			  ○ If It was not historic, we would still look at the projects before, during, and after the same timeframe that the developer did to look at that comparison and see which one has more significance and rises to the higher level and the best example of that persons work, and/or is there more people of note or events that can be shown and which one does it better. So yes, it did not have to be historic to have that comparative analysis
			• Question, if Woodland Heights was butting against this project, would they have gotten designation of historical district, in the same way that Third Ward has
			  ○ Third Ward was already determined eligible from two different surveys with the boundaries set, so I just used that information. And for Woodlawn, it was not adjacent to the project. When I came up to Eastwood, I saw all these cute bungalows, and I had to take a close look at it to make sure that it was all in tact and met the regulations of the national register. And just because I determined

MEETING MINUTES

			that it was not eligible for the national registry, does not mean that it could not meet local historical designation. So on Woodlawn, they would have to drive through and actually look at it to make a determination if it would be eligible, but going on the criteria that is a current district, it would have already been listed and I would not have gone further into it. I would have just treated it like Third Ward. Already determined that it was listed and moved on • Is it an either/ or when looking at East Heights? Looking for the best of the developer, not both? Is that fair to say? There is not a scenario where both end up classifying. ○ It could happen if you had enough buildings intact that are by the same developer, I could see a chance that both could be eligible for the national registry, but it would really have to be intact. Unfortunately, Eastwood was not intact enough for the national registry • This raises another question because the City of Houston only recently passed Heritage Districts Ordinance and specifically designated 5 long neglected, historically black, as heritage districts. We were one of the few big cities in Texas that did not have designated Heritage districts. And so they took in independence Heights, Sunnyside, and that was the big experiment for this Mayor's term. But then the question is if a historic district designated by the City of Houston sort of automatically gets you up the list, and a heritage district doesn't have to exactly conform to the same criteria as a historic district in that they could have lost more of their housing stock, but they represent an area in which there is a consistently defined social character, an unifying neighborhood over a period of time, some historical significance to the development of the city, so I am wondering if Eastwood would not qualify. It would have to apply (it is too late to apply now) (, but it was to, would it qualify as a

MEETING MINUTES

			historic district then it would automatically follow the national guidelines that you were ○ No, Just because you are eligible as a local historical district, does not mean you will necessarily rise to the level of a national historic district. And then for the heritage district, you are really getting into more social history, and does the buildings remain, or are their character identifying features in that heritage district, in that built environment, not just buildings, but the way that it is laid out or used, that a historian can identify. Example, I did a city wide survey in San Antonio, we discovered on the west side of town, there were a bunch of houses that a front addition added to it with a store front window and door, so from a historic point of view, that addition made it not eligible, but from that social side, that represented during a certain time when the area was occupied by the Hispanic community, so there are instances where that would happen. So, if a neighborhood was deemed historical, I would take a deeper dive to see if I could see the physical built environment that reflected the national registry criteria. • Yuhayna – want to take some time to review the link that was provided so that everyone knows how to access the documents • The email that you used to receive the link, that is the one that you use to create an account number and password. Once that is set-up, go back to your email and you will have a "welcome" message, and you can use that link to navigate to the documents • Who is eligible to submit comments? Is it just us as consulting parties, or for example I represent a civic organization, so I represent a membership? What is the limitation? ○ Limitation is that it would be on these reports, on historical and cultural resources.

MEETING MINUTES

			○ Can collect information from the property owners identified in the report • The most important thing is that the consulting parties get the correct information to provide feedback on it. If there are unresolved items that we need to reconvene on, we can do that. If during construction, we uncover some tribal beads (for example), we will meet then. It is dependent on the feedback at this moment. • In the fall, there will be workshops that will help us design the station, and what elements need to be considered. That will be a good opportunity for community members to provide community-specific information to • Arts in Transit Program will be also used in this project to display the history of the community • Any feedback that you have provided since the beginning of the project, we are integrating it into the design, or wherever it is appropriate for it to be integrated • We can see on the maps that there are small taking (i.e. eminent domain), are they as small as they appear? Or are they, a foot, 15ft? What is the scale ○ Yuhayna – in general, it is a few feet, not fifteen feet. There are a few properties that we have identified on the corner where stations are that may be more significant ○ There are some corners that need to be shaved in a bit ○ Yes, we are trying to keep it less than 5 ft, or even 4 ft. That is why we are having these conversations, so we can refine this and minimize that area needed more & reduce the footprint of the project even more • Those with the Menil Family, or those involved with St. Thomas, do they have any involvement? I know that you are coordinating with them, but are they aware of the historic aspects that we are discussing today? ○ Yuhayna – the Menil and St. Thomas did not get an invitation to this conversation

MEETING MINUTES

			○ Both of them are in Montrose. The project along Richmond borders 8 different neighborhoods that are historic, or could become historic (if they sought after it) ○ The Menil were involved earlier on and wanted to make sure that they had access to their properties • The ones that are across the street from the Pit Room and Cadente, where this place in Houston could we allow developments to be built on the sidewalk. Townhomes that were acquired later, the city thought that less than 36" for a sidewalk, directly abutting the curb was an appropriate variance. So it's done, its built, and it's been there for at least 20 years, and now it is a part of the University of St. Thomas, so I do not think that, I mean it is a very tight spot on the road, but it is also a high pedestrian area. So, from a historic point of view, I don't think there is much that we can do. And for the Menil, most of their historical significance is in the bungalows and are several blocks away from that. They demolished the apartments on 1400 for green space. • Why was Wheatly High School and McReynolds Junior High left out of the list for Kashmere Gardens ○ I know one of the schools was modern and did not fit the time frame ○ Because they rebuilt the school ○ Not sure why the other one was left off. ○ Might not have any ABE taken from it, so I would not have surveyed it. No right away needed from it, so might have been left off ○ Will follow up to confirm the reasoning ○ I was looking at my maps to verify that. I do remember that it was on the list and I looked at it again. I believe it was just behind the APE, but we should have marked that on the map if it was listed. Will double check
6.0	Action Items/ Next Steps	ALL	• It is still considered a draft, and you can share it as feedback is being accepted. We are under a 30-

MEETING MINUTES

			day review and want to be responsive to comments and questions. Once the 30-day closes, then they will integrate the comments. Then the state reviews with their comments, then the federal agency will review and provide guidance on how to finalize • Advised the consulting parties to not make this draft public as there is sensitive information included in the report • Danielle – can you confirm why the Tellepsen house was left off, please share that with me.

METRORapid University (BRT) Corridor Project
Cultural Resources Response to Consulting Party Questions
June 1, 2023, Meeting

1. Comment on no social history on buildings/neighborhood of Montrose HD and Greater Montrose.
    a. Montrose HD is in Segment 2. Segment 2 was previously surveyed and coordinated with THC in 2006.
    b. The current survey recorded only resources constructed between 1963 and 1977.
    c. The southern boundary of the Montrose HD was located outside the APE.
    d. The Montrose Historic District Period of Significance is 1900-1941 (www.houston.gov). Reassessing the developmental history and district boundaries was outside the scope of the BRT project.
2. No info regarding rumored Chinese Consulate (circa 1960s occupation) in 700 blk of Richmond.
    a. NRHP Criteria A is the association of events and trends and is difficult to identify in a Windshield or Reconnaissance Survey as the building's exterior usually does not provide a physical feature associated with its past association.
    b. Based on this comment, project historians researched the Chinese Consulate in Houston and identified that the consulate was not opened until 1979 when then Chinese leader Deng Xiaoping visited the city and was the first Chinese consulate in the USA (ABC 2020).
        i. The survey end date was 1977 and the Chinese Consulate did not open until 1979.
        ii. As of 2020, the Chinese Consulate was 3417 Montrose outside the APE. A quick internet search did not reveal a previous address.
        iii. Without the address on Richmond, the historian is unable to determine how long the Chinese Consulate was located at their first address and therefore if the that building would have significance based on its association with the Chinese Consulate.
3. St Thomas University grounds abut Richmond Avenue and no discussion provided regarding the University.
    a. Campus is located between Yupon, Richmond, Montrose, and Alabama streets. Per university campus interactive map, 4218 Yoakum, Sullivan Hall, is the only University building abutting Richmond Avenue. Using Google maps, Sullivan Hall was a house constructed in the 1920s and should have been assessed in the 2007 survey.
4. Greater Eastwood – 4518 Park Drive landmark shown on Study Area map, but not on survey map and not discussed.
    a. Per survey map, 4518 Park just outside APE. Results map does show APE touches rear of property lot. The base aerial map and the width of line can change from when a survey is conducted and the final map completed. Historians were aware of the house as evident in the Study Area map.
    b. Since the determination was for NRHP listed or eligible buildings, local landmarks and/or local historic districts were not shown on survey result maps.
5. Greater Eastwood – 4602 Park and 4601 Park not marked on map.

a. 4601 Park is a modern building, constructed circa 1995.
b. 4602 Park is a Craftsman bungalow and was just outside the APE according to the survey map.

6. Why were Wheatly High School and McReynolds school not discussed in the survey?
    a. Wheatly High School is two blocks west of Lockwood Avenue and therefore outside the APE.
    b. McReynolds Middle School is 1 ½ blocks east of Lockwood Avenue and therefore outside the APE.
7. Question was asked regarding additional future work for the Evergreen Negro Cemetery.
    a. Part of the additional work for the Evergreen Negro Cemetery includes supplementary archival investigations to identify the plot owners, if possible. The team will work with local historians and Project Respect to obtain and incorporate the information.
8. Edit to report submitted June 2, 2023: "The heading above the photo of the International Harvester Building lists the address as 4901 Navigation. The correct address is 4619 Navigation."

EASTWOOD
CIVIC ASSOCIATION

July 13, 2022

Jeanette De Los Santos
Public Affairs Representative
Metro Transit Authority of Harris County
1900 Main Street, 11th Floor
Houston, Texas 77002

RE: Eastwood Civic Association's conditions of support for METRORapid University Corridor

Ms. De Los Santos,

I write to you as President of the Eastwood Civic Association, which represents over 2,400 homes in 19 subdivisions, including the historic communities of Eastwood, Broadmoor and Jackson Court. Many of these subdivisions are in close proximity to Segment 4 of the MetroRapid University Corridor that is proposed to travel Lockwood Drive from the Eastwood Transit Center to Fifth Ward/Denver Harbor Transit Center.

We see the value that the planned MetroRapid University Corridor would provide to improve transit connectivity within our community, and we are grateful for the information Metro staff presented to us about this project. We look forward to collaborating on the detailed design of this project. As you move forward with preliminary design, we wish to share our conditions of support for this project:

1. **No overpass**. We recognize, that a BRT line cannot compete with train blockages at the Galveston Subdivision rail line operated by Union Pacific, and must find a way to bypass the train. However, the size and scale of an overpass would be devastating to the connectivity and character of the neighborhood. We respectfully request that METRO present alternative design options for grade-separation at the Union Pacific Rail Line between Harrisburg and Rusk. We are optimistic that an underpass — similar in size and scale to the one located on Polk at Milby — could be a reasonable alternative for the neighborhood. However, we would like more details on size and design before providing our support. We are also open to hearing alternative designs that more broadly address the issues the freight line poses to our neighborhood.

2. **Protect existing esplanade**. As you travel through Greater Eastwood on Lockwood Drive large old growth trees on a wide esplanade greet you, welcoming you to this place that we call home. It is a critical feature to the neighborhood's character and natural environment, and it must be maintained and enhanced by this project.

3. **Prioritize a road diet to accommodate BRT lanes.** A road diet that reduces Lockwood general traffic lanes by one in each direction can provide the necessary BRT lanes, while protecting and maintaining the old growth trees in the existing esplanade. Lockwood is a wide road, and rarely experiences traffic back-ups due to volume, we believe there is plenty of general lane capacity to accommodate this diet now and in the future.

4. **Complete project within existing Right of Way.** With the size of Lockwood, we believe this project can be completed within the existing City of Houston right of way. We urge Metro to complete this project without the acquisition of any additional land from property owners, especially through eminent domain.

5. **Addition of multi-use path.** As a part of the rebuild of Lockwood for this project, we urge Metro to consider the inclusion of two 10' wide multi-use paths for people who walk, bike or roll. The existing sidewalks along Lockwood are in poor condition and they do not offer an accessible experience for all. This will improve last-mile connection and access through the neighborhood to Metro's existing and new transit services.

6. **Maintain regular pedestrian access.** In reviewing other areas where Metro operates their Rapid Bus or Train systems, we've noticed areas where pedestrian crossing is severely limited. We urge Metro to protect pedestrian access across Lockwood at least every 500'.

7. **Softscape.** It is important that this project matches and enhances the existing character of the neighborhood. To do this we would encourage softscaping where existing City right of way allows (i.e. boulevard, micro-parks possible at Rusk and Walker) and that any structures (like underpasses and transit stops) are decorated with unique, visual components (like public art). Together this will help ensure this project fits with, and serves to improve, the natural characteristics of Eastwood as a historic, tree-filled, vibrant, residential neighborhood.

EASTWOOD
CIVIC ASSOCIATION

To support Metro in considering these conditions for support, we've taken some time to create a street design rendering that we feel meets these conditions. Attached you will find renderings of the portion of Segment 3 that runs through our Civic Association boundaries, starting from the Eastwood Transit Center and culminating at Harrisburg.

We hope these designs and this letter serves as an opportunity to continue conversation about this project, and make sure it improves and enhances the wonderful neighborhoods within Greater Eastwood.

Kind Regards,

Danielle Laperriere
President, Eastwood Civic Association

Historical Evergreen Negro Cemetery Vision & Reinternment Plans by

LISA JEDKINS AND THE FRIENDS OF PROJECT R.E.S.P.E.C.T

Pathway To Our Vision

"A morsel of genuine history is a thing so rare as to be always valuable."

Thomas Jefferson, 3rd President of the U.S.

Project R.E.S.P.E.C.T. Inc., (a.k.a. RESPECT) was formed in 1995 by a team of individuals that believe that old historic cemeteries provide a map of community history etched in the terrain and stone of monuments.

This organization has become a catalyst for promoting awareness of the need for preservation of historic abandoned and neglected cemeteries across the state of Texas. The Friends of Project Respect "Why Not Legacy and Heritage Inc" a shared collaborative group will keep the vision alive.

The Initial clean-up of Evergreen Negro Cemetery reveals a remarkable transformation of once known abandoned, neglected, overgrown eyesore to a beautiful peaceful green space.

We will transform this historic place from a blighted cultural icon into a serene green space of beauty, tranquility and community pride. A place rich in heritage, history with its own story to explore and enjoy. Evergreen Negro Cemetery will be a site of remembrance a memorial to the past.

EVERGREEN NEGRO CEMETERY REINTERMENT AND CEMETERY PLANS

- BOUNDARY SURVEY - MUST BE DONE BEFORE FENCING
  COMPLETION DATE - 07/15/2023
- PROTECTIVE FENCING – A RIGID FENCE WILL ADD TO THE SECURITY FOR VISITORS AND EXCLUDE THE INTERFERENCE AND INTRUSION OF UNWANTED VANDALISM AN THEFT
  In Process
- SECURITY LIGHTING – LIGHTING AND SECURITY IN AREA TO ENSURE THAT VISITORS ARE SAVE AND SECURE.
  In Process
- SPHERE BOLLARD – TO SECURE THE GROUNDS AND PROTECT THE MONUMENTS FROM VEHICLE TRAVELING DOWN LOCKWOOD AND MARKET.
  In Process
- AUGUR OR PLUG ON AND OFF GRAVE PROFILES – USING GROUND PENETRATING RADAR, SOIL PROBE OR CADAVER DOGS TO LOCATE UNKNOWN GRAVES
  In Process
- COLUMBARIUM – MEMORIAL FOR REINTERRED UNKNOWN SOULS
  In Process
- Research and find descendants of the people buried in the cemetery
  Ongoing Process

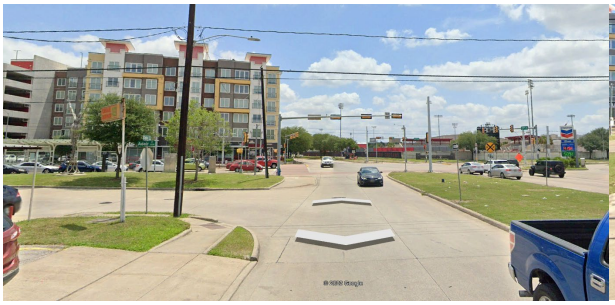
APPENDIX B

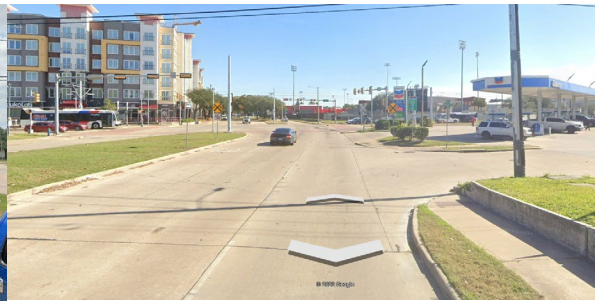
Segment 4 Surveyed Property Table

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 01	4445 Gulf Freeway	No	C. 1967	None	Commerce/business	Alterations include modern windows and siding, plus a change in the fenestration and a side addition.
S4 02a/b	2000 Ernestine Street	No	C. 1970	New Formalism influence	Commerce/warehouse	Alterations include an addition to south façade has no pilasters or pebbledash. Two skywalks connect warehouse S4 02a to warehouse S4 02b. The addition on S4 02a has no siding or pilasters.
S4 03	4443 Pease Street	No	C. 1935	Tudor influence	Domestic/single dwelling	Alterations include modern windows and an enclosed front porch. A ten-foot privacy wood fence abuts part of the front, and the side-yard changes the original setting.
S4 04	4442 Leeland Street	No	C. 1930	Tudor	Domestic/single dwelling	Alterations include a side patio with a half-wall of brick and a metal roof supported by metal columns.
S4 05	619 Telephone Road	No	1977	None	Government/fire station	Does not meet Criteria significance
S4 06	4443 Leeland Street	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include vinyl siding in the gable ends and eaves, modern windows, and extra columns.
S4 07a/b	4444 Bell Street	No	C. 1955	None	Domestic/multiple dwelling	Alterations include modern windows, changes to the central entrance, and a roof over the rear stairs.
S4 08	420 Telephone Road	No	C. 1947	None	Social/meeting hall	Alterations include several flat roof additions on the south façade and a flat roof addition on the west façade, plus additional bricked up windows.
S4 09	4501 Clay Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include the window in the front eaves which has been enclosed with plexiglass, and the one-car garage in the rear yard has modern pressboard siding.
S4 10	4603 Clay Street	Yes	C. 1935	Colonial Revival	Domestic/multiple dwelling	Eastwood Plat. Alterations include the brick has been painted.
S4 11	4602 Polk Street	Yes	C. 1935	Colonial Revival	Domestic/multiple dwelling	Eastwood Plat. Alterations include three dormer windows.
S4 12	4601 Polk Street	No	C. 1935	Minimal Traditional	Domestic/single dwelling	Eastwood Plat. Alterations include modern siding, spindle columns, door, and windows, plus a side addition. There is a detached garage with carport in the rear yard.
S4 13	4603 Polk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows, front door, siding, and a new front porch. Based on exposed rafters on the east façade, an original side porch was enclosed.
S4 14	4602 Woodside Street	No	C. 1948	Ranch (6-plex)	Domestic/multiple dwelling	Eastwood Plat. Alterations include modern windows, doors, balcony railing, and front yard fencing. Apartment complex built after WWII.
S4 15	4550 Woodside Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include an enclosed rear porch.
S4 16	4547 Woodside Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern columns for the porte-cochere.
S4 17a/b	4601 Woodside Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern siding, painted brick, and a large, rear addition.
S4 18	4539 Park Drive	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. The building appears to be intact.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 19	4540 McKinney Street	Yes	C. 1935	Four-plex apt bldg	Domestic/multiple dwelling	Eastwood Plat. Alterations include painted brick, modern doors, a replacement awning, and modern windows. The side yard has a metal privacy fence that parallels S. Lockwood Drive.
S4 20	4602 McKinney Street	Yes	C. 1923	Four-Square	Domestic/multiple dwelling	Eastwood Plat. There were no obvious alterations.
S4 21	4601 McKinney Street	Yes	C. 1930	Four-Square	Domestic/single dwelling	Eastwood Plat. Alterations include a modern door, windows, porch columns, fenestration change on east façade, modern dormer windows, and an addition on the east facade.
S4 22	4539 McKinney Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include painted brick columns, a modern door, imbrication in the gable end, and a loss of railing.
S4 23	4602 Walker Street	No	C. 1955	Apt block	Domestic/multiple dwelling	Eastwood Plat. Alterations include modern windows and a six-foot metal fence. Apartment complex built after WWII.
S4 24	4601 Walker Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Noncontributing. Alterations include modern siding, some modern windows, and a chain-link fence in the front yard.
S4 25	4604 Rusk Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows and front door.
S4 26a	4542 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows and doors, plus a change in the fenestration.
S4 26b	4542 Rusk Street	No	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include modern windows, door, porch, and columns, plus a change in the fenestration.
S4 27	4545 Rusk Street	No	C. 1950/2001	Ranch	Domestic/single dwelling	Eastwood Plat. Alterations include a siding, windows, front porch railing, windows in gable end, and a horizontal wood fence in the front yard.
S4 28	4609 Rusk Street	Yes	C. 1920	Craftsman	Domestic/single dwelling	Eastwood Plat. Alterations include new siding, a modern door, a six-foot metal fence in the front yard, and modified gable ends.
S4 29	4619 Harrisburg Boulevard	No	C. 1930/1992/2009	Mission Revival	Commerce/specialty store	Gas station. Alterations include a change in the fenestration and two side additions on the west façade.
S4 30	311 Lockwood Drive	No	C. 1976	None	Commerce/specialty store	Alterations include modern materials on the canopy and eaves. Detached canopy over gas pumps added after 1985.
S4 31	304 Lockwood Drive	No	1935/2008	None	Commerce/specialty store	Alterations include loss of a front porch, modern windows and doors, and changes in the fenestration and siding.
S4 32	302 Lockwood Drive	No	C. 1970	None	Commerce/ warehouse	Alterations include an addition with a carport has been added to the north façade.
S4 33a/b	220 Lockwood Drive	No	C. 1955	None	Commerce/warehouse	Alterations include a one-story metal carport that has been added to the full-length of the east façade and a modern office building in the southwest corner of the lot (S4 33b).
S4 34	213 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern doors, windows, and a rear addition. There is a detached metal carport in the side yard.
S4 35	211 Lockwood Drive	No	1936/2012	Minimal Traditional	Domestic/single dwelling	Alterations include modern siding, columns, a door, windows, and a metal fence in the front yard. A metal carport is attached to the south façade.
S4 36	209 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, an enclosed front porch, and a change in the fenestration.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 37	207 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, windows, a change in the fenestration, the front door, columns, the railing, and a metal fence in the front yard. A large two-story building was added to the rear façade.
S4 38	205 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern columns and a new front porch railing.
S4 39	203 Lockwood Drive	No	C. 1920	Craftsman	Domestic/vacant-not in use	Alterations include modern columns, a side porch railing, windows, and brick wainscot. Remodeling of the house was occurring when the house was surveyed.
S4 40	202 Lockwood Drive	No	C. 1956	Contemporary influence	Commerce/vacant-not in use	Alterations include modern metal siding, a change in the fenestration, painted brick on the front façade, a modern door, and a rear addition.
S4 41	113 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern windows, new siding, an enclosed porch, missing columns and railings, south and rear additions, plus a change in the fenestration.
S4 42a/b	109 Lockwood Drive	No	1940/2018	Bungalow	Domestic/multiple dwelling	Alterations include modern siding, doors, windows, a front yard privacy fence, and change in the fenestration.
S4 43	110 Lockwood Drive	No	C. 1935	None	Commerce/warehouse	Alterations include modern windows, siding, doors, garage door, a metal roof, and the stepped parapet, plus a change in the fenestration. A metal carport is attached to the south façade.
S4 44	102 Lockwood Drive	No	1936/2011	Colonial Revival	Domestic/multiple dwelling	Alterations include modern siding, windows, and a front door, plus a rear addition and a change in the fenestration.
S4 45	4617 Brady Street	No	1915/2021	Folk Victorian influence	Domestic/single dwelling	Alterations include a new front façade and porch, modern windows, a change in the fenestration, and a metal fence in the front yard
S4 46a	4703 Brady Street	No	C. 1935	Gothic influence	Domestic/single dwelling	Alterations include a modern porch, door, and windows.
S4 46b	4703 Brady Street	No	C. 1935	Bungalow	Domestic/single dwelling	Alterations include a modern metal staircase, boarded up windows, and doors that change in the fenestration.
S4 47	99 Lockwood Drive	No	C. 1938	Minimal Traditional	Domestic/single dwelling	Alterations include modern siding, a door, windows, and front porch columns, plus a change in the fenestration.
S4 48	93-97 Lockwood Drive	No	C. 1973	None	Commerce/specialty store	Alterations include modern siding, a new canopy, and rooftop signs.
S4 49	94 Lockwood Drive	No	1925/1955	Bungalow	Domestic/single dwelling	Alterations include a new front façade that changes the look and feel of the house, and a detached garage in the rear yard.
S4 50	4616 Canal Street	No	1977/2018	None	Commerce/specialty store	Alterations include a modern façade, siding, roof, windows, and a change in the fenestration.
S4 51	91 Lockwood Drive	No	C. 1973	None	Commerce/specialty store	Alterations include modern siding, windows, and door, plus a change in the fenestration.
S4 52	4719 Canal Street	No	C. 1950/2000	None	Religion/religious facility	Alterations include modern siding, windows, architectural ornamentation on the frieze, a rooftop sculpture, and a metal fence with stone columns.
S4 53	215 Lockwood Drive	No	C. 1920	None	Commerce/warehouse	Alterations include metal siding on the north façade, a rear metal canopy addition, a bricked-up door and window, and a change in the fenestration.
S4 54	4707 Avenue I	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include modern siding, windows, and a door, a small rear addition, plus a change in the fenestration change.





Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 55	301 Lockwood Drive	No	C. 1935	Minimal Traditional	Domestic/single dwelling	Alterations include a modern door, windows, and a column plus a change in the fenestration. There have been multiple rear additions and a carport has been added to the rear façade. The metal sheeting on the side yard and the metal and wood fence in the front yard changes the setting.
S4 56	303 Lockwood Drive	No	C. 1930	Minimal Traditional	Domestic/single dwelling	Alterations include modern: windows, a front door, and a new front porch.
S4 57	305 Lockwood Drive	No	C. 1910	Folk Victorian	Domestic/single dwelling	Alterations include modern siding, a front porch, windows, a door, and a change in the fenestration.
S4 58	307 Lockwood Drive	No	C. 1920	Craftsman	Domestic/multiple dwelling	Alterations include modern siding, windows, and a porch railing.
S4 59	335 N Burr Street	No	C. 1930	Bungalow	Domestic/single dwelling	Alterations include modern columns, railing, windows, siding, and an attached carport to the south façade.
S4 60	333 Lockwood Drive	No	C. 1978	New Formalism	Government/courthouse	Harris County Courthouse Annex 39. Alterations include bricked up openings thus changing the fenestration.
S4 61	4619 Navigation Boulevard	Yes	1939	Art Deco influence	Industry/manufacturing facility	Alterations include bricked-up windows on the first floor changing the fenestration and new windows on the second floor. Interior rooms and materials are mostly intact.
S4 62	601 Lockwood Drive	Yes	1948	Art Deco	Government/government offices	Alterations include the entrance door and sidelights and some modern windows.
S4 63	Lockwood @ Armour Dr	No	C. 1975	Water Treatment Plant	Government/vacant - not in use	Not Eligible: lacks integrity of materials, design, workmanship, and association.
S4 64	750 Lockwood Drive	No	1950	Quonset Hut	Industry/manufacturing facility	Per Mr. Zaveri, office manager, the flat roof warehouses indicate the portion of the building reconstructed after a fire.
S4 65a-f	865 Lockwood Drive	No	C. 1953/1973	None	Industry/manufacturing facility	Alterations include modern windows, awnings, a roof, and a door, plus a rear addition attaching the office to the warehouse.
S4 66a-d	900 Lockwood Drive	No	C. 1953/1970	None	Industry/manufacturing facility	Alterations to the office include modern windows. The warehouses have had multiple additions through the years thus changing design and setting.
S4 67	951 Lockwood Drive	No	C. 1953/1957	None	Commerce/vacant-not in use	Alterations include the front addition, a modern garage door, missing windows, and a change in the fenestration.
S4 68	5515 Clinton Drive	No	C. 1936/1965	None	Commerce/warehouse	Alterations include a two-story rear façade and multiple additions on the east façade.
S4 69	1010 Lockwood Drive	No	C. 1942	None	Commerce/warehouse	Alterations include a new side porch and modern windows.
S4 70	1020, 1040, and 1060 Lockwood Drive	No	C. 1975	None	Commerce/warehouse	Alterations some modern loading docks and windows, plus a change in the fenestration.
S4 71	1025 Lockwood Drive	No	1926/2014	None	Industry/manufacturing facility	Alterations to the office include modern siding, windows, and awnings. Alterations to the warehouses include covered windows and openings, a modern roof (c. 2014 and 2016), and a change in the fenestration.
S4 72a/b	1111 Lockwood Drive	No	1956/1968	None	Industry/manufacturing facility	Alterations include an addition to the south façade. A modern raised parapet covers the front facade of two gable-roof warehouses removing integrity of materials, and design. The addition of new buildings reduces integrity of setting.

Site ID#	Address	NRHP Eligible	Year Built	Style	Function/Use	Notes/Alterations
S4 73	1110 Lockwood Drive	No	1947/1978	None	Commerce/warehouse	Alterations include a modern roof to the office.
S4 74	1120 Lockwood Drive	No	1950/1990	None	Commerce/warehouse	Alterations include enclosed bays and modern windows.
S4 75	1140 Lockwood Drive	No	C. 1960	None	Commerce/warehouse	Alterations include a new roof and rear additions.
S4 76	5438 Margarita Street	No	C. 1930	Craftsman	Domestic/single dwelling	Alterations include modern siding, windows, and door.
S4 77	1203 Lockwood Drive	No	C. 1966	None	Commerce/vacant-not in use	Alterations include boarded up door and windows, and modern metal siding.
S4 78	1202 Lockwood Drive	No	1949/2007	None	Commerce/restaurant	Alterations include a side addition, a modern roof, painted brick, enclosed windows, plus a change in the fenestration.
S4 79	5507 Arapahoe Street	No	C. 1928	Bungalow	Domestic/single dwelling	Alterations include modern siding, door, windows, skirting, and columns.
S4 80	1217 Lockwood Drive	No	C. 1965	None	Commerce/vacant-not in use	Alterations include painted brick, bricked up windows, and a change in the fenestration.
S4 81	5438 San Jose Street	No	C. 1925	Craftsman	Domestic/single dwelling	Alterations include modern windows.
S4 82	Lockwood @ Market St	N/A	1893	Evergreen Cemetery	Funerary/cemetary	Per THC an Intensive Level Survey is needed to determine NRHP eligiblity. Because no additional right-of-way is proposed to be acquired from the cemetery, if the cemetery is treated as eligible for listing in the National Register and any potential effects on the cemetery are taken into account, no further evaluation would be required at this time (THC 202308803, June 2023)

APPENDIX C-3 – Archaeological Survey and Archaeology Mitigation Work Plan

METRORapid University Corridor

ARCHAEOLOGICAL SURVEY

Texas Antiquities Permit 30784

Draft Technical Report
May 22, 2023

Abstract

The Federal Transit Administration (FTA) and METRO are conducting the environmental review process for the METRORapid University BRT Corridor Project (the "Project") in Harris County, Texas in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process, with the FTA as the Federal Lead Agency and the Metropolitan Transit Authority of Houston/Harris County (METRO) as the Local Project Sponsor.

FTA is providing federal financial assistance to METRO and has determined the undertaking has a potential to cause effects, as such Section 106 (36 Code of Federal Regulations [CFR] Part 800) of the National Historic Preservation Act (NHPA) of 1966, as amended, was initiated June 8, 2022. In addition, METRO is considered a political subdivision of the state of Texas; therefore, the Antiquities Code of Texas (ACT); Texas Natural Resources Code [TNRC], Title 9, Chapter 191) and its associated regulations (Texas Administrative Code [TAC] Title 13, Part 2, Chapter 26) also apply to the Project.

This report has been prepared by AmaTerra Environmental, Inc. (AmaTerra) with Mindy Bonine servicing as the Principal Investigator under contract to HNTB Corporation (HNTB) as the Program Manager for the Houston METRORapid Project. The Area of Potential Effect (APE) for archaeological cultural resources is defined as the existing METRO or City of Houston rights-of-way (ROW), with some sections acquiring new ROW to construct and/or expand sidewalks and/or to provide additional lane width or turn lanes. Project engineers expect the typical average depth of impacts to be between zero and five feet (0.0–1.5 meters), although much of the Project would be constructed at or above the existing ground surface and much of the existing roadway has been previously disturbed during prior roadway construction activities. One location, the underpass at Lockwood Drive, would reach a maximum depth of up to or beyond 80 feet (24.4 meters) where piers and foundations would be built. Proposed stations would typically be constructed at or above the existing grade.

On behalf of HNTB Corporation (HNTB) and METRO, AmaTerra Environmental, Inc. (AmaTerra) conducted a desktop survey of the Project APE. Through coordination with THC, AmaTerra determined most of the Project posed little risk of impacting intact significant archaeological deposits due to: 1) disturbances from previous urban development; 2) the proposed Project will be constructed primarily in existing ROW; and 3) proposed new ROW will primarily be for sidewalk improvements with shallow impacts. The Texas Historical Commission (THC) concurred with this analysis and recommendation in June 2022, and archaeological survey was not required for most of the archaeological Project APE (THC Tracking #202210364).

The BRT lanes are planned in the grass median between the north and south bound lanes of Lockwood Drive in proximity to the Evergreen Negro Cemetery identified by the THC in 2009 as a Historic Texas Cemetery (HTC). Historical documents indicate that the Evergreen Negro Cemetery formerly encompassed the area now covered by sections of Lockwood Drive and the median between the northbound and southbound lanes in one contiguous block. Subsequently, Lockwood Drive was constructed and then expanded into a boulevard in the early 1960s.

In December 2022, AmaTerra Environmental, Inc. archaeologists performed an investigation to determine the presence or absence of unmarked burials within the median of the northbound and southbound lanes of Lockwood Drive, located in the Fifth Ward, City of Houston, Texas. The work was conducted in advance of improvements to Lockwood Drive as part of the proposed Metropolitan Transit Authority of Harris County (METRO) University Bus Rapid Transit (BRT) Corridor, Houston Texas. The investigation was conducted to assess if the proposed METRO University Corridor Project (the "Project") would affect any intact burials or burial remnants associated with the Evergreen Negro Cemetery, a registered Texas Historic Cemetery, located on either side of a portion of the proposed Segment 4 route. The work was conducted under Texas Antiquities Permit 30784.

As this investigation documents a cemetery containing human remains, the provisions set forth in the Texas Health and Safety Code (HSC); Title 8, Subtitle C, Chapter 711) also applies.

The findings from the archaeological investigation of the Lockwood Drive median revealed 33 localities that contain evidence of a burial. Archival research indicates the burials could date between ca. 1890 and 1957. These localities included human bone, burial container wood and hardware, or personal items associated with a grave. Of these, three (3) localities contained sufficient human bone to be considered "intact" burials as well as one (1) locality that contained a "partial" burial. These finds were left in place at the conclusion of fieldwork pending registration as an abandoned cemetery and coordination for the removal of the skeletal remains. This location was given the archaeological site trinomial 41HR1270.

Cemeteries are not ordinarily considered eligible for inclusion in the NRHP unless they meet special requirements, and cemetery grounds that have been "substantially disinterred" do not meet standards of integrity. Site 41HR1270 does not meet these standards and is not recommended eligible for listing in the National Register of Historic Places (NRHP). However, site 41HR1270 is recommended eligible as a State Antiquities Landmark (SAL) as having state-level information potential and is a unique or rare resource. The site's dates of internment can be used to track African American mortuary practices over time through comparative analysis with other, older cemeteries in the Houston metropolitan area. In addition, there is a direct link between the cemetery and the history of the Fifth Ward community. Data pertaining to not only mortuary practices, but the interplay between historical racial segregation, social justice, and urban development would be informed by research on this cemetery. As the site has almost no associated records, archaeological investigations would be the only way important data could be obtained. The cemetery is also subject to the regulations stipulated in the Texas HSC. As this SAL-eligible resource will be impacted by the proposed Project, mitigation efforts are recommended to offset the proposed impacts as well as comply with the HSC.

1 Introduction

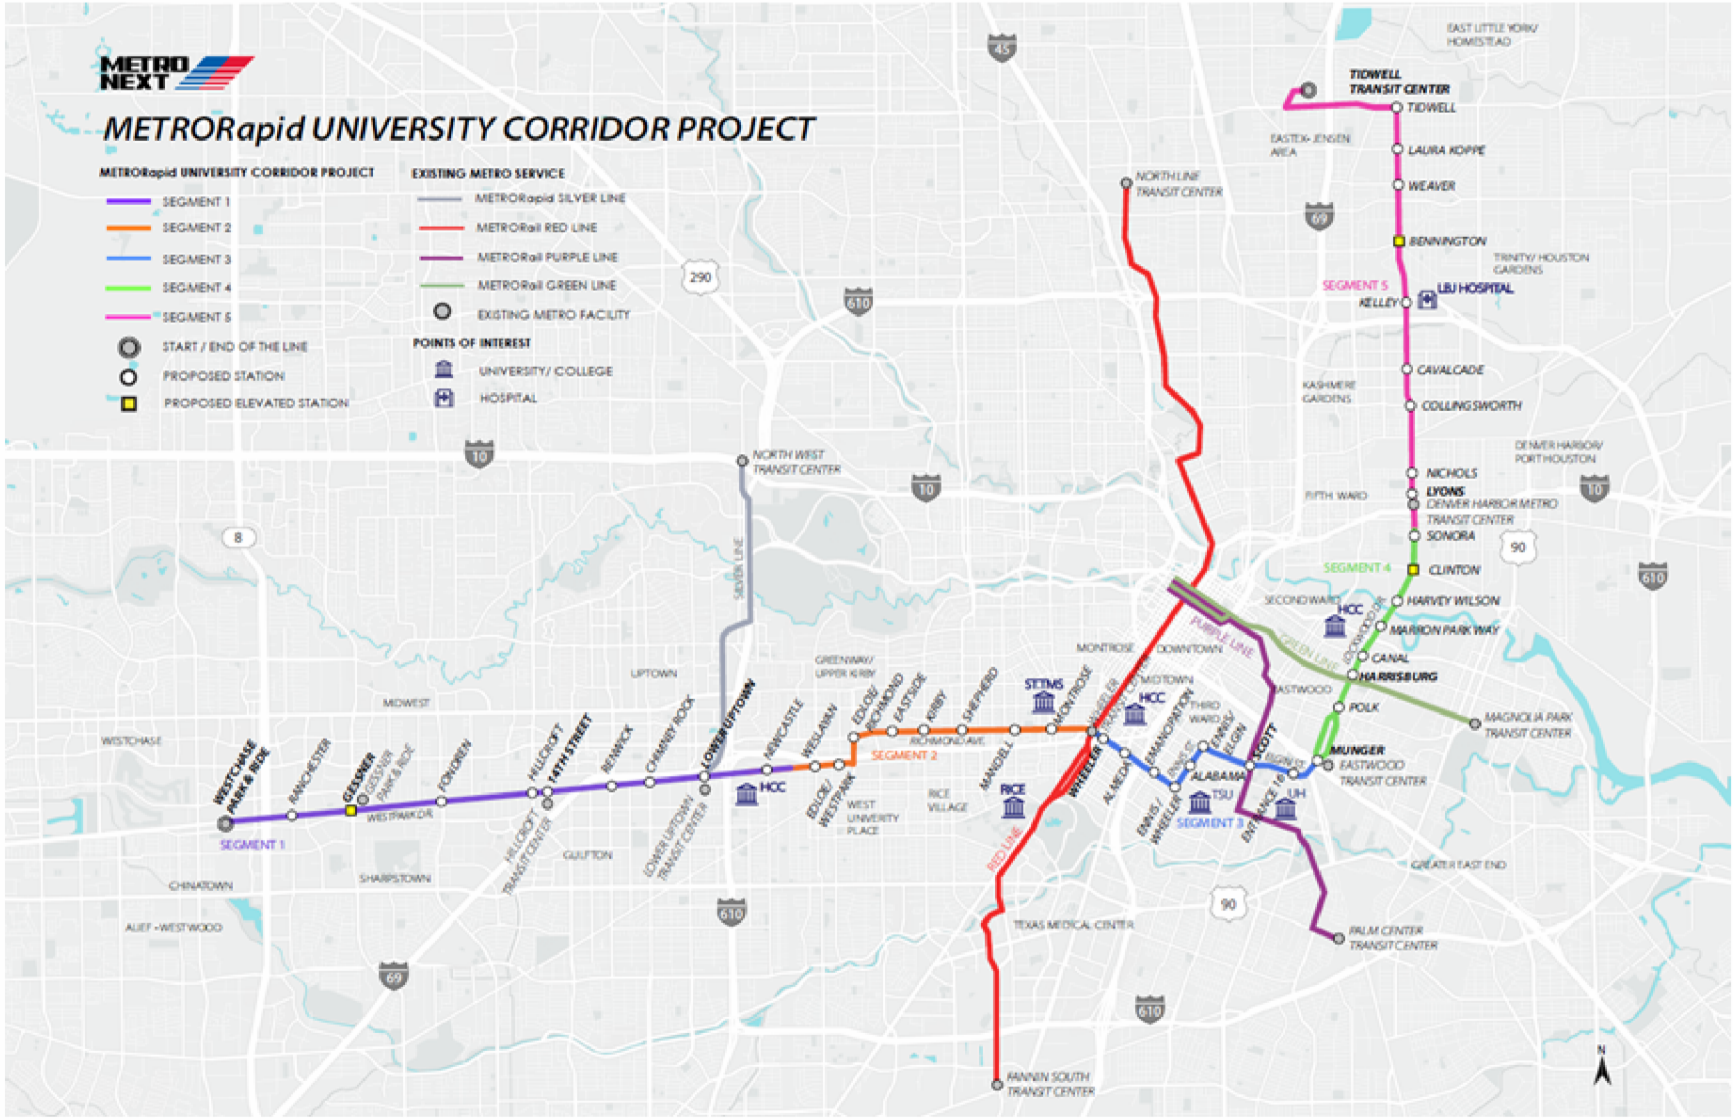
The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

1.1 Purpose of Report

The purpose of this Archaeological Survey Report is to provide compliance with NEPA, Section 106 of the National Historic Preservation Act (NHPA), and the Antiquities Code of Texas (ACT) by identifying archaeological resources eligible for inclusion in the National Register of Historic Places (NRHP) or for listing as a State Antiquities Landmark (SAL) within the project area of potential effect (APE) and determining how the project may affect those resources. Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1. Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.



The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other METRORail, METRORapid, and local bus services. Some stations would be incorporated into existing METRO facilities. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

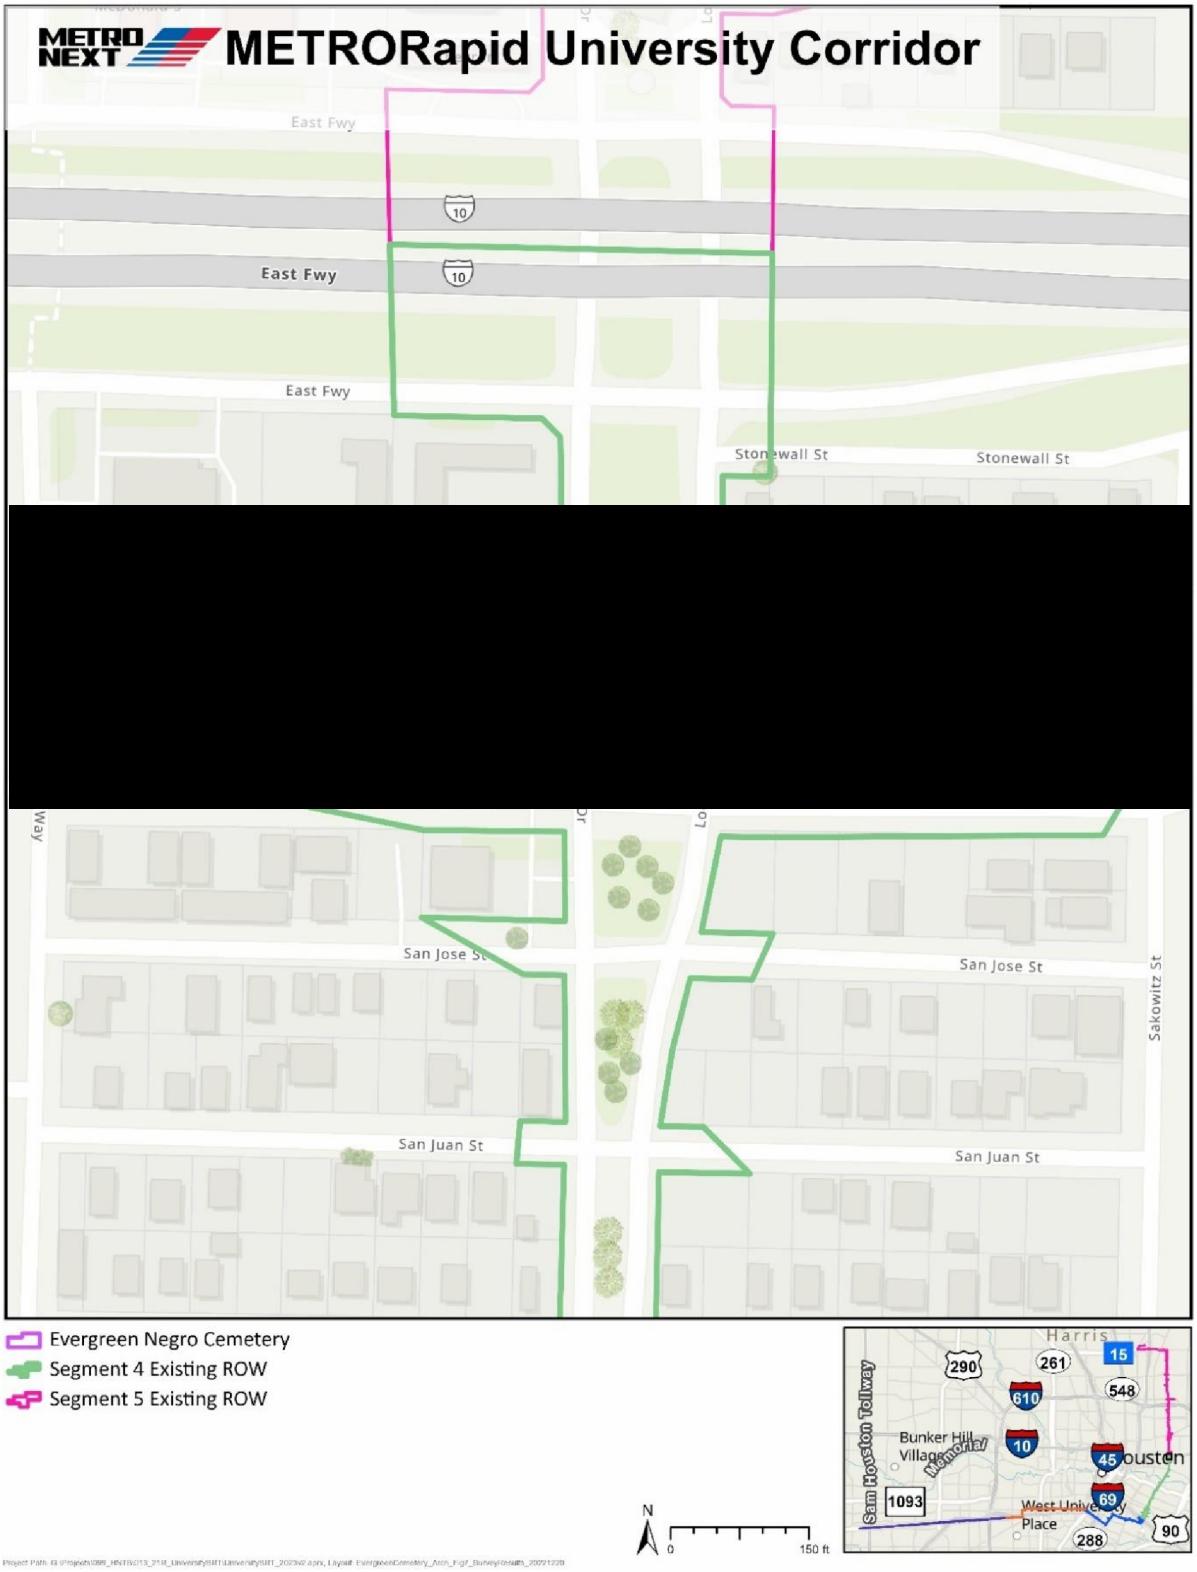
3	Richmond Ave at Main Street (Wheeler Transit Center)	Elgin St at I-45 (Eastwood Transit Center)
4	Elgin St at I-45 (Eastwood Transit Center)	Lockwood Dr at I-10 (Fifth Ward/Denver Harbor Transit center)
5	Lockwood Dr at I-10 (Fifth Ward/Denver Harbor Transit center)	Tidwell Transit Center

Figure 1-1: University Corridor Proposed BRT Alignment

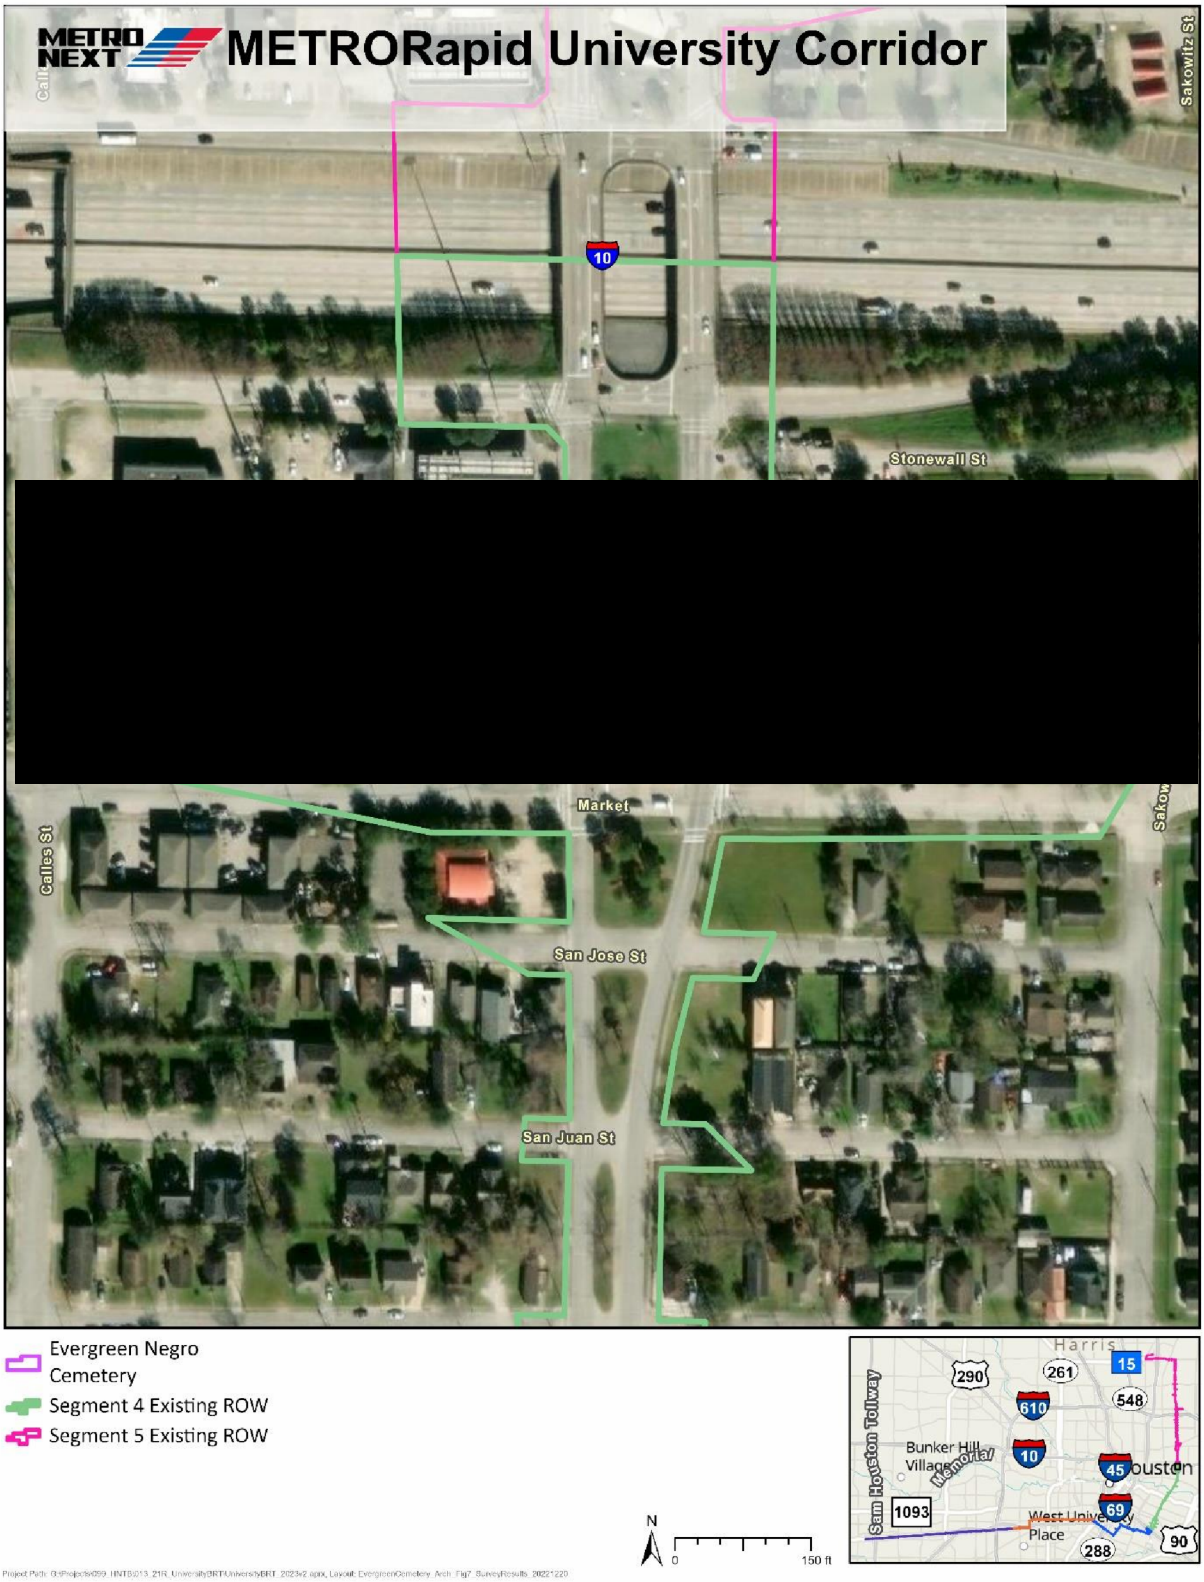
1.2 Archaeological Survey Overview

On behalf of HNTB Corporation (HNTB) and Houston METRO, AmaTerra Environmental, Inc. (AmaTerra) conducted a desktop survey of the Project APE. The APE for archaeological cultural resources is defined as the existing METRO or City of Houston ROW, with some sections acquiring new ROW to construct and/or expand sidewalks and to provide additional lane width or turn lanes. Project engineers expect the average depth of impacts to be between zero and five feet (0.0–1.5 meters), although much of the Project would be constructed at or above the existing ground surface. The maximum depths of impacts would be up to or beyond 80 feet (24.4 meters) where piers and foundations would be built. Proposed stations would typically be constructed at or above the existing grade.



Through coordination with the Texas Historical Commission (THC), AmaTerra determined most of the Project posed little risk of impacting intact significant archaeological deposits due to: 1) disturbances from previous urban development; 2) the proposed Project will be constructed primarily in existing ROW; and 3) proposed new ROW will primarily be for sidewalk improvements with shallow impacts. The THC concurred with this analysis and recommendation in June 2022, and archaeological survey was not required for most of the archaeological Project APE (THC Tracking #202210364) but was required in the vicinity of the Evergreen Negro Cemetery, which had been identified in 2009 as a Historic Texas Cemetery (HTC) by the THC. Therefore, the survey results described in the remainder of this report pertain specifically to investigations conducted in this vicinity.

The BRT lanes are planned in the grass median between the north and south bound lanes of Lockwood Drive that bisect the Evergreen Negro Cemetery. Although no new ROW is planned



Lockwood drive was constructed, and then expanded into a boulevard in the early 1960s.

Figure 1-2: Archaeological APE for the University BRT Line Near the Evergreen Negro Cemetery on a United States Geological Survey (USGS) Topographic Map

Source: USGS 2023.

Figure 1-3: Archaeological APE for the University BRT Line Near the Evergreen Negro Cemetery on a Current Aerial Photograph

Source: USGS Earth Explorer 2023.

Prior to the expansion, the burials within the road ROW and the median were exhumed and reinterred elsewhere. Unfortunately, the records of the exhumation and reinterment have not been located. It is possible that burials may have been overlooked during the reburial efforts associated with the expansion of Lockwood Drive, and the current investigation attempted to determine if this was the case. Trench scraping to locate potential unmarked burials and an archival review of historical impacts to the cemetery was recommended prior to construction in the Project ROW within and adjacent to the Evergreen Negro Cemetery, and a specific scope of work appropriate to this investigation was devised and submitted to the THC for review and approval. Texas Antiquities Permit 30784 was issued by the THC, with Mindy Bonine serving as Principal Investigator.

Fieldwork was conducted December 5-9 and 14-16, 2022. Mindy Bonine led the first week of fieldwork, with Aaron Norment heading up the second week. Archaeologists Cameron Michael and Andrew Milam assisted the team leaders. Archival research was conducted by Mindy Bonine and Travis Trahan, in addition to the post-field analysis of the artifacts and remains.

1.3 Management Summary

Since this Project will occur within lands or easements controlled or managed by a political subdivision of the State of Texas (METRO and the City of Houston), state-level archaeological resource regulatory compliance outlined in the ACT must be followed (Texas Natural Resources Code [TNRC], Title 9, Chapter 191). In addition, the FTA is providing funding for the proposed Project, requiring federal-level cultural resource regulatory oversight outlined in Section 106 of the NHPA of 1966, as amended (36 Code of Federal Regulations [CFR] Part 800). The regulations documented in the Texas Health and Safety Code (HSC; Title 8, Subtitle C, Chapter 711) also apply for this Project as it documents a cemetery containing human remains.

A “Notice of Existence of Abandoned or Unknown Cemetery” form was completed for this portion of the Evergreen Negro Cemetery and submitted to the Harris County Clerk on February 10, 2023. This form identifies the location and disposition of the abandoned section of the cemetery. As improvements to the land cannot occur within a cemetery boundary (HSC §711.010), the City of Houston has elected to petition the district court for a removal of the cemetery designation for the area covered by Lockwood Drive and the road median. This action will involve the removal of the

[redacted]

1.4 Report Format

This report consists of five chapters. Chapter 2 includes the environmental and cultural setting for the Evergreen Negro Cemetery area, including ecoregion, geology, and soils; previous archaeological investigations in the area; and describes the cultural history of Houston and the Fifth Ward. Chapter 3 describes the methods for the field investigations, archival research, laboratory analysis, interview, and curation. Chapter 4 documents the results of the archival research and archaeological investigations. Chapter 5 provides a summary and recommendations for future work.

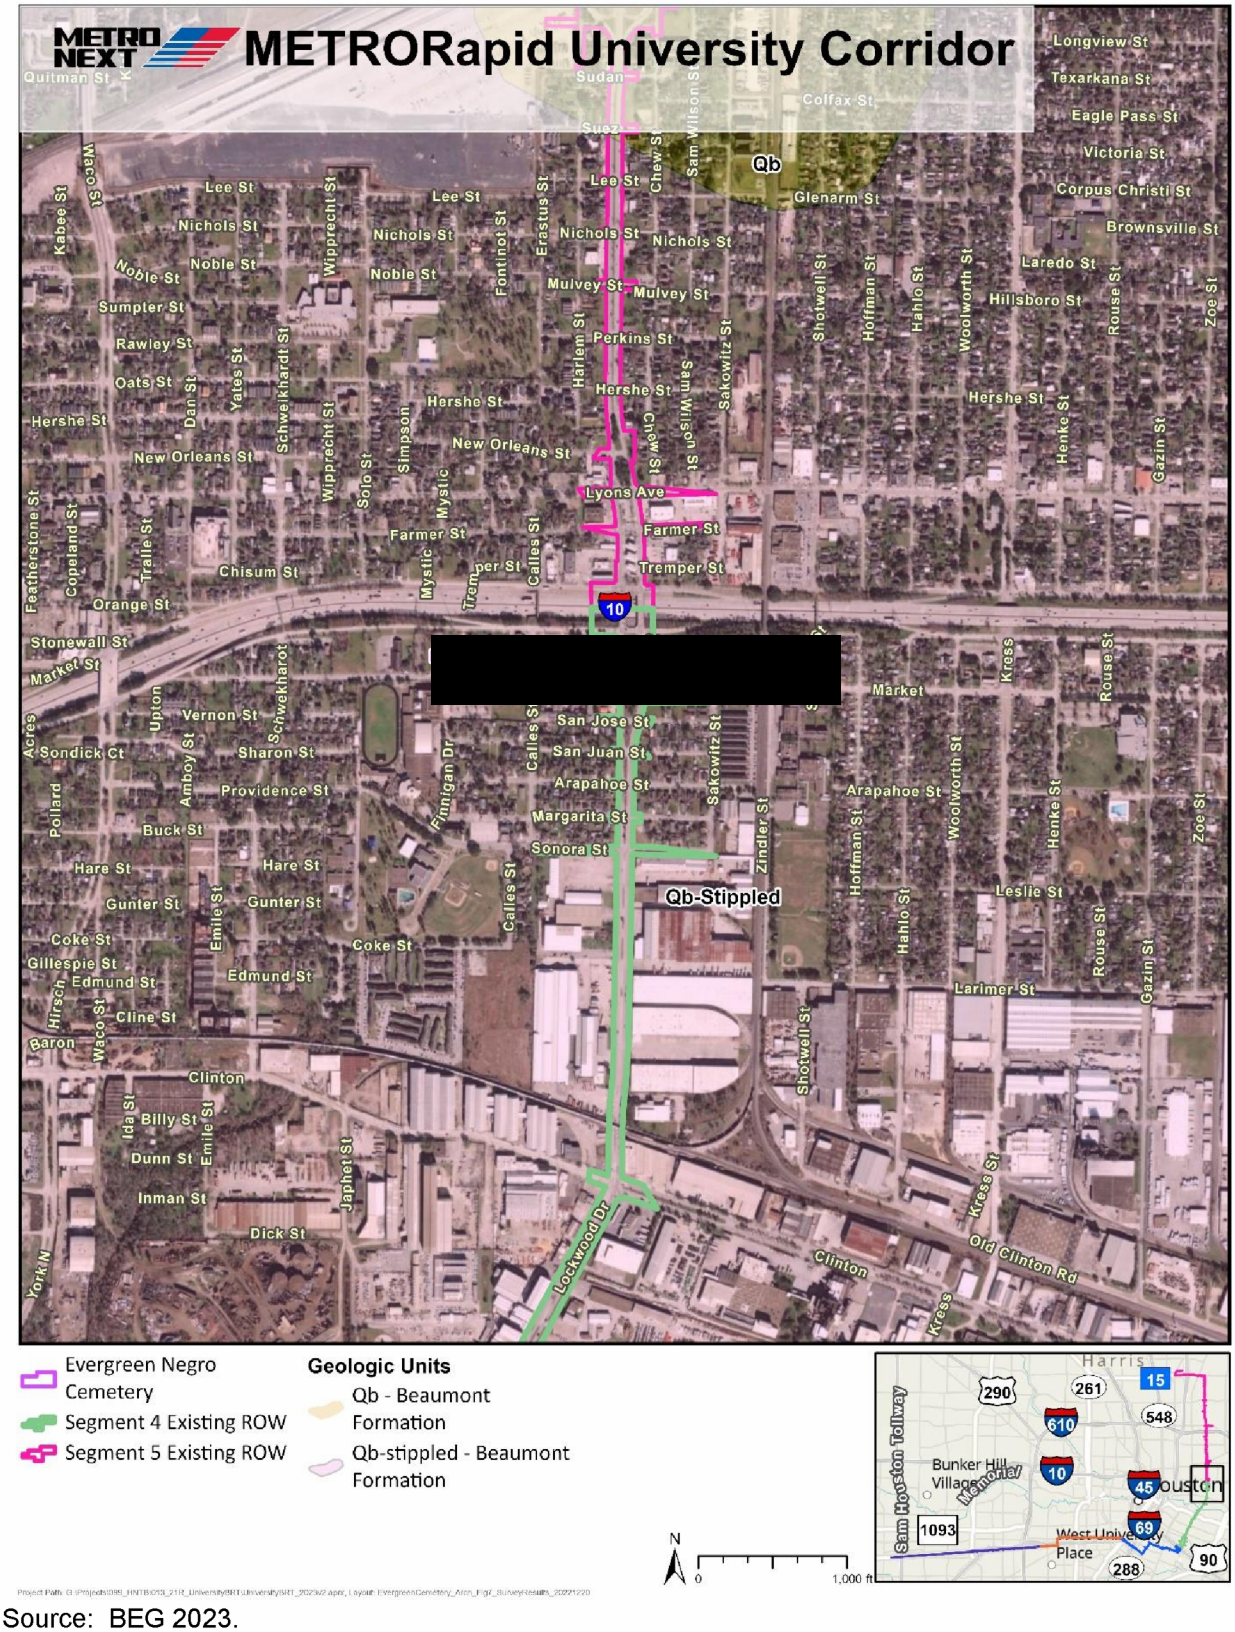
2 Environmental and Cultural Background

2.1 Ecoregion

The cemetery is in the Northern Humid Gulf Coastal Prairies level IV ecoregion, a subregion of the Western Gulf Coastal Plain level IV ecoregion. The region is characterized by its mostly flat, gently sloping coastal plains. Historically the vegetation has been made up of tallgrass grasslands with clusters of oaks and some post oak savannas present along its boundary with the East Central Texas Plains ecoregion. The northern area of the region is similar to the floodplain forests of the South-Central Plains which it borders, while the southern portion has fewer bottomland oaks and hickories and its overstory consists primarily of pecan, sugar hackberry, ash, southern live oak, and cedar elm. The soils are primarily Alfisols (clayey soils formed under forest cover) and Vertisols (clay-rich soils that shrink and swell during dry and wet periods; Griffith et al. 2007).

The region has been heavily altered by indigenous occupation as well as by wild cattle and horse grazing, domesticated livestock grazing, burning, drainage canals, stream channelization, invasive species, and most recently urban and industrial development Animal species historically present within the area include pronghorn, white-tailed deer, red wolves, prairie chickens, and bison (Griffith et al. 2007).

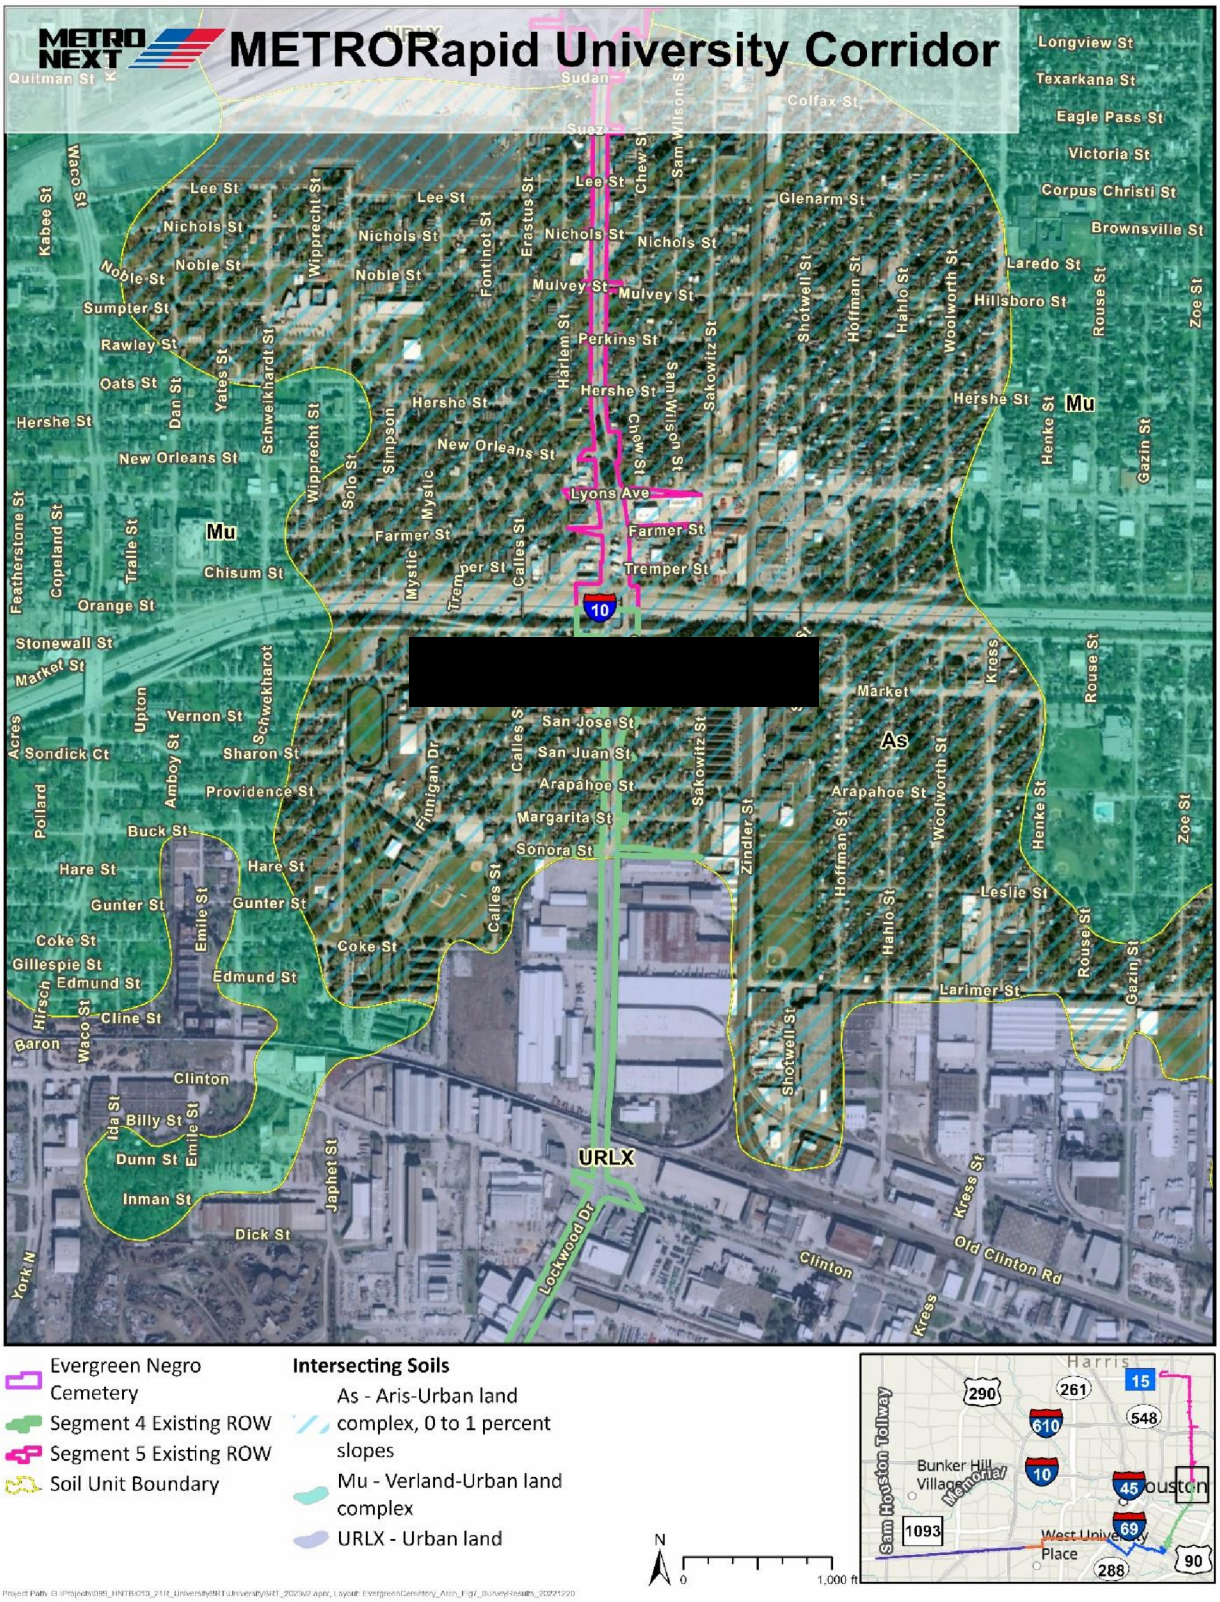
2.2 Geology and Soils



According to the Geologic Atlas of Texas (Bureau of Economic Geology [BEG] 2023), the cemetery overlies late Pleistocene aged Beaumont Formation deposit predominantly made up of clay and mud of low permeability with minor components of silt and fine sand (**Figure 2-1**; USGS 2023).

The only soil series present within the cemetery location is the Aris-Urban land complex (0-1 percent slopes; **Figure 2-2**). This series is made up of very deep and poorly drained soils formed in loamy fluviomarine deposits derived from the Beaumont Formation (U.S. Department of Agriculture-Natural Resources Conservation Commission [USDA NRCS] 2023).

2.3 Previous Archaeological Investigations



Background research for this investigation consisted of an online search through the THC's Archeological Sites Atlas (Atlas) and a review of historical period maps and aerial photographs. Researchers focused on the identification of previous surveys, archaeological sites, Registered Texas Historic Landmarks (RTHLs), sites listed in the NRHP, sites listed as SALs, cemeteries, and historical markers within 500 meters (0.31 mile) of the survey area (**Figure 2-3**). No surveys have been undertaken within 500 meters of the survey area. No archaeological sites, RTHLs, NRHP properties, SALs, or historical markers exist within 500 meters of the survey area. Evergreen Negro Cemetery itself is the only previously documented cultural resource within the 500-meter buffer.

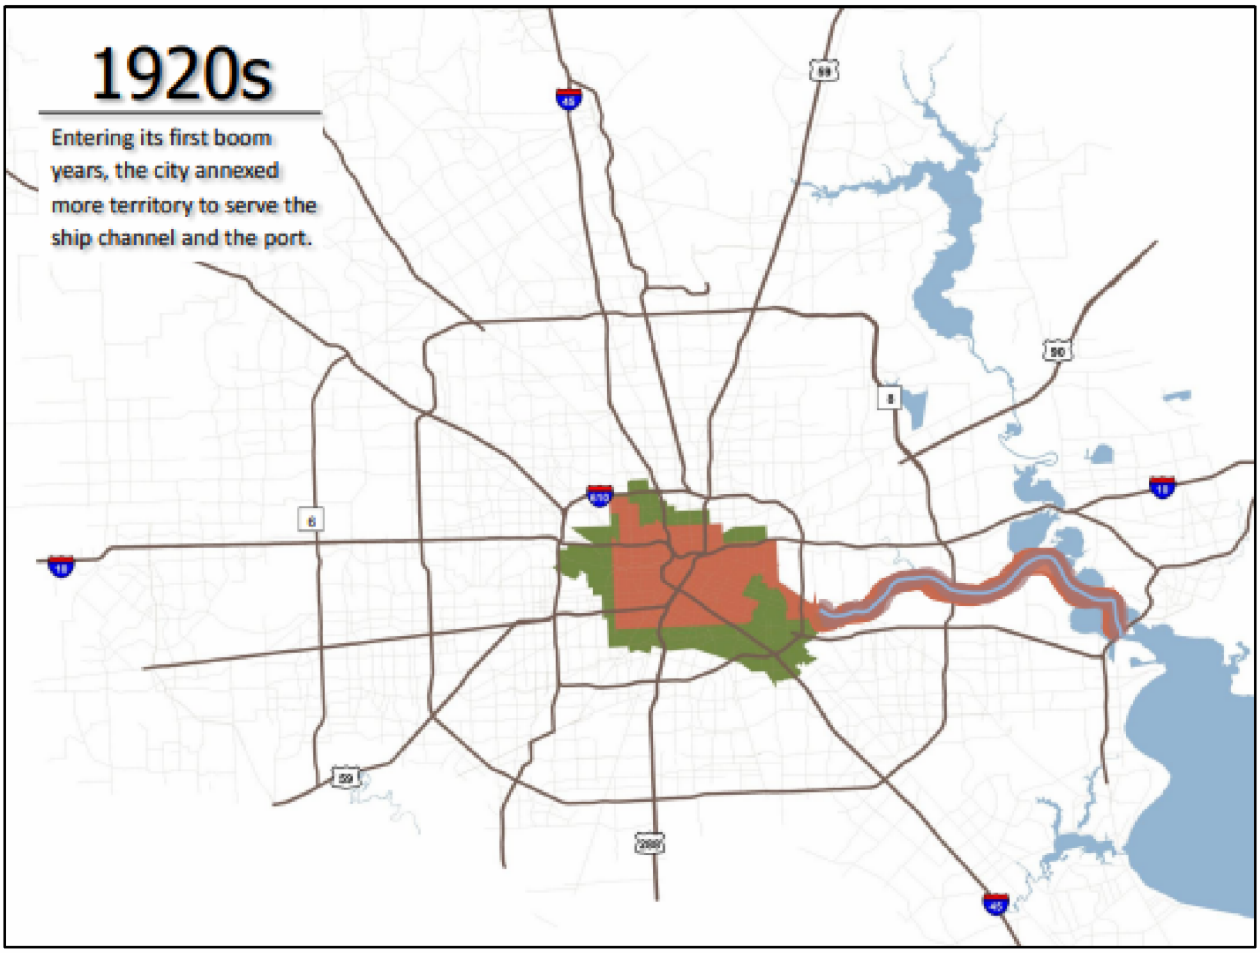
2.4 Cultural Historical Context

As this report addresses historical resources dating to the late nineteenth century and early twentieth century, the following historical context documents the time period from the founding of Houston in 1837 through the 1970s. The history of the Greater Fifth Ward and the Evergreen Negro Cemetery follows the narrative of the City of Houston.

2.4.1 City of Houston

The City of Houston was the brainchild of two brothers, Augustus Chapman Allen and John Kirby Allen, who named the townsite after Sam Houston. The town of Houston was surveyed, then mapped in a gridiron plan and incorporated in 1837 (McComb 2022). Houston established four wards, all centered from a central point in downtown. Community members were certain the town would become an excellent interior coastal commercial hub with access to both ships from Buffalo Bayou and land transport networks (McComb 2022). However, the city warred with Galveston for trade and transportation supremacy in the region until the 1900 hurricane leveled Galveston Island. Houston, with its sheltered seaport farther inland, took economic control of the region, eventually becoming Texas' major gulf port (Francaviglia 1998:263–267).



By 1900 Houston was nine square miles with a population of 40,000. Discovery of oil at Spindletop near Beaumont in 1901 in conjunction with the Buffalo Bayou Ship Channel's access to the Gulf of Mexico made Houston an obvious choice for oil companies to locate their business. A migration of Mexican citizens came to Houston in the early 1900s seeking work at the railroads and ship channel. The immigrants primarily settled in the Second Ward or El Segundo Barrio (Rosales 1981:224). In 1913 the city annexed land adjacent to the center core and along both sides of Buffalo Bayou (Houston Ship Channel) and the population almost doubled to 77,000 (City of Houston 2019). In 1920 the city covered 39 square miles (Kaplan 1981: 180). The demand for oil during World War I kept the economy growing. Annexation, economic growth, and an increase in population continued through the 1920s (**Figure 2-4**).

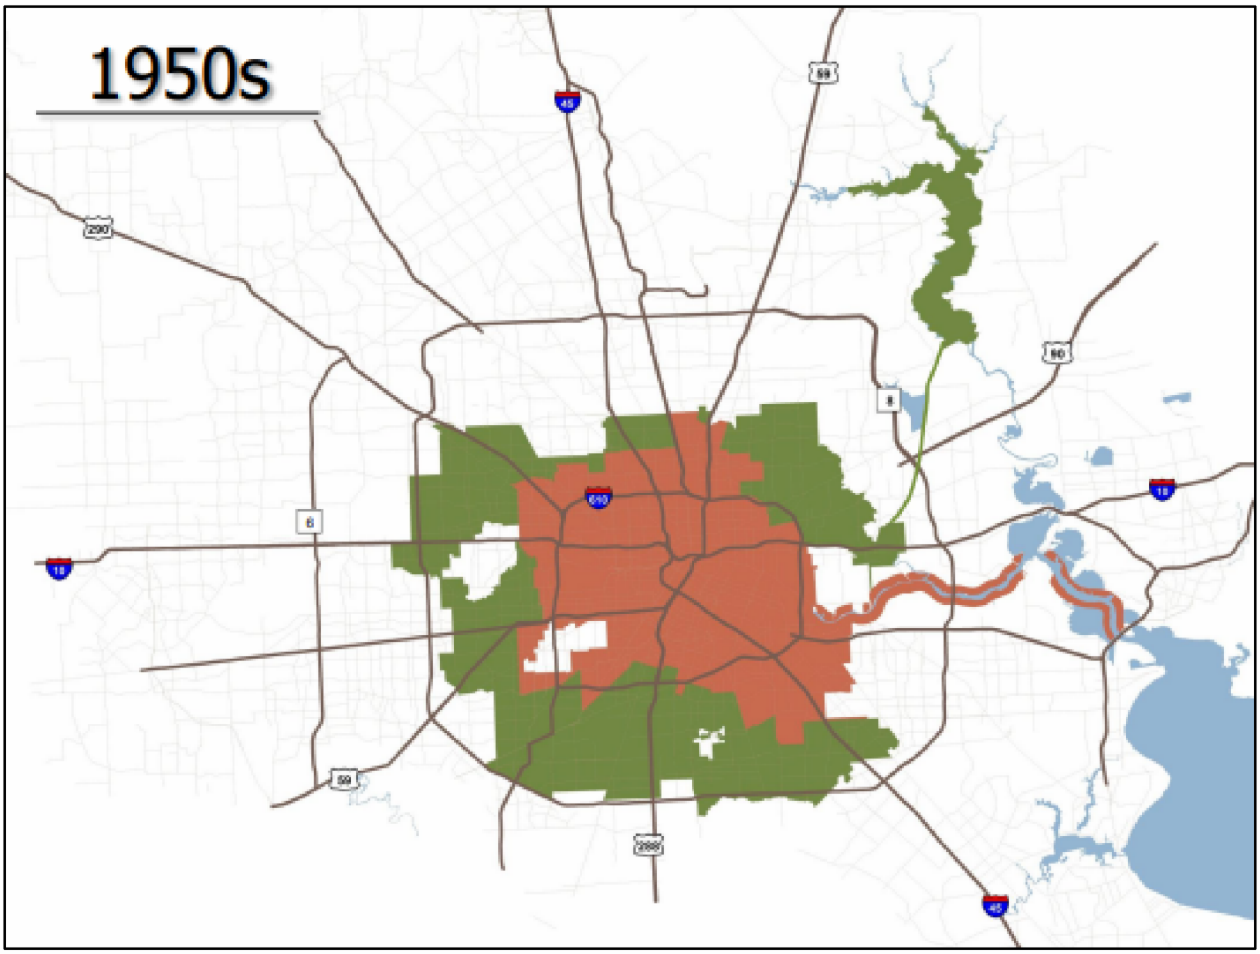
Houston recovered from the Great Depression by 1935 because of its industries and distribution capabilities setting several records that year in export tonnage, telephone connections, and building activities (Wolfe 2011:8-67). With improvements to the Houston Ship Channel, increasing depth and width the entire length, the Chamber of Commerce began an intensive campaign to draw new businesses to the city (Wolfe 2011:8-67). The concentration of oil-related companies in Houston and distribution capabilities via the Houston Ship Channel ensured that Houston and its citizens continued to prosper during World War II.

Between 1940 and 1960, the City of Houston doubled its size twice through land annexation reaching 350 square miles and almost one million residents (**Figure 2-5**). Many buildings, both commercial and residential, were constructed during this time. The lack of zoning allowed properties to develop the land for any use, creating a mix of commercial directly adjacent to residential properties. Houston's oil and shipping industries kept the city's overall economy strong. Growth and development were so rampant that the city placed a moratorium on many parts of Houston due to

insufficient sewage treatment capacity (Fox 1985:14). The growth lasted until oil prices started to fall in the early 1980s.

Figure 2-4: City of Houston Annexation Map Showing 1920s Land Annexation

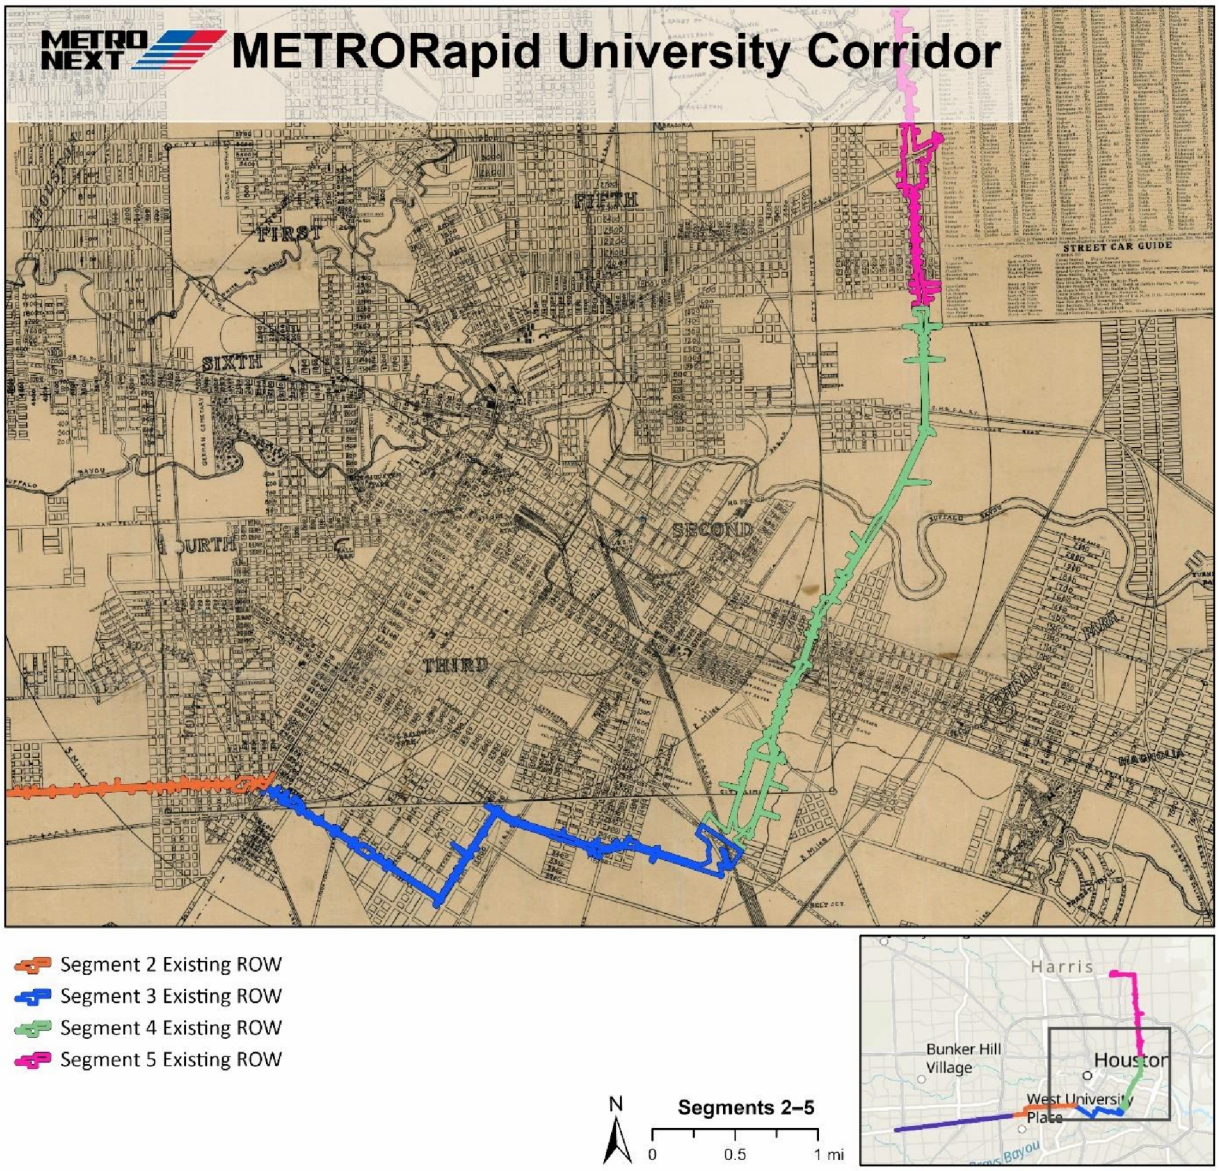
Note: City limits of Houston ca. 1913 depicted in brown, newly annexed land shown in green.
Source: City of Houston Annexation 2019.



African American Settlement (1870–1945)

After the Civil War, Houston experienced population growth with former enslaved persons moving to the city for job opportunities, residing primarily in pockets in the Third and Fourth Wards. By 1872 influential African Americans raised funds and purchased four acres of land to establish the first-ever park for African Americans in Houston, Emancipation Park in the Third Ward (www.texashappens.com). The African American population tripled in 20 years, from 22,929 in 1910 to 66,357 in 1930. During this timeframe Dowling Street became the main commercial corridor owned and patroned by the African American community (www.texashappens.com). Dowling Street was renamed Emancipation Avenue and is in the Third Ward.

The population between Buffalo Bayou and White Oak Bayou became large enough to warrant government representation, thus the Fifth Ward was created from the First and Second Wards in



1866. The rail yard and abutting industries, dependent on rail transportation, were the economic center for jobs in this part of town. In 1870 the Fifth Ward was the only Ward with more African Americans than whites, albeit by a slim margin of 578 to 461 (Pando 2011:34). The Ward system was discontinued in the early 1900s but socio-economic associations with those areas are still recognizable and referenced today (**Figure 2-6**).

Figure 2-5: City of Houston Annexation Map Showing 1950s Land Annexation

Figure 2-6: City of Houston Wards in 1913 with Project Overlay

Source: Wikipedia n.d. map 1913, AmaTerra Environmental, Inc. 2023.

After World War II there was a large shift of population moving from the downtown environs to the suburbs. A specific example of this occurred in the Third Ward. The Jewish population stayed within the inner-city area until the 1950s when suburban development promised larger lots to build upon and, once again, they relocated to be near new synagogues. As they began to move out, a large portion of the growing middle class African American population relocated from the Fourth Ward into the formerly Jewish neighborhoods of the Third Ward. This changed the Third Ward demographics from a mixture of ethnic groups to a predominance of African American residents (Third Ward MPS NRHP nomination E-16).

Civil Rights Movement (1948–1970)

Upon returning home from World War II, financial assistance from the GI Bill afforded African Americans and Mexican Americans new opportunities for education and home ownership. However, they continued to encounter discrimination and the League of United Latin American Citizens Council 60 of Houston (LULAC) became assertive in demanding equality (Rosales 1981:244). After World War II, three landmark court cases helped moved the nation towards desegregation. The 1948 Supreme Court (Shelley v. Kraemer) decision struck down restrictive covenants along racial/ethnic lines, allowing non-Caucasians to rent or purchase property previously denied to them. In 1950, Sweatt v. Painter helped establish a law department at historically black college at Texas Southern University, a Historically Black College, when Heman Sweatt was denied entrance to the University of Texas Law School. The landmark 1954 Brown v. Board of Education decision ruled segregated schools unconstitutional. In 1964 Congress passed the Civil Rights Act prohibiting discrimination based on race, color, religion, sex, or national origin.

These Supreme Court decisions and federal laws did not mean automatic integration. However, with the booming economy after World War II and through the 1970s, African Americans had more opportunities for education, work, and living options. This era also saw white flight to suburbs further from the city's downtown.

Transportation (1874–1978)

Ship Channel

The Allen Brothers chose the town site of Houston because of the water transportation potential of Buffalo Bayou (Sibley 2023). The bayou provided access for steamboats and smaller craft to travel from inland to the Gulf of Texas to transport people and agricultural goods. The Port of Houston was established in 1842 and officially took over maintenance and improvements of the channel. Houston merchants created the Buffalo Bayou Ship Channel Company to improve the channel and bypass Galveston Harbor. Success for the company did not occur until ship and railroad magnate Charles Morgan purchased it and dredged a channel from Clinton, Texas, to Galveston Bay in 1876 (Sibley 2023). Improvements continued in 1909 when Harris County created a navigation district to sell bonds and receive matching funds from the US government (Sibley 2023).

Railroads

With access to the Gulf of Mexico via Houston's ship channel, railroad companies established routes through Houston starting with the Buffalo Bayou, Brazos & Colorado (BBB&C) in 1851 (Willits 2007:2). With the shipping canal enlarged, the Houston Chamber of Commerce adopted the slogan of "Where 17 Railroads Meet the Sea" in the 1920s (Willits 2007:2). Industrial businesses located near the railroads flourished by taking advantage of this transportation option. Over time, rail companies consolidated routes and abandoned lines as vehicle ownership and air travel reduced the need for rail service. Only six railroad lines operated in Houston by 1980 (HSSHP n.d.). Today, Union Pacific Railroad (UPRR) active rail lines and spurs still serve industry in the project area as shown by the map below in portions of Segments 4 and 5 (**Figure 2-7**).

Figure 2-7: Map of Rail Lines and Rail Spurs in Segments 4 and 5

Note: The blue lines represent the rail line while the black dash line follows Lockwood Avenue
Source: TxDOT Texas Railroads 2022.

Streetcars

Houston City Street Railway company is credited with the successful use of streetcars in Houston in 1874 (Baron 2014:68). The initial four lines were longer than the first streetcar routes with one line extending to the old fairgrounds on the south end of town, a mile from downtown. Out-of-state investors purchased the rail system in 1890 and converted the mule drawn system into an electric operation (Baron 2014:70). Seven additional electric lines were added in the next two years spurring construction of buildings along the route (Baron 2014:70-71).

When the ship channel was deepened in 1908, the streetcar service to Harrisburg Boulevard commenced providing easy access to six miles of undeveloped land (Baron 2014:77). The William A. Wilson Company stated in their advertisement that the Eastwood subdivision (Segment 4) could easily be reached by the Harrisburg Line (Wilson 1911:9-10). Construction of new lines in 1913 and 1914 extended to the Third Ward and Fifth Ward including the Lyons Avenue line (Baron 2014:79-80). In 1927, there were 24 routes utilizing 90 miles of track (Baron 2014:86). Increased ownership

of vehicles, competition from jitneys (private vehicles used as taxis), and bus service added to the demise of the streetcar. The last streetcar discontinued service in 1940.

Roadways

As a railroad and sea hub, roadways have always been integral for the movement of goods through the city. Houston had 26 miles of pavement in 1903 and 196 miles of paved streets in 1915 (Papademetrieu 1983:115). Houston's Mayor Oscar Holcombe hired the firm of Hare and Hare in 1924 to prepare a major street and thoroughfare plan (Fox 1985:13), but the plan was not implemented. In 1940 the city created the Department of City Planning and hired Ralph S. Ellifirt, a landscape architect formerly employed by Hare and Hare (Fox 1985:14). During his time Ellifirt created a freeway network system, the Thoroughfare Plan of 1943, that became the building block of development in Houston. State funds financed Houston's first limited access highway, the Gulf Freeway, and construction was completed by the end of the 1950s. In 1956 the U.S. Interstate Highway Act was passed with the goal to connect major towns and ports for movement of troops and goods during times of war. Houston received $453 million in highway funds, over half of the entire Federal appropriation for Texas (Wolfe 2011:8-70).

Formal plans to construct a "defense loop" around Houston started in the 1940s and resulted in today's Loop 610 which crosses east/west over Lockwood Road in Segment 5. Construction of Interstate Highway (IH) 45 and US Highway (US) 59 in the mid-twentieth century divided established ethnic neighborhoods and demolished many buildings in the third, fourth, and fifth wards (Randall and Korfmacher 2008: Sec E Pg 11.

2.4.2 Greater Fifth Ward

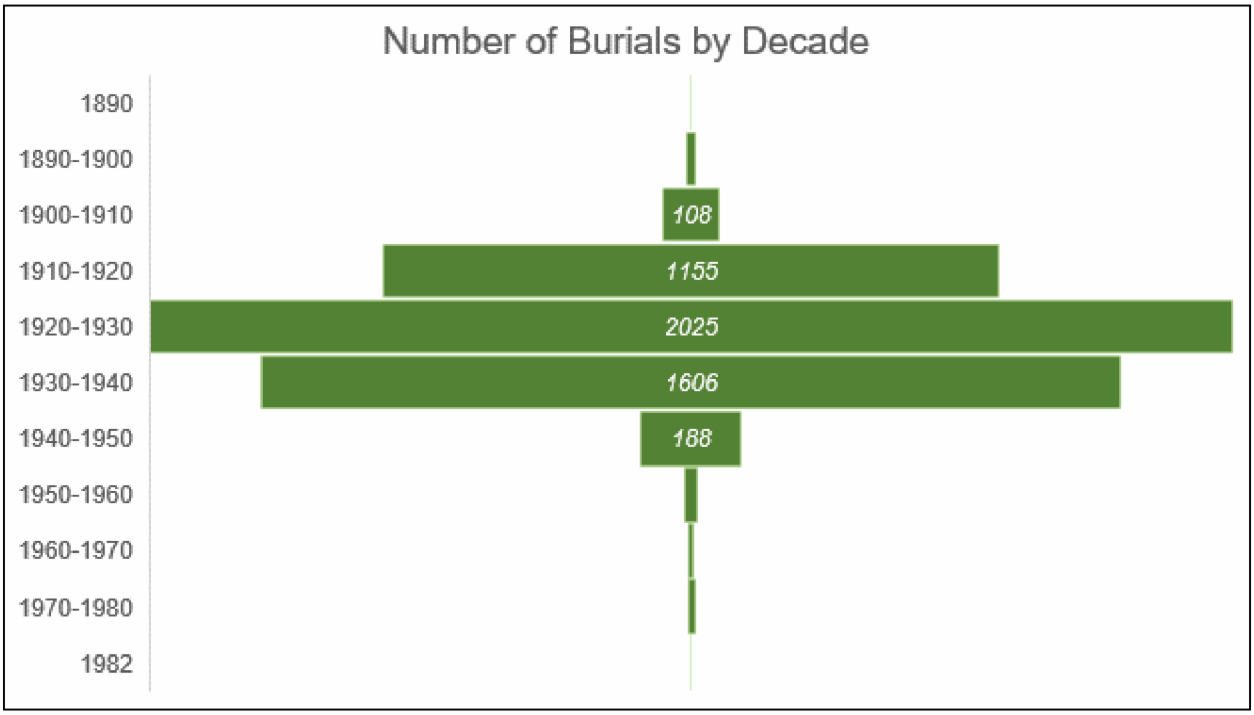
The Greater Fifth Ward was one of Houston's original six wards and was settled in 1866 by former slaves. Prior to the Civil War the area was only sparsely populated. The population of the Fifth Ward around the time of its initial settlement was half African American and half Anglo. By 1870 the population was made up of 578 black inhabitants and 561 white inhabitants (City of Houston 2022). The white inhabitants of the area were largely immigrants, primarily from Ireland, with smaller numbers from Germany and Italy (Mitchell and Pettis 2019). The population of this area has historically been made up of primarily working-class citizens. The oldest institution within the Fifth Ward is Mount Vernon United Methodist Church, which was founded in 1865 by freedman Reverend Toby Gregg. There are five additional churches which are over a century old: Mount Pleasant Baptist, Payne Chapel Methodist, First Shiloh Baptist, Sloan Memorial United Methodist, and Pleasant Grove Baptist. By the 1880s the Fifth Ward's economy was booming due to the support of the railroad industry. A conflagration at a lumber mill in 1891 hindered growth, as did another one in 1912 which burned 119 houses, 116 boxcars, nine oil tanks, and a church and school, crippling various industries within the area (City of Houston 2022).

By the 1920s the Fifth Ward was predominantly made up of African- American residents. In 1925, the commercial center of the city, Lyons Avenue, contained 40 businesses owned by African Americans including a theater, multiple barbershops, and a funeral parlor. Many of the city's African American occupants worked for the Southern Pacific Railroad or in Houston Ship Channel industries. By 1927, the area contained one of the largest African American high schools in the country: Phillis

Wheatley High School, which had 2600 students and 60 teachers. New developments in the 1930s included photography studios, printing plants, and a night club called the Club Matinee, which would eventually host famous musical artists including Ray Charles, James Brown, and Aretha Franklin (City of Houston 2022; Sam 2021). There were also many Italian American owned small businesses in the Fifth Ward throughout the late nineteenth and early twentieth centuries, including a barbershop, a shoe store, and multiple groceries. By the mid-twentieth century most Italian-Americans had left the area (Mitchell and Pettis 2019).

Following World War II, Houston's second African American public housing project was constructed in the area, the Kelly Court Housing Project. A record company called Peacock Records opened in the Fifth Ward around this time, as did C.F. Smith Electric Company, a public park for African Americans, and a Black Community Center called the Julia C. Hester House. The Fifth Ward flourished during the 1950s with Lyons Avenue and Jensen Drive as primary commercial strips. "Over the next three decades the demographics of the neighborhood changed substantially. Specifically, in 1950, 83 percent of the population was white. Just ten years later, in 1960, the neighborhood had a majority Black population, at 71 percent. This history propelled Kashmere Gardens residents to lead the Houston fight to integrate public schools during the civil rights era" (City of Houston 2020:9).

Houston Independent School District (HISD) did not automatically integrate their schools after the 1954 US Supreme Court decision ruled segregated schools unconstitutional (Brown v. Board). It took local lawsuits for the first black student to attend an all-white school, Kashmere Garden Elementary, in 1960 (*Houston Chronicle* 1960). Subsequently, many residents left the area in the 1960s seeking other opportunities. As middle-class families left to integrate into the suburbs and shop at regional malls, the Fifth Ward business district slowly died leaving empty buildings and eventually leading to vacant lots (Pando 2011:37). The area declined economically well into the 1970s and 1980s and became known for a high degree of crime (Kleiner 2020). These struggles were, in part, due to the construction of IH 10 and US 59, as residences and businesses were demolished, families were displaced by construction, and residential areas became disconnected from the business hub of the ward (Mitchell and Pettis 2019).



In the 1990s and 2000s the area grew significantly due to the formation of the Fifth Ward Community Redevelopment Corporation, which sought to reinvigorate the area with the construction of new homes and an increase in job training opportunities as well as access to technology and the arts. By 2008 the population of the area had reached 22,000 (Kleiner 2020).

2.4.3 Evergreen Negro Cemetery

Evergreen Negro Cemetery is located in Houston's Fifth Ward on the east and west side of Lockwood Drive south of IH 10 on Market Street. The cemetery, divided by Lockwood Drive into two sections, contains approximately 5.58 acres and is believed to be the third oldest African American cemetery in Houston. At one time, the site was owned by one of the founders, Fifth Ward resident, businessman, and former enslaved person A. K. Kelley. Kelley established the cemetery with two others: Reverend Edward Lee and W. B. Zinkey. After Kelley's death on November 26, 1928, he was buried in the family plot in Evergreen Negro Cemetery (Beverly 2005; Johnson 2017).

Although some documentation suggests the cemetery was active as early as 1887, the known cemetery burials date from approximately 1890 to 1970. The cemetery was most active from the 1910s through the 1940s (**Figure 2-8**). Those interred in the cemetery include former enslaved people, members of all-Black cavalry regiments (aka Buffalo Soldiers), twenty-four World War I veterans, police officers, and other residents of the Fifth Ward (Johnson 2017). Notable people buried at the cemetery include A. K. Kelley (founder), Dr. E. A. Durham (physician), George H. Lofton (Buffalo Soldier), Deputy Arthur Taylor (deputy sheriff), and Detective Isaac "Ike" Parsons (Houston police detective). Many who were interred at the cemetery did not have grave markers, and death records were used to trace the identity of those buried there (findagrave.com).

Figure 2-8: Number of Burials by Decade at the Evergreen Negro Cemetery

Source: findagrave.com 2023.

By 1944, the City of Houston had extended Lockwood Drive through the middle of the cemetery grounds as a two-lane road. In the late 1950s the city of Houston sought to expand Lockwood Drive from Sonora to Liberty Road. Lockwood Drive was expanded into a boulevard with two travel lanes and a center median. This widened the road considerably and encroached on many burials at the cemetery. In the late 1950s, the City of Houston contacted as many descendants as could be identified to obtain their permission to quitclaim the burial plots in the proposed median and have the remains moved to another cemetery. Removal of those burials was conducted before the road was expanded, and at least 188 bodies were exhumed, according to local news sources (*Houston Chronicle* 1957). However, several unmarked burials associated with "Stranger's Rest" and "Potter's Field" areas of the cemetery could not be identified. Later newspaper accounts indicate that at least 490 burials were removed and relocated to other cemeteries, including Eternity Park, Oak Grove (or Park), and Paradise cemeteries in Houston (Beverly 2005; *Houston Chronicle* 1969, 1979).

By the 1970s dense vegetation had overtaken the entire cemetery. Two decades later, the African American community began to reclaim and preserve the historic graveyard. In 1995, a nonprofit organization called Project RESPECT, along with area universities and students, began work to clean up and restore the cemetery. Fifth Ward community efforts to raise awareness for the cemetery continued into the 2000s (Boney 2016). On July 31, 2009, the THC declared the site a "Historic Texas Cemetery." The cemetery is maintained and operated by Project RESPECT, a nonprofit cemetery corporation.

3 Investigation Methodology

Texas Antiquities Permit No. 30784 was issued in August 2022 for the field investigations, with Mindy Bonine serving as Principal Investigator. Fieldwork was conducted December 5–9 and 14–16, 2022. Mindy Bonine led the first week of fieldwork, with Aaron Norment heading up the second week. Archaeologists Cameron Michael and Andrew Milam assisted the team leaders. Mindy Bonine and Travis Trahan conducted archival research, in addition to the post-field analysis of the artifacts and remains.

3.1 Field Methods

As the archaeological investigation was conducted well in advance of any finalized construction plans, the as-built environment was taken under consideration when planning the fieldwork. The [redacted]

AmaTerra archaeologists arrived on-site and set up the real time kinematic (RTK) global navigation satellite system (GNSS), which was set to 1.4-centimeter (cm) accuracy. The field team then measured 10-foot (3.048 meters) diameter [redacted] These areas were to be avoided by the backhoe. They then conducted a 100 percent pedestrian survey and visual inspection of the survey area. Archaeologists looked for any disturbed areas, surface evidence of graves and/or burial markers. No markers or grave depressions were observed, but a drainage basin, storm drain, and drainpipe were observed near the center of the survey area. Archaeologists mapped these features using the RTK system.

Preliminary background research indicated that the survey area was not likely to be favorable for non-invasive investigations (e.g., remote sensing) due to extensive disturbance from past work along Lockwood Drive. Thus, mechanical excavation was used to evaluate the survey area. A standard rubber-tire backhoe was used for the scraping. It was fitted with a flat-bladed, toothless excavation bucket 4-feet (1.21 meters) wide. The backhoe worked in all areas outside of the tree buffer and the existing roadway, sidewalk, etc.

[redacted] archaeologists employed a 40 to 50 percent sampling method. This strategy included a backhoe trench scrape a few centimeters of soil at a time to expose the intact subsoil, then a move over about 1-1.5 meters (3.28-4.92 feet) to excavate a trench parallel to the first. Trench locations were slightly modified to avoid the obstacles in the survey area. The parallel scrapes continued until the entire area had been sampled. The trenches were oriented roughly north-south so that they would crosscut the direction of any burial shafts, which were oriented east-west. The narrow spacing of the trenches and the orientation would be sufficient to encounter any unmarked burial shafts yet leaving enough intact soil for the backhoe to work safely.

Archaeologists dug the trenches to a depth sufficient to confirm the presence or absence of likely human burials. They watched for soil discolorations and other features consistent with previously excavated burial shafts, including burial-related artifacts, hardware, and human remains. The centerline of all trench scrapes was mapped with the RTK system. The field team documented each trench on a standardized form and through photographs, recording the location and depth of any features within. Open trenches were backfilled at the end of each day.

If at any time, evidence of human burials (e.g., burial shafts, hardware, skeletal remains) were identified in the trench scrape, those locations were investigated by hand to: 1) uncover the cultural material; 2) plot the remains with the RTK system; and 3) record the finds on field forms. They were evaluated for evidence that suggested the remains had been removed ca. 1960 or if the body remained intact and *in situ*.

Locations where only burial container wood, container hardware, and/or small bone fragments remained indicated the body had been moved. These areas were recorded, the material was collected for laboratory analysis and future reinterment, and the field team continued the investigation. In these cases, only bone fragments, non-ferrous metal coffin or casket hardware, and associated burial goods were collected. The burial container wood was left in place, as it remained quite friable and was unable to be removed without its decomposition. Likewise, any marine shell fragments found with the burials were not recovered for the same reason.

Alternatively, for those locations with sufficient human bone to indicate a body that had not been recovered ca. 1960, all work in the immediate vicinity ceased until such time as HNTB, METRO, and the THC could be notified. Work continued away from the find location if the team was confident that the find would not be impacted as a result. Once all were notified and work could proceed, the field team covered the burial location with several sheets of plastic and the trench scrape was refilled.

Periodically, Dr. Woody Jones, Ms. Lisa Jedkins, and Ms. Zanitra Wells from Project RESPECT, the nonprofit cemetery corporation in change of the maintenance and preservation of the Evergreen Negro Cemetery, visited the survey area during the field investigations. Archaeologists on site reviewed the investigation methods with the visitors and presented preliminary results. Discussions were initiated in regard to the final disposition of the remains, which was tentatively identified as an alternate location within the Evergreen Negro Cemetery.

At the conclusion of the field investigations, [redacted] was returned to its original condition as much as possible. The field team returned to the AmaTerra office to secure the collected material in a temperature-controlled and locked facility, with limited personnel access. The bone fragments were placed in paper bags with their associated provenience information and separated from the heavier coffin or casket hardware and burial goods, which were placed in plastic bags after air drying. All recovered items were logged on inventory forms.

3.2 Laboratory Analysis

During the field investigations, only bone fragments, burial container hardware, and burial goods were collected. The material was collected with the intention of a brief analysis and subsequent reburial at the Evergreen Negro Cemetery. The intent was to secure the remains from future disturbances, recognize the presence of those who had been buried in the median, and provide suitable and respectful reinterment in a dedicated burial ground.

Bone fragments were analyzed by a senior archaeologist with experience in bioarchaeology to determine if they could be anatomically identified. As the fragments were very small and less than 0.1 percent of the complete body, attributes such as height, age, sex, racial ancestry, pathology, or cause of death could not be determined. What attributes that could be determined were noted by the analyst and included with the field data.

Burial container hardware was photographed and typed. The type of coffin or casket component was identified for each item, but stylistic attributes were only broadly identified. The collection was compared with hardware that had patents to determine their date of earliest manufacture, as well as with collections from other nineteenth and twentieth century cemeteries such as the New Home Cemetery in Fort Bend County (Hill and Pye 2012), Freedman's Cemetery in Dallas (Davidson 1999, 2004), the Third New Cemetery in Houston (Foster and Nance 2002), the Oscar Abstein Cemetery in Harris County (Broehm et al. 2004), The Phillips Memorial Cemetery in Galveston (Dockall et al. 1996), and the Pioneer Cemetery in Brazoria County (Tiné and Boyd 2003, Norment et al. 2016). Only one trade catalog was easily located for comparative research, and while many other trade catalogs have been found through other cemetery investigations, time constraints prevented an in-depth investigation of these resources. However, the design of the burial container hardware was linked to a date range of manufacture and popularity as closely as possible.

Burial goods were identified, photographed, and, where possible, researched as to date of manufacture. Where feasible, interpretations as to the overall social significance of the burial goods were made.

3.3 Archival and Map Research

The archival research portion of the project was conducted to obtain information on specific topics: establishing a timeline for the construction and improvement of Lockwood Drive, and information concerning the disinterment of human remains in advance of the expansion project. A project archaeologist visited the Family History Research Center at the Clayton Library Campus and the African American History Research Center to check their archives for material related to the Evergreen Negro Cemetery. Local newspapers including the *Houston Informer*, *Houston Forward Times*,

the *Houston Chronicle*, *Houston Metropolitan*, and *Houston Newspages* were consulted as well as a vertical file assembled by the African American History Research Center. Find a Grave (www.findagrave.com) was consulted for a record of people known to be buried in the cemetery. The Texas State Historical Association's Handbook of Texas (https://www.tshaonline.org/handbook) was utilized to garner information regarding the general history of the cemetery and the Fifth Ward. The City of Houston and the *Houston History Magazine* were also consulted regarding the history of the area. A preliminary property records search was conducted using the Harris County Appraisal District online records search (www.hcad.org).

Historical maps were also reviewed to determine the progression of the built environment surrounding the Evergreen Negro Cemetery. Two topics were of particular interest: when Lockwood Drive was first constructed through the cemetery grounds, and when the road was expanded into a boulevard. Historical USGS topographic maps through the USGS Historical Topographic Map Explorer (https://livingatlas.arcgis.com/topoexplorer/index.html), historical city street maps, and City of Houston Planning Commission maps were all reviewed to answer these questions. The historical major thoroughfare and freeway plan maps from 1942-2022 were all available online (https://www.houstontx.gov/planning/transportation/MTFP_HistoricalMap.html). Historical aerial photographs were obtained from USGS Earth Explorer (https://earthexplorer.usgs.gov/).

3.4 Historian Interview

On Wednesday, February 15, 2023, the Principal Investigator conducted an informal interview with Ms. Lisa Jedkins and Ms. Zanitra Wells of Project RESPECT, and Historian Dr. Donald Williams, via Zoom. Dr. Williams was a resident of the Fifth Ward and an active participant in the restoration of the Evergreen Negro Cemetery, as well as a descendent of individuals interred at the cemetery. The interviewees provided much needed knowledge of the history of the cemetery as well as possible avenues for future research. Topics ranged from the location of possible documentation concerning the cemetery and the disinterment of remains ca. 1960, an overview of the appearance of the cemetery in the 1930s and 1940s, and the efforts the City of Houston employed to contact family members concerning the removal of their relatives at that time. Information obtained from this interview has been added to the results of investigations as needed.

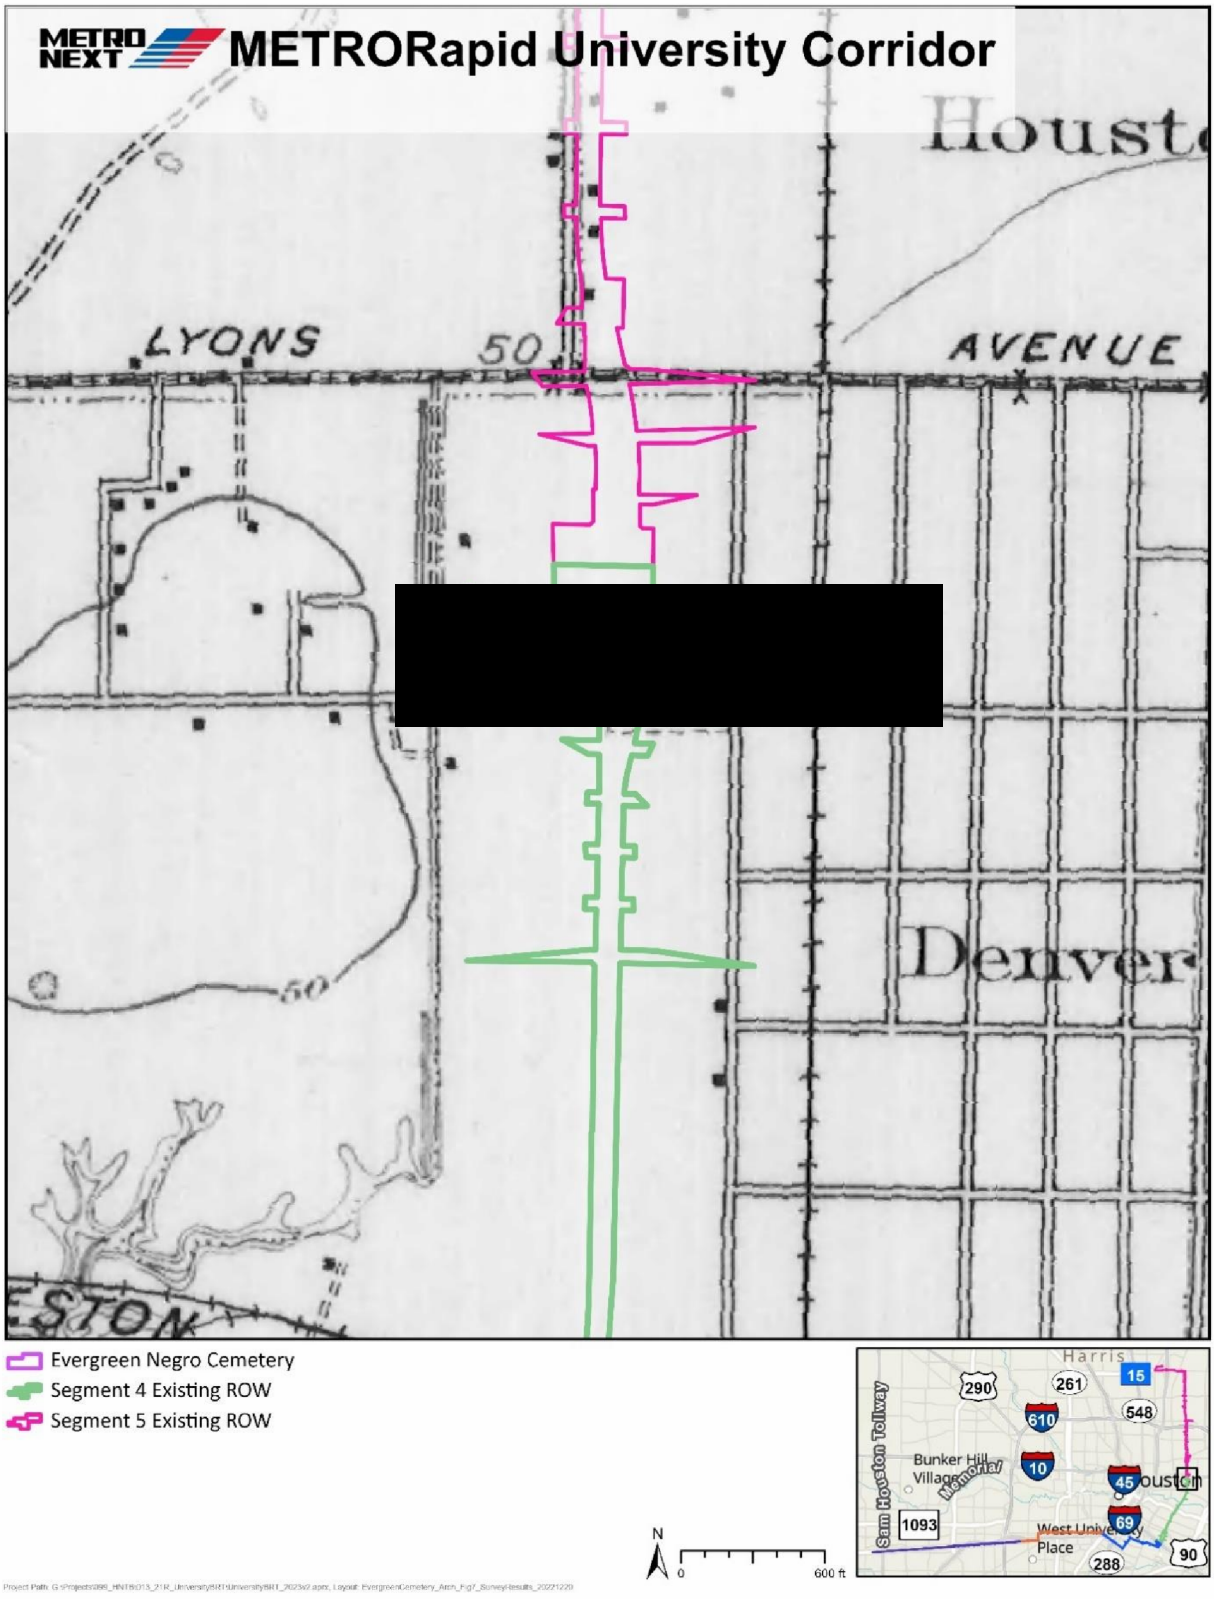
3.5 Curation

No artifacts will be curated. All collected material will be reinterred at the Evergreen Negro Cemetery. AmaTerra will submit all Project-related documents, including photographs, notes, and forms, to the Center for Archaeological Studies in San Marcos (CAS).

4 Results of Investigations

This section documents the results of the archival research and archaeological survey investigations. The historical map review and archival search focused on the installation and subsequent expansion of Lockwood Drive through the Evergreen Negro Cemetery, as well as the removal and reinterment of the human remains ca. 1960. Unfortunately, primary source material concerning the disinterment was not located in this initial search, and only secondary source material was used in the cemetery's narrative history. Several questions remain, including exactly how many bodies were disinterred, the

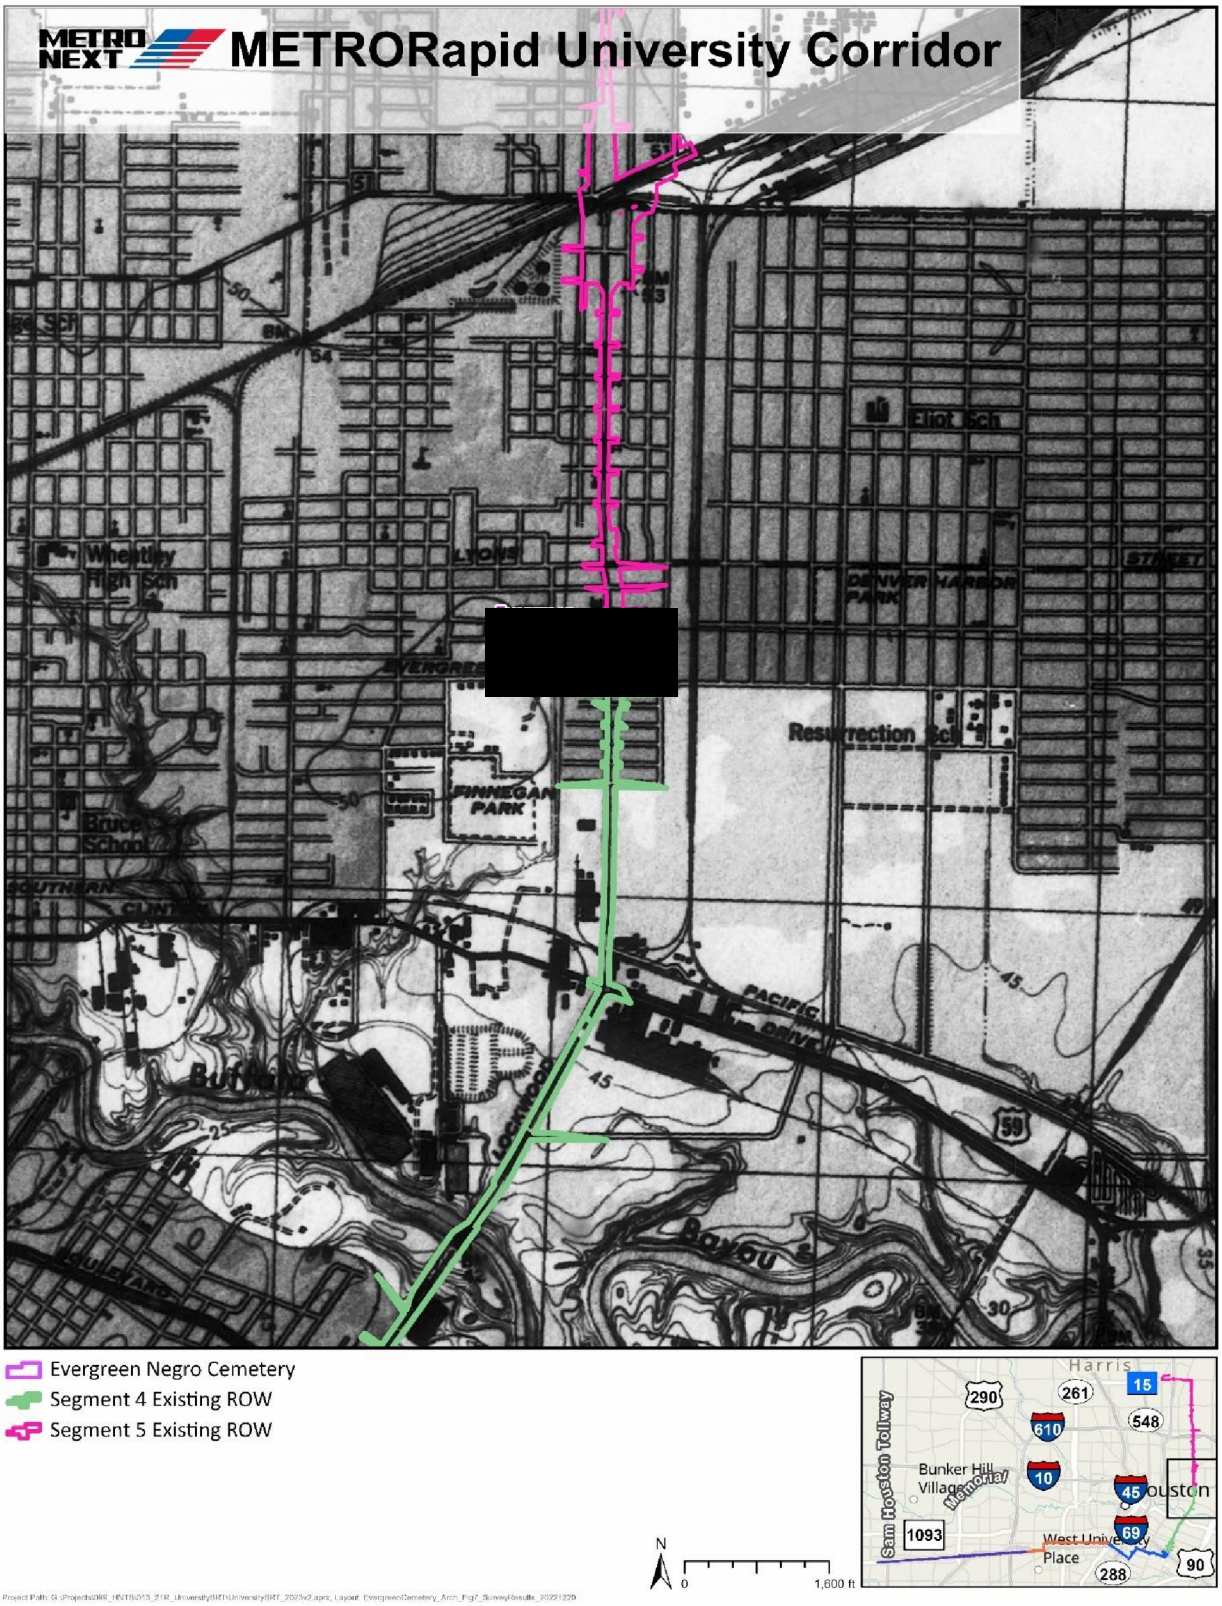
names of those removed, and where they were relocated. More indirect lines of inquiry may provide information that answers these questions about the cemetery's history. The results of the historical map review, aerial photograph review, and preliminary property records search is presented below.



The archaeologists excavated 20 north-south-oriented trench scrapes [redacted] of the median (approximately 4 feet below the surface), one storm drain near the center of the median, and one storm drainpipe connecting the storm drain to the storm sewer system to the west. A sculpted drainage basin was identified and mapped. The investigations identified 33 localities that contain evidence of a burial. These localities included human bone, burial container wood and hardware, or personal items associated with a grave. Of these, three localities contained sufficient skeletal material to be considered "probably intact" burials and one locality that contained a "partial" burial. These four locations were left in place at the conclusion of fieldwork. The entire survey area was given the archaeological site trinomial 41HR1270.

4.1 Historical Map Research

The first set of maps researched to determine the historical built environment were USGS topographic maps, through the USGS Historical Topographic Map Explorer. The earliest topographic map, 1916 (Settegast 1:24,000) did not contain the city streets within the city limits of Houston. The 1922 topographic map (Settegast (1:31,680), depicts the development around the cemetery as well as the cemetery itself. However, the disposition is different than its current configuration. The maps depict Market Street running east-west through the cemetery, which is located west of Sakowitz Street. Both streets are depicted as paved, but Dr. Williams indicated that they were one-lane unpaved roads at that time (**Figure 4-1**). This may be the area where the earliest graves are located. Structures are present along the unpaved road that would become Carroll Oliver Way and the western half of the cemetery in later years. The rest of the land surrounding the cemetery was vacant.

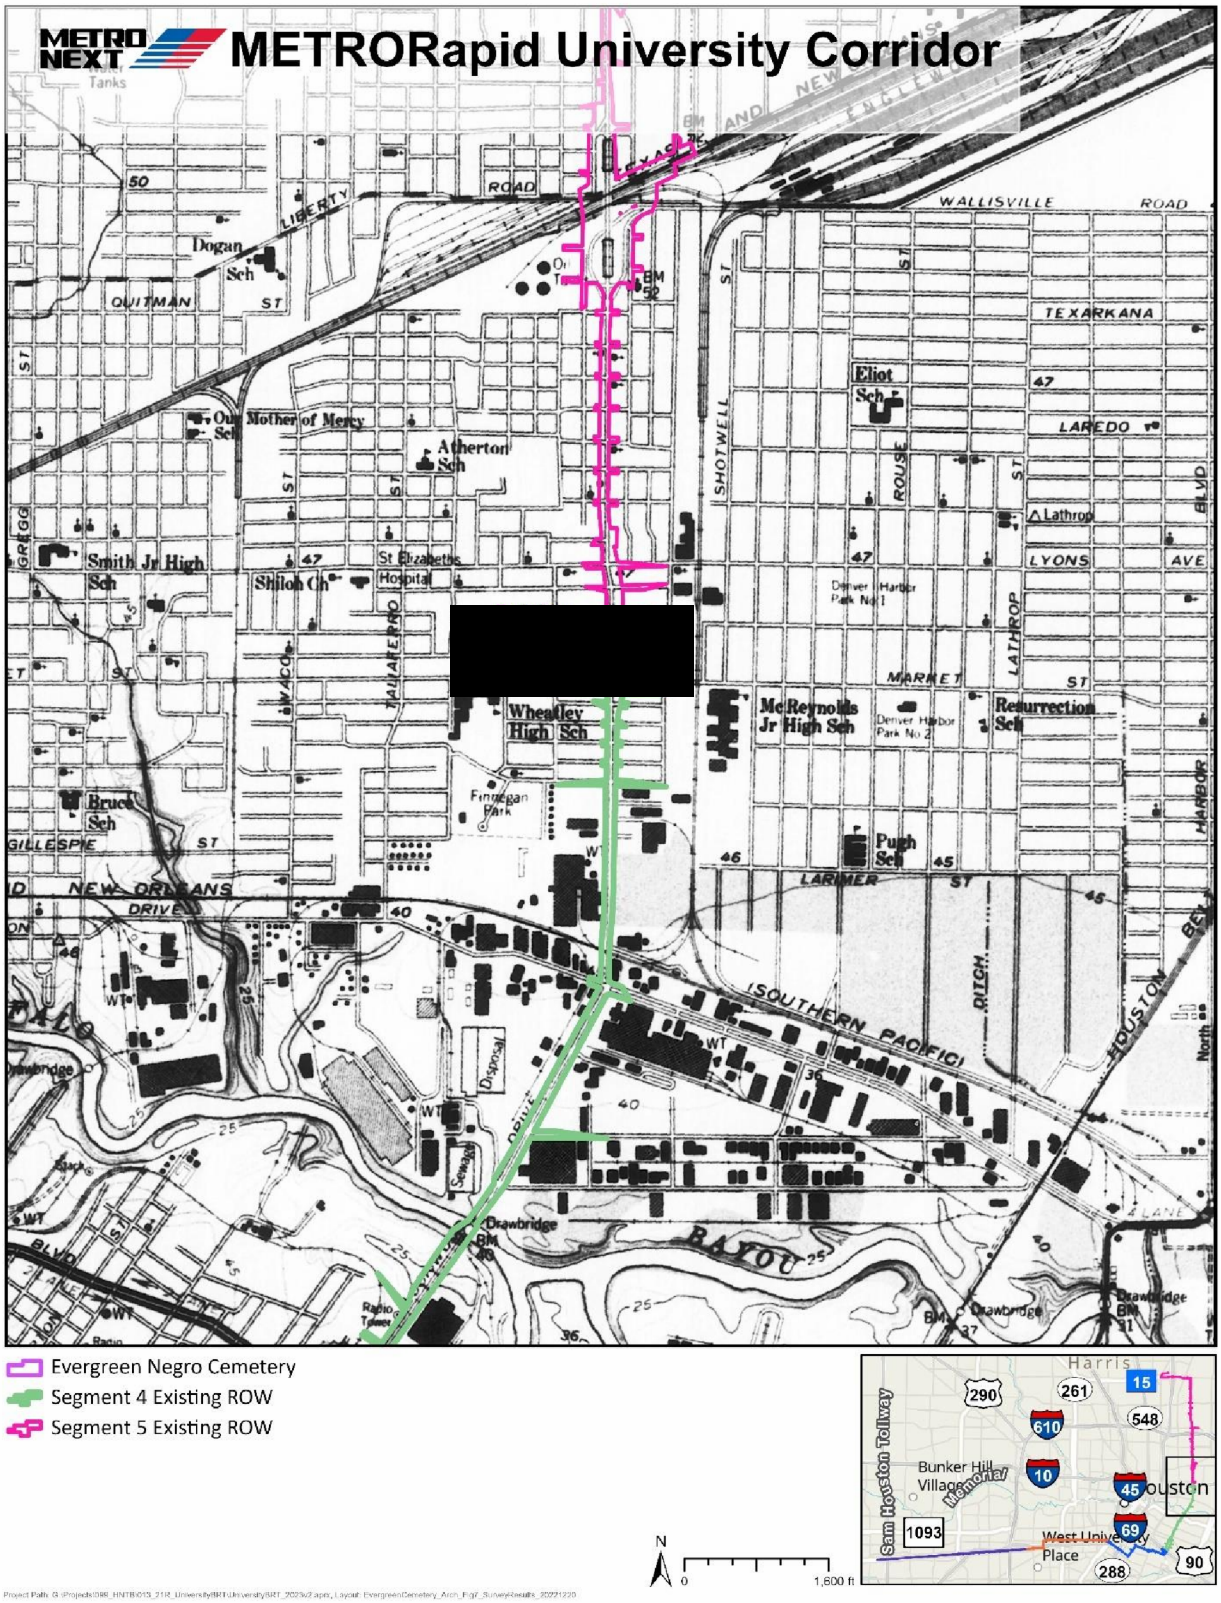


A 24-year gap separated an update to the Settegast (1:31,680) topographic map (dated 1946), during which time several changes were recorded (**Figure 4-2**). Market Street exhibited a slight dip to the south at the location of the cemetery, which was marked entirely on the north side of the road, and the cemetery itself was depicted as extending all the way from Carroll Oliver Way to Sakowitz St. It appears that Market Street had been moved approximately 100 feet to the south to border the southern edge of the cemetery. This in turn jointed the two halves into one block. Lockwood Drive, only one roadway at the time, split the cemetery into two halves. Thus, the road was developed sometime between the 1920s and the 1940s. Neighborhood blocks had been formalized by this point, with only a few areas of still undeveloped land depicted.

Figure 4-1: 1922 Settegast USGS Topographic Map (1:31,680)

Source: USGS 2023.

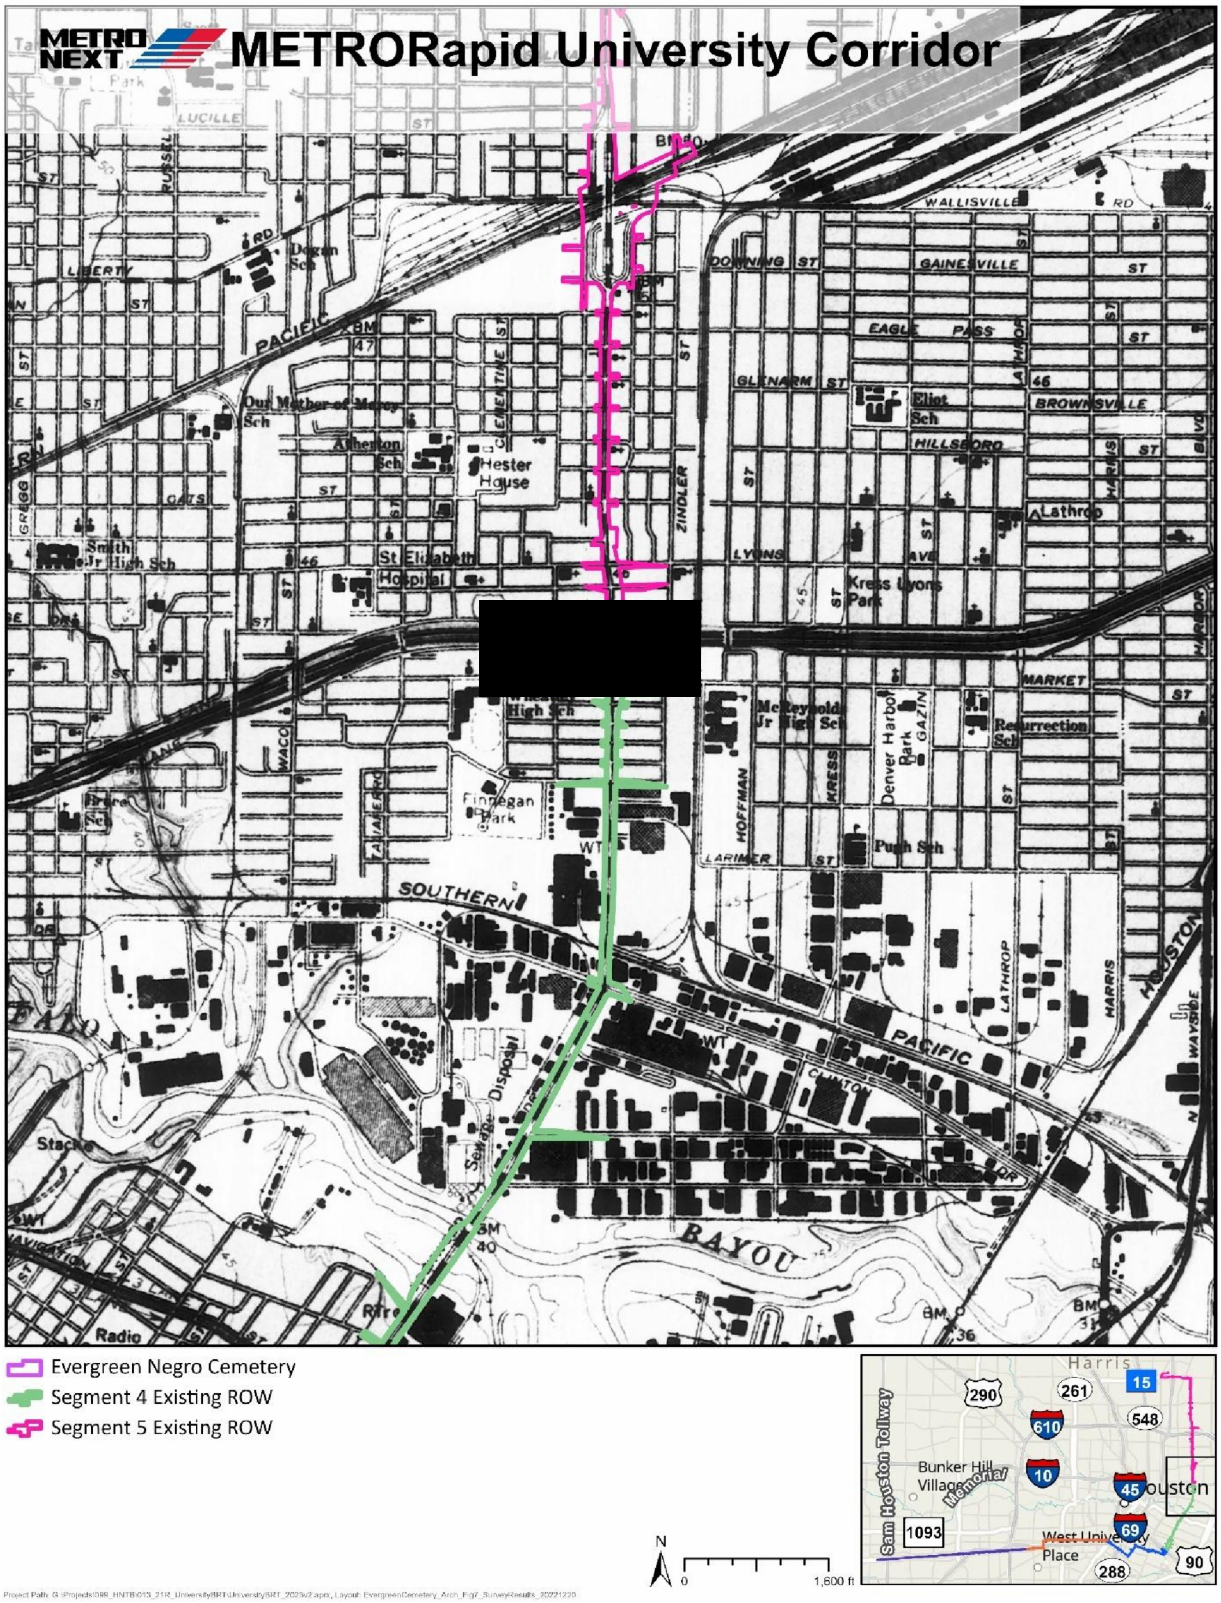
Figure 4-2: 1946 Settegast USGS Topographic Map (1:31,680)



Source: USGS 2023.

The area remained largely unchanged in the 1955 update to the Settegast topographic map, which had been updated to 1:24,000 scale (**Figure 4-3**). The undeveloped land to the southwest had been developed into the Wheatley High School, and all the street locations remained the same. However, the 1966 Settegast USGS topographic map (11 years later), depicted several significant changes. IH 10 had been completed to the north of the cemetery location, and the beginnings of a divided Lockwood Drive appeared at the intersection with IH 10, most likely a result of the interstate's construction (**Figure 4-4**). The division did not extend through the cemetery itself though, according to the map. Two buildings were marked on the north side of the cemetery grounds. Fifteen years later, the 1982 Settegast USGS topographic map had reduced the footprint of the east half of the cemetery to its current size, while leaving the west half a little larger on the north side (**Figure 4-5**). The divided road through the cemetery is shown for the first time on the USGS maps. If accurate, then the division of Lockwood Drive as a boulevard through the Evergreen Negro Cemetery was constructed between 1966 and 1982. The 1995 Settegast USGS topographic map depicted the same orientation as the 1982 map for the area around the cemetery. It has remained largely unchanged through 2020 apart from a few changes in building footprints to the north.

With this rough timeline in place, additional maps of Houston streets were viewed to supplement or refine the timeline of road development around the cemetery. Two 1928 maps of the area, drafted by real estate developers or land appraisers in the area, depict slightly different street configurations around Market Street at the cemetery location (**Figure 4-6**). The neighborhood to the east of the cemetery, edged by Sakowitz Street, are present on both maps. In addition, Market Street is depicted in the same configuration, and two lots surrounded by streets are also depicted just north of the cemetery. The major difference between the maps is a new neighborhood on the south side of Market Street, consisting of 10 blocks in a 2 x 5 grid surrounded by streets. The center street in this new set of blocks appears to be Lockwood Drive, albeit unnamed on the map. This set of streets is still present as a Houston neighborhood just south of the cemetery.



A 1939 map of the city streets of Houston depicts Lockwood Drive extending through Market Street and connecting with a Cushing Street north of Lyons Street (**Figure 4-7**). This is the first map depicting the full path of Lockwood Drive through the Evergreen Negro Cemetery. Thus, it appears that Lockwood Drive bisected the cemetery between 1929 and 1939. Of note, this is within the period when burials at the cemetery were most active.

To further refine the timeline for the expansion of Lockwood Drive into a boulevard, the Major Street Plan Maps developed by the City of Houston Planning Commission were consulted. The 1942 map of Houston depicted the intersection of Lockwood Drive and Market Street as requiring improvements along Lockwood Drive as part of city-wide improvements to city streets (**Figure 4-8**). In 1955, while the proposed route for U.S. Freeway 90 (which would become IH 10) was under development, Lockwood Drive was slated for widening from Clinton Drive to Collingsworth Road, through the Evergreen Negro Cemetery (**Figure 4-9**). The 1957 map depicted the same section of Lockwood Drive as "To Be Acquired," indicating that the widening of the road would require additional ROW (**Figure 4-10**). The 1959 map, however, depicts Lockwood Drive at Market Street as having adequate width. As this map was finalized in 1959, it would indicate that either the construction of the boulevard had moved beyond the planning stage and had either been completed or was underway (**Figure 4-11**). By 1960, IH 10 along this section of the city was listed as either underway or completed, as it had been hand-lined as having "adequate width" (**Figure 4-12**). The subsequent maps indicated no changes to the area.

Figure 4-12: 1960 Plan for Major Thoroughfares and Freeways Map

Source: City of Houston Planning and Development Department 1960.

These plan maps tell a slightly different story than the USGS topographic maps. The topographic maps indicate two stages of development for Lockwood Drive, one ca. 1955-1966 and the other ca. 1966-1982. The plan maps indicate one construction project ca. 1960. Although both are "official" maps drafted by government agencies, the City of Houston plan maps are more likely to be accurate, both in terms of local knowledge of the infrastructure development and the overall expense of two construction projects in the same area within a few years of one another. Thus, this report will presume that ca. 1960 is an accurate date for the expansion of Lockwood Drive.

4.2 Aerial Photograph Research

Researchers found four aerial photographs of the survey area dating between 1943 and 1969 (**Figures 4-13–4-16**). The 1943 aerial photograph depicts both the current path of Market Street as well as the two-land Lockwood Drive (see Figure 4-13). This matches the results of the historical map research. Close examination of this photograph reveals the trace of Market Street that formerly bisected the cemetery into a north section and south section. These two halves had been joined with the realignment of Market Street. Several ground level monuments are visible on the photograph, including two or three areas in what would become the median of Lockwood Drive. A sidewalk or footpath is visible between the cemetery boundary and the ROW of Market Street.

The 1953 aerial photograph (see Figure 4-14) depicts a similar cemetery landscape, with the same complement of trees and roads. The old trace and sidewalk appear to be overgrown. New residences had been built on the lots bordering the northeast side of the cemetery, but the area remains largely unchanged. By 1962 (see Figure 4-15), the cemetery grounds had been untended sufficiently long for dense vegetation to cover the property, although the footpath on the south side remained open. The most notable attribute is the cleared section just east of Lockwood Drive, matching the proposed ROW for the road expansion. It appears that the disinterment had been completed and all the trees removed in anticipation of road construction. Interestingly, evidence of land clearing for IH 10 is not visible on this photograph. The 1969 photograph (see Figure 4-16) was taken at a much lower resolution, but the vegetation covering the cemetery and the construction of Lockwood Drive and IH 10 are visible. Combined, the aerial photographs and the historical map research indicate that the burial disinterment and expansion of Lockwood Drive took place a few years on either side of 1960.

4.3 Property Records Search

A search of the Harris County property records returned a plat map of the "Extension to Evergreen Cemetery" dated May 5, 1930. This map detailed an extension to the cemetery that had been the location of east-west Market Street that bisected the cemetery at its founding. The plat shows Market Street's realignment along the southern border of the cemetery grounds, and the old road had been laid out into 96 lots 15-x-20-feet in size with a 10-foot driveway through the center and 5-foot walkways separating every two lots. Of note, an 80-foot section had been removed from the layout with the notation "Reserved by City of Houston for Lockwood Extension." The property was owned by W. B. Zinky (one of the cemetery founders) who had the property conveyed to him by the City of Houston in December 1929 (see Figure 4-17). It is unclear if this new arrangement of lots matched what already existed at the cemetery. The date of the map correlates with the earliest possible date of the construction of Lockwood Drive through the cemetery, based on the map research.

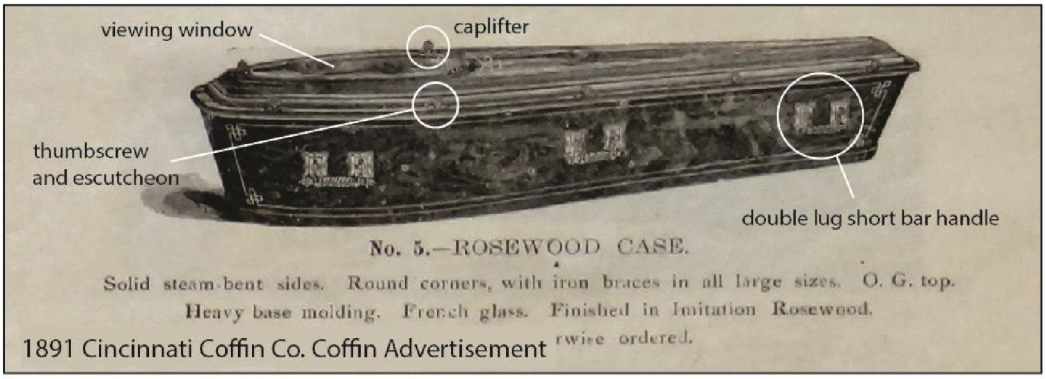
4.4 Mortuary Terminology Overview

The following is a brief primer on the history and nomenclature surrounding burial containers intended to give the reader an overview of mortuary terminology and stylistic context, as some specific terms have specific meanings. The late nineteenth century and early twentieth century saw a transition from coffins to caskets (Davidson 1999; Hill and Pye 2012; Hacker-Norton and Trinkley 1984). Coffins had been the ubiquitous burial container throughout the eighteenth and nineteenth centuries, but a change in consumer behavior with the trend towards the "beautification of death" slowly altered the perception of the coffin as an acceptable burial container. The casket design, more closely imitating a couch with interior padding, roomier interior, and more decorative elements, was first patented in 1859 (Davidson 1999:152). However, this design change took some time to catch on, and coffins were still in use by the early 1900s.

Late nineteenth century coffins typically were made from wood, with either straight or tapered sides, four to six matching handles, and thumbscrews to hold down the lid. Some coffins had a viewing window for the upper part of the body, which had its own wooden lid. More expensive coffins were constructed of finer wood species like walnut or mahogany, while less expensive cases were constructed of pine, oak, or other local wood species. The flat bodied thumbscrew, used to attach coffin lids, was first patented in 1874 and became the industry standard closure (Davidson 1999:190).

Some early caskets mimicked the coffin design with thumbscrew closures, viewing windows, and clipped corners, but by the 1910s casket designs formalized into a rectangular box with a hinged lid and latch closure and more ornate decorative elements (**Figure 4-18**). The long bar handle, with either single or double lugs, appears at this time, although short bars continued to be used (**Figure 4-19**). Caskets continued to be made of wood, but metal caskets also became a popular, if expensive, option, dominating the industry by the 1950s (Hill and Pye 2012:97).

Coffins and caskets have a unique nomenclature associated with their construction and decorative elements, and these terms will be used in the location descriptions. As such, a quick explanation of terms is provided below:



- Coffin: six-sided burial container with the widest point at the shoulders and tapers toward the head and feet.
- Casket: rectangular burial container with a hinged lid; some early caskets had clipped corners.
- Handle: hardware used for lifting and carrying the coffin or casket; in five forms:
    - Single lug swing bail: one mounting plate (called a lug) and U-shaped or oval grip (1850s+ for children).
    - Double lug swing bail: two mounting plates and U-shaped grip (ca. 1700s to 1910s).
    - Single lug short bar: (1890s+).
    - Double lug short bar: (1900s+).
    - Long bar (either single or double lug) with the bar extending the full length of the casket (1910s+).
- Caplifter: a knob-type handle for lifting the coffin lid (ca. 1870s to 1920s).

- Thumbscrew: screw closures to attach the coffin lid to the body, often decorative (1870s to 1920s).
- Escutcheon: a decorative plate attached to the coffin or casket with a center hole for a tack, thumbscrew, or other hardware (ca. 1850s to after 1920).
- Ornamental Tack: tack attached to the edge of a coffin lid, often decorative (1850s to 1910s).
- Name Plate: decorative plate with engraved message or design.
- Ornament: decorative addition to the coffin or casket with no additional operation.
- Viewing Window: clear glass pane for viewing the body during funeral, covered by the coffin/casket lid.
- Casket Hinge: hinge used to swing up the lid of the casket.
- Lid Support Bar: folding support bar to lock casket lid open.
- Latch: locking mechanism for the casket lid.
- Nails, Screws, Tacks: fasteners used to attach the wooden structure of the coffin or casket as well as the fabric lining.

4.5 Results of Archaeological Investigations

The location of the trench scrapes, burial locations, and obstacles are presented in **Figure 4-20**. The archaeological site boundary of 41HR1270 is included on this map. Of note, the yellow trench scrape lines indicate the centerline of the trenches, which measured 4 feet wide (1.2 meters). The red burial locations are removed burials, the blue locations indicate likely intact burials, and the purple burial location was found to be only partially intact. The green circles on the map are the 10-foot diameter buffers around the tree trunks. Descriptions of all 33 burial locations are presented below.

4.5.1 Burial Location 1 (Removed Burial ca. 1960)

Provenience Information: Burial Location 1 was found in Backhoe Trench 3 at 95 centimeters below surface (cmbs; 37.4 inches), in the northeast quadrant of survey area [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, gray granite marker fragments, and human bone fragments in a 0.25 square meter area (0.47 by 0.65 meters). Four gray granite marker fragments, none of which contained inscriptions, were found in the trench wall. Two small fragments were observed in the west wall about 40 cm (15.7 inches) apart and 65 cmbs (25.6 inches), and the two others were found in the east wall stacked together at a 45-degree angle beginning at about 55 cmbs (21.7 inches). The marker appeared to be approximately 3.5 inches thick. Below the marker, fragments of dark-colored wood and bone were recovered. None appeared to be intact. The soil around the artifacts appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Fifty-eight fragments were recovered. At least seven of these fragments appear to be cranial fragments, with one exhibiting part of an eye orbit. One tooth (a molar) was also recovered.

Associated Hardware: One white metal caplifter or decorative knob was recovered (**Figure 4-22**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1870s to the 1920s based on the caplifter.

Figure 4-21: Burial Location 1

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-22: Caplifter from Burial Location 1

Source: AmaTerra Environmental, Inc. 2023.

4.5.2 Burial Location 2 (Removed Burial ca. 1960)

Provenience Information: Burial Location 2 was found in Backhoe Trench 3 at 60-84 cmbs (23.6-33.1 inches), in the northeast quadrant of the survey area [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and casket hardware. Fragments of a dark-colored wooden casket bottom was observed in a 0.36 square meter area (0.93 by 0.72 meters). One clear edge, likely the eastern end of the casket, could be seen. Several tree roots appeared to have grown parallel to the casket edge. The wood was highly friable, and disappeared to the north, west, and east. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: Four white metal short bar tips from either a single lug or double lug handle were recovered. Three tips matched, while the fourth had a different design. Several had embedded wood dowels. The fourth example (the single different style) is the same design as the tip found at Location 9 (**Figure 4-24**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-23: Burial Location 2

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-24: Handle bar tips from Burial Location 2

Source: AmaTerra Environmental, Inc. 2023.

4.5.3 Burial Location 3 (Removed Burial ca. 1960)

Provenience Information: Burial Location 3 was found in Backhoe Trench 3 at 80-86 cmbs (31.5-33.9 inches), in the northeast quadrant of the survey area, [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and casket hardware. Dark-colored wood fragments were found in a 0.14 square meter area (0.49 by 0.33 meters) along with brick fragments and hardware. No casket shape was discernable, and the area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: A total of nine burial container artifacts were observed and collected. One white metal lug in a decorated shield pattern with one attached white metal lug arm was recovered. The lug arm socket was square in shape for a square bar. Another other white metal lug arm in the same design was found nearby. In addition, two white metal bar tips of two different styles were recovered in the same area. One ferrous sheet metal fragment with fused nails, one semi- circular ferrous fragment, one white metal fragment, one ferrous finishing nail (possibly machine cut), and one ferrous clip or closure fragment were also recovered (**Figure 4-26**).

Associated Burial Goods: One tan and brown swirl marble was found with the casket hardware.

Proposed Burial Date: The burial dates from about 1900 to the 1950s based on the ornamentation type and the end of the burial period in this section of the cemetery.

Figure 4-25: Burial Location 3

Source: AmaTerra Environmental, Inc. 2023.

4.5.4 Burial Location 4 (Removed Burial ca. 1960)

Provenience Information: Burial Location 4 was found in Backhoe Trench 3 at 80 cmbs (31.5 inches), in the northeast quadrant of the survey area, [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and coffin or casket hardware. Dark-colored wood fragments were found in a 0.41 square meter area (0.78 by 0.60 meters) along with burial container hardware. No shape was discernable. The wood fragments were mixed with the surrounding soil in a roughly oval stain approximately 50 x 90 cm (19.7 x 35.4 inches) in size. The area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay.

Skeletal Remains: Nineteen skeletal fragments were recovered from Burial Location 4.

Associated Hardware: One white metal handle tip from a short bar style handle was recovered along with a wooden dowel. In addition, two ferrous finishing nail fragments (possibly machine cut), and one ferrous metal fragment were recovered. The ferrous artifact appears to be a latch or clasp fragment (**Figure 4-28**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from about 1890 to the 1950s based on the nail fragments and the end of the burial period in this section of the cemetery.

Figure 4-27: Burial Location 4

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-28: Hardware from Burial Location 4

Source: AmaTerra Environmental, Inc. 2023.

4.5.5 Burial Location 5 (Removed Burial ca. 1960)

Provenience Information: Burial Location 5 was found in Backhoe Trench 4 at 68 cmbs (26.8 inches), in the survey area's northeast quadrant, of the survey [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container. Fragments of a dark-colored wooden casket bottom was observed in a 0.47 square meter area (0.76 by 0.65 meters). One clear edge, likely the eastern end of the casket, could be seen. The wood was highly friable, and disappeared to the north, west, and east. The soil around the remnant appeared as mottled pale brown (10YR 6/3) and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: One fragment of a porcelain figurine, part of a dress or robe, was recovered. They figurine could not be identified (**Figure 4-30**).

Proposed Burial Date: The burial dates anytime from the late nineteenth century though the mid twentieth century, based on the of burial period of the cemetery.

Figure 4-29: Burial Location 5

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-30: Porcelain Figurine Fragment from Burial Location 5

Source: AmaTerra Environmental, Inc. 2023.

4.5.6 Burial Location 6 (Removed Burial ca. 1960)

Provenience Information: Burial Location 6 was found in Backhoe Trench 4 at 98 cmbs (38.6 inches), in the northeast quadrant of the survey [redacted] A sheet steel grave marker stake was found at 40-50 cmbs (15.7-19.7 inches), above the casket (**Figure 4-31**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and skeletal remains. The western half of a dark-colored wooden rectangular casket bottom was observed in a 0.43 square meter area (0.83 by 0.66 meters). Three clear edges, the western edge, northern edge, and southern edge, could be seen in the trench floor. The wooden bottom turned into tiny fragments and dust when touched with a trowel, and only a trace of the burial container remained after exposure. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: A total of 28 bone fragments were recovered from the soil above the casket bottom. Two fragments appear to be long bone.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: One silverplate long handled teaspoon was recovered. The handle tip appeared teardrop shaped with no decoration (**Figure 4-32**).

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the shape of the burial container and the end of the burial period in this section of the cemetery.

Figure 4-31: Burial Location 6

Source: v AmaTerra Environmental, Inc. 2023.

Figure 4-32: Silverplate Spoon from Burial Location 6

Source: AmaTerra Environmental, Inc. 2023.

4.5.7 Burial Location 7 (Burial Marker Dump)

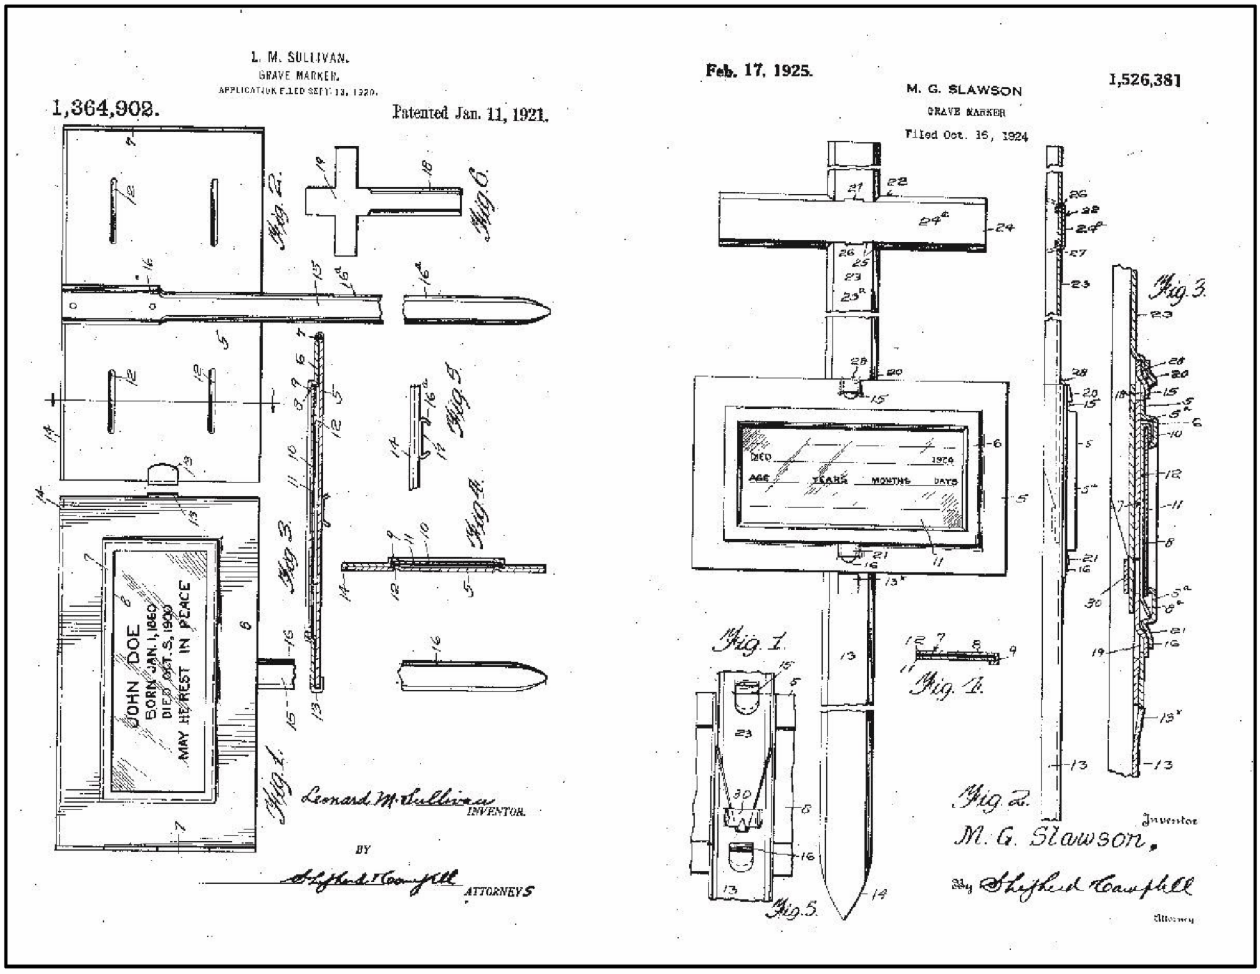
Provenience Information: Burial Location 7 was found in Backhoe Trench 5 at 70 cmbs (27.6 inches), in the northeast quadrant of the survey [redacted] Three sheet steel grave marker stakes were found at 55-65 cmbs (21.7-25.6 inches).

Mortuary Characteristics: This burial location contained no wooden burial container. Only the ferrous grave marker stakes and skeletal remains were observed in a 0.62 square meter area (0.92 by 0.90 meters; **Figure 4-33**). As there were three recovered markers in a small area, it appears this location may be a small dump for near-surface features during the ca. 1960 exhumation. The bone fragments are also scattered and likely not directly associated with an intact burial place. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: A total of eight bone fragments were recovered from the soil in the same vicinity as the grave markers.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.



Proposed Burial Date: The burials associated with the grave markers date from the 1920s to the 1950s. Patents for grave markers with a similar type of stake (with beveled edges) were issued as early as 1921 (Patent 1,364,902; issued January 11, 1921, and Patent 1,526,381; issued February 17, 1925; **Figure 4-34**).

Figure 4-33: Grave Marker Stakes from Burial Location 7

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-34: Patents for Metal Grave Marker Stakes

Source: United States Patent and Trademark Office 2023.

4.5.8 Burial Location 8 (Removed Burial ca. 1960)

Provenience Information: Burial Location 8 was found in Backhoe Trench 6 at 86 cmbs (33.9 inches), in the survey area's northeast quadrant, [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container. The western half of a dark-colored wooden rectangular casket bottom was observed in a 0.71 square meter area (0.98 by 0.90 meters). Three clear edges, the western edge, northern edge, and southern edge, could be seen in the trench floor. The wooden bottom was comprised of fragments of wood in a vertical alignment, but the feature was heavily decayed. Only a trace of the burial container remained after exposure. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the shape of the burial container and the end of the burial period in this section of the cemetery.

Figure 4-35: Burial Location 8

Source: AmaTerra Environmental, Inc. 2023.

4.5.9 Burial Location 9 (Removed Burial ca. 1960)

Provenience Information: Burial Location 9 was found in Backhoe Trench 6 at 86 cmbs (33.9 inches), in the northeast quadrant of the survey [redacted]

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and hardware. Fragments of a dark-colored wooden casket bottom was observed in a 0.52 square meter area (1.49 by 0.44 meters). One clear edge, likely the western end of the casket, could be seen. The wood was highly friable, and disappeared to the north, west, and east. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: One white metal bar tip for a short bar style handle was recovered. Only the distal end was recovered, the proximal end was broken. This example is the same design as the tip found at Location 2 (**Figure 4-37**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-36: Burial Location 9

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-37: Handle Bar Tip from Burial Location 9

Source: AmaTerra Environmental, Inc. 2023.

4.5.10 Burial Location 10 (Disarticulated Remains)

Provenience Information: Burial Location 10 was found in Backhoe Trench 7 at 23-25 cmbs (9.1-9.8 inches), in the southeast quadrant of the survey [redacted] Within the same area, heavy disturbances were observed to 100 cmbs (39.4 inches), with bricks, bottle glass, a horseshoe, amethyst tinted pressed glass, milk glass fragments, and a sheet steel grave marker stake found in the soil matrix.

Mortuary Characteristics: This burial location contained no wooden burial container or casket hardware. Only skeletal remains were observed in a 0.88 square meter area (XX by XX meters). The depth at which these remains were recovered, as well as their attributes, indicate this is not an intact burial. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Six bone fragments were recovered, at least three of which are long bones split down the center.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

4.5.11 Burial Location 11 (Removed Burial ca. 1960)

Provenience Information: Burial Location 11 was found in Backhoe Trench 8 at 90-100 cmbs (35.4-39.4 inches), in the southeast quadrant of the survey area (**Figure 4-38**).

Mortuary Characteristics: This burial location contained the remains of a wooden burial container observed in a 0.53 square meter area (1.07 by 0.70 meters). The side wall of the western edge of the burial container was found in the trench floor, and hand excavation revealed the bottom of the burial container. The side walls were not found, and the container shape was not discernable. The container wood appeared to be cedar, approximately ½-inch thick, and at least 25 cm (9.8 inches) of the container wall was intact. Both light tan and dark brown wood was visible in the side wall, and at least 70 cm (27.5 inches) of the wall remained intact. The container floor appeared as both light and dark wood as well, and the same thickness as the walls. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

Figure 4-38: Burial Location 11

Source: AmaTerra Environmental, Inc. 2023.

4.5.12 Burial Location 12 (Removed Burial ca. 1960)

Provenience Information: Burial Location 12 was found in Backhoe Trench 8 at 110-132 cmbs (43.3-52.0 inches), in the southeast quadrant of the survey area (**Figure 4-39**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and casket hardware. Fragments of a dark-colored wooden casket bottom was observed in a 0.83 square meter area (1.01 by 0.79 meters). The center portion of the burial container was visible, and the edges were not discernable. The wood was highly friable, and disappeared to the north, east, and south. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: One white metal short bar tip from either a single lug or double lug handle was recovered. The shaft appeared square. A ferrous wire fragment, possibly a nail, was observed nearby (**Figure 4-40**). The handle fragments appear very similar to a style from the New Home Cemetery: Handle Type 14—a full extension handle with three lugs, each with two lug arms (Hill and Pye 2012:175-177). Called the Square Reeded Bar, this style of handle has a possible origin in the 1890s (**Figure 4-41**).

Associated Burial Goods: A marine shell fragment was collected within the burial area.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-39: Burial Location 12

Note: This type of hardware is a full extension handle with three lugs, each with two lug arms.

Source: Hill and Pye 2012:175-177.

4.5.13 Burial Location 13 (Removed Burial ca. 1960)

Provenience Information: Burial Location 13 was found in Backhoe Trench 8 at 127 cmbs (50 inches), in the southeast quadrant of the survey area (**Figure 4-42**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and casket hardware in a 0.86 square meter area (1.04 by 0.82 meters). Fragments of a dark-colored wooden casket side panel was observed crossing the trench, with what appears to be four *in situ* short bar tips. The casket wood was highly friable, mixing in with the surrounding soil. The short bar tips were found lying on top and adjacent to the wooden fragments. One plank of the casket bottom was found to the south, indicating the side panel was the northern section of the burial container. The two tips were separated by about 25 cm (9.8 inches). The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: Four white metal bar tips for a short bar style handle were recovered. All matched in design, and each contained a fragment of wood dowel (**Figure 4-43**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-42: Burial Location 13 with in situ Short Bar Handle Tips

Source: AmaTerra Environmental, Inc. 2023.

4.5.14 Burial Location 14 (Possible Burial Shaft)

Provenience Information: Burial Location 14 was found in Backhoe Trench 8 at 130-168 cmbs (51.2-66.1 inches), in the southeast quadrant of the survey area (**Figure 4-44**).

Mortuary Characteristics: This burial location appeared as one of the few circumstances where a possible burial shaft was observed in the survey area. Located directly adjacent to Burial Location 13, an outline of dark gray (7.5YR 4/1) clay surrounding the more mottled pale brown (10YR 6/3) in a rectangular shape was observed in a 1.79 square meter area (1.63 by 1.10 meters). As this outline appeared at the same depth as the casket bottom of Burial Location 13, it was presumed that either the burial container was located lower in the ground, or it was removed and only an imprint remained. A shovel test was dug in the center of the possible burial shaft. The dark gray clay continued to a depth of 168 cmbs (66.1 inches), with no evidence of a burial container, skeletal remains, or hardware observed. The soil around the outline appeared as mottled pale brown (10YR 6/3) and strong brown (7.5YR 5/6) clay.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

Figure 4-44: Burial Location 14 with Shovel Test

Source: AmaTerra Environmental, Inc. 2023.

4.5.15 Burial Location 15 (Removed Burial ca. 1960)

Provenience Information: Burial Location 15 was found in Backhoe Trench 10 at 118-122 cmbs (46.5-48.0 inches), in the southeast quadrant of the survey area (**Figure 4-45**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container. The western half of a dark-colored wooden rectangular casket bottom was observed in a 0.56 square meter area (1.03 by 0.63 meters). The northwestern corner and parts of the southern edge could be seen in the trench floor. The wooden bottom was comprised of fragments of wood in a vertical alignment but was found heavily decayed. Only a trace of the burial container remained after exposure. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Eleven skeletal fragments were recovered, at least five of which are cranial fragments.

Associated Hardware: Four ferrous sheet metal fragments were recovered, all of which appear to be either parts of a latch mechanism or a lid support bar (**Figure 4-46**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the shape of the burial container and the end of the burial period in this section of the cemetery.

Figure 4-45: Burial Location 15

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-46: Hardware from Burial Location 15

Source: AmaTerra Environmental, Inc. 2023.

4.5.16 Burial Location 16 (Probable Intact Burial)

Provenience Information: Burial Location 16 was found in Backhoe Trench 9 at 104-130 cmbs (40.9-51.2 inches), in the southeast quadrant of the survey area.

Mortuary Characteristics: This burial location contained the remains of a wooden burial container, skeletal remains, and casket hardware. It was classified as a "probable intact burial." The eastern edge of the burial container was observed during the shallow scraping, and hand excavation revealed fragments of a dark-colored wooden casket sides and bottom in a 0.76 square meter area (1.07 by 0.74 meters). It was readily apparent that skeletal remains laid on top of the casket bottom. The body appeared to orient east-west, with the head to the west. The lower legs, from the os coxae to the tibia, were observed in the trench. In addition, the left hand's phalanges and metacarpals were also uncovered. Two rings (see below) were found with the phalanges. Archaeologists cleaned the area, partially exposed the bones, and mapped and photographed the area. Since these remains were more substantial and appeared at least partly intact, the location was covered with a piece of clear plastic tarp and backfilled. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

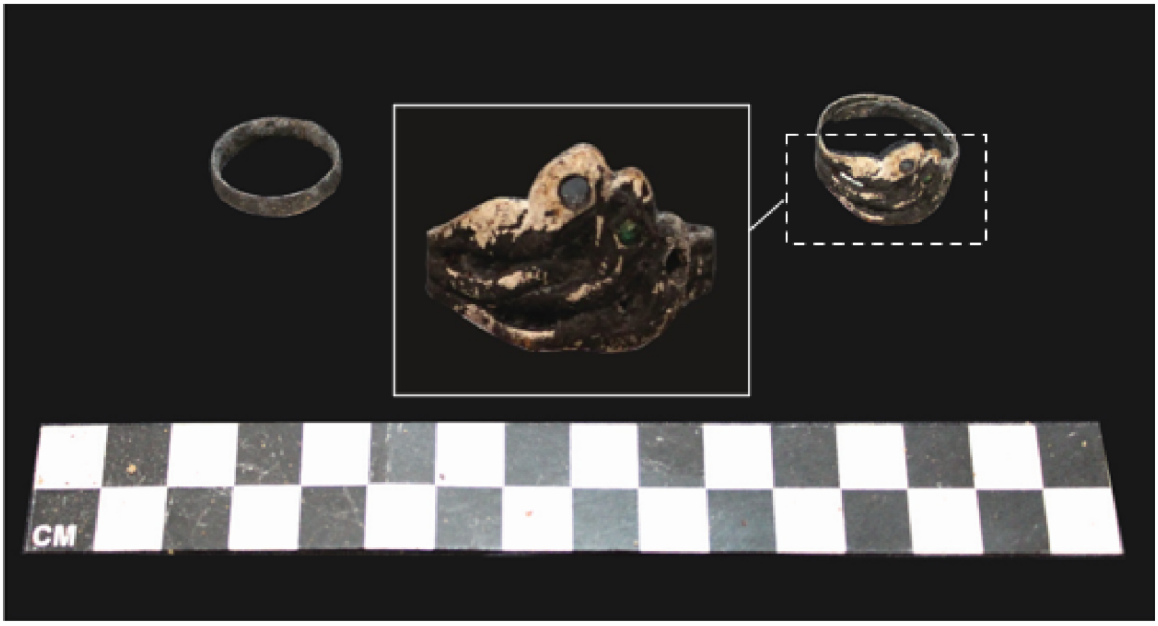
Skeletal Remains: A total of 91 skeletal fragments were recovered. The identified remains include a femur head, femur fragment, at least two metacarpals (hand bones), at least two proximal phalanges (finger bones), at least two distal phalanges (fingertips), at least three long bone fragments, and at least two metatarsals (foot bones). The remaining observed remains were left in place.

Associated Hardware: Twenty-nine artifacts associated with the casket were recovered (**Figure 4-47**). The identified remains include one ferrous lug arm, one white metal lug arm, one decorative white metal lug plate, four ferrous mounting plate fragments, one possible ferrous corner brace, and two hollow ferrous decorative handle or bar fragments. The hollow bar fragments appear similar to Handle Type 7, a single lug short bar handle from New Home Cemetery (Hill and Pye 2012:165-166). This handle type is called the Clover Leaf Bar, with a possible origin in the 1920s (**Figure 4-48**). The others remain unidentified ferrous fragments.

Associated Burial Goods: Two white metal rings were recovered: one a simple circular band and the other an intertwined snake design with green glass gemstones mounted on three snake heads. Both rings have blackened with oxidation (**Figure 4-49**).

Proposed Burial Date: The burial dates from the 1920s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-47: Hardware from Burial Location 16



Source: AmaTerra Environmental, Inc. 2023.

Figure 4-48: Handle Type 7 from New Home Cemetery

Note: Similar to the Hollow Bar Fragments found at Burial Location 16

4.5.17 Burial Location 17 (Removed Burial ca. 1960)

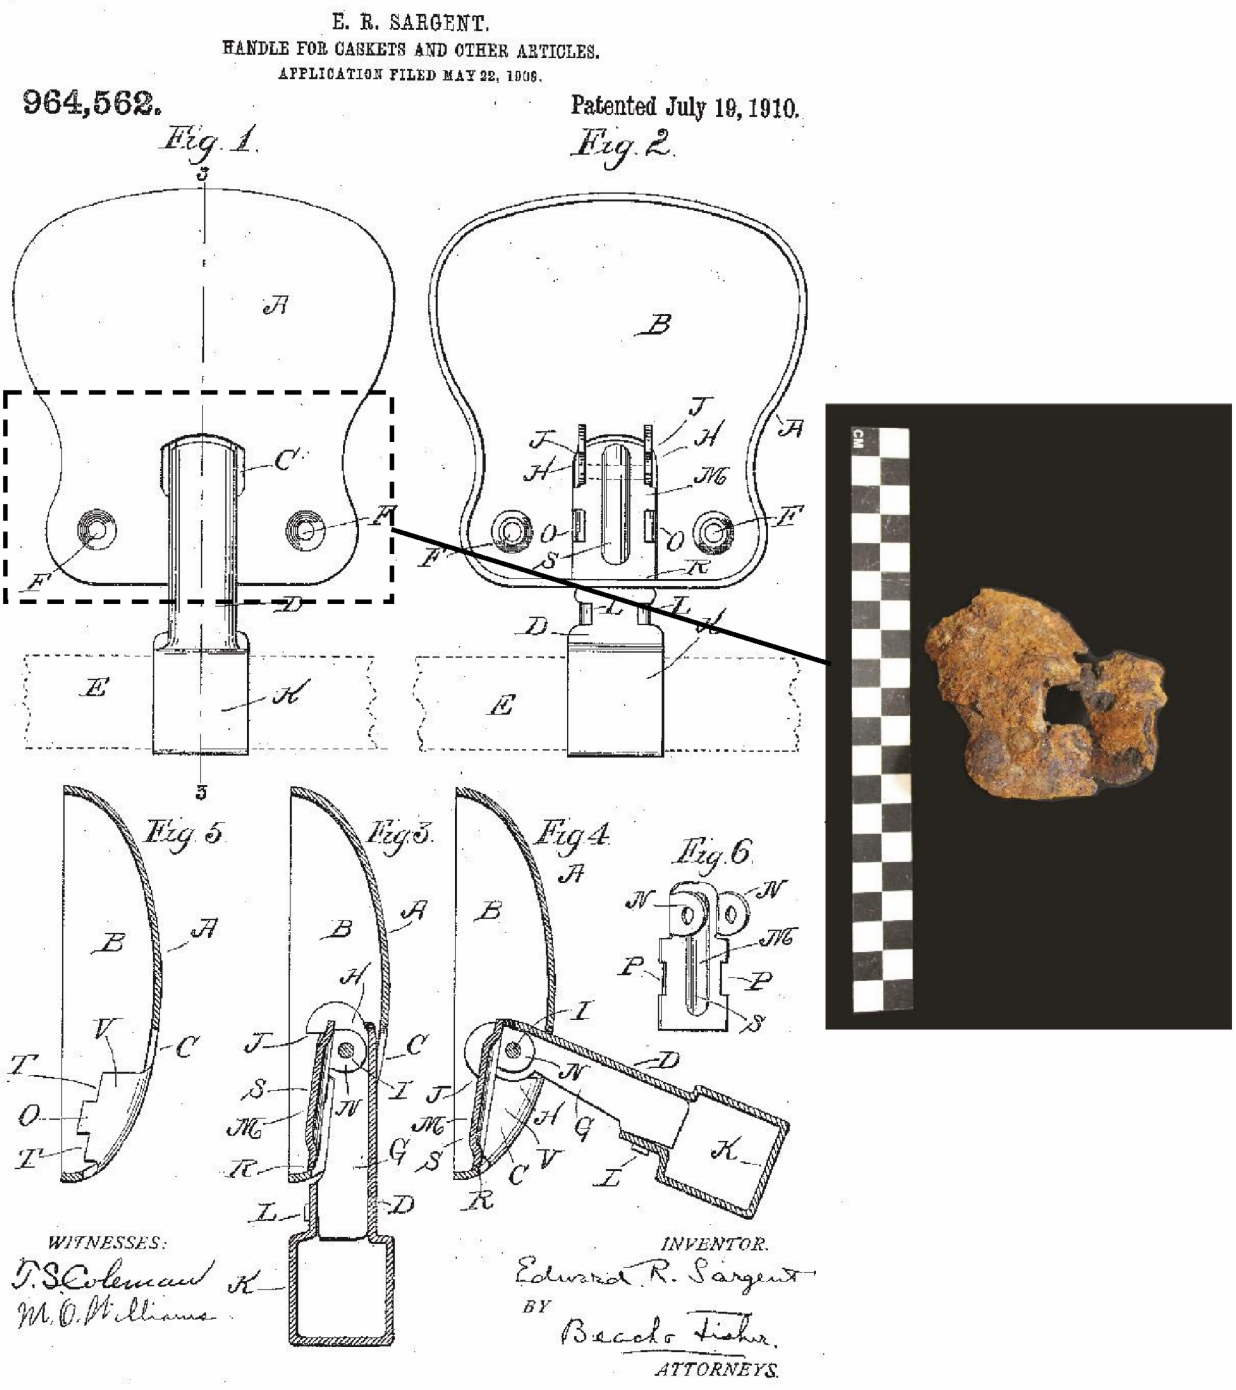
Provenience Information: Burial Location 17 was found in Backhoe Trench 9 at 116-132 cmbs (46.7-52.0 inches), in the southeast quadrant of the survey area (**Figure 4-50**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and casket hardware observed in a 0.28 square meter area (0.93 by 0.31 meters). The bone fragments were found along the trench wall at Burial Location 17, and hand exploration revealed a collection of bone on top of dark brown casket wood fragments. Although mixed slightly, remnants of the western edge of the casket as well as the bottom were visible surrounding the skeletal remains. The wood was highly friable, and disappeared to the north, south, and east. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Approximately 109 small fragments were recovered from the burial, including at least three ribs and one vertebra, and at least 12 cranial fragments.

Associated Hardware: One ferrous sheet metal decorative lug fragment was recovered, likely part of a double lug short bar handle. Two nails had fused to the lug. The shape matches the lug from Patent 964,562, approved on July 19, 1910, for a casket handle design (**Figure 4-51**).

Associated Burial Goods: No burial goods were found.



Proposed Burial Date: The burial dates from the 1910s to the 1950s based on the handle type and the end of the burial period in this section of the cemetery.

Figure 4-50: Burial Location 17

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-51: Hardware from Burial Location 17 and Similar Design Patent 964,564

Source: United States Patent and Trademark Office 2023.

4.5.18 Burial Location 18 (Removed Burial ca. 1960)

Provenience Information: Burial Location 18 was found in Backhoe Trench 9 at 94-109 cmbs (37.0-42.9 inches), in the southeast quadrant of the survey area (**Figure 4-52**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and skeletal remains. Fragments of a dark-colored wooden casket side panel were observed in a 0.29 square meter area (0.58 by 0.51 meters). One clear edge, likely the northern side of the container, could be seen. The wood was highly friable and disappeared in all directions apart from this small section about 20 cm (7.87 inches) long. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: One small fragment of bone was recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

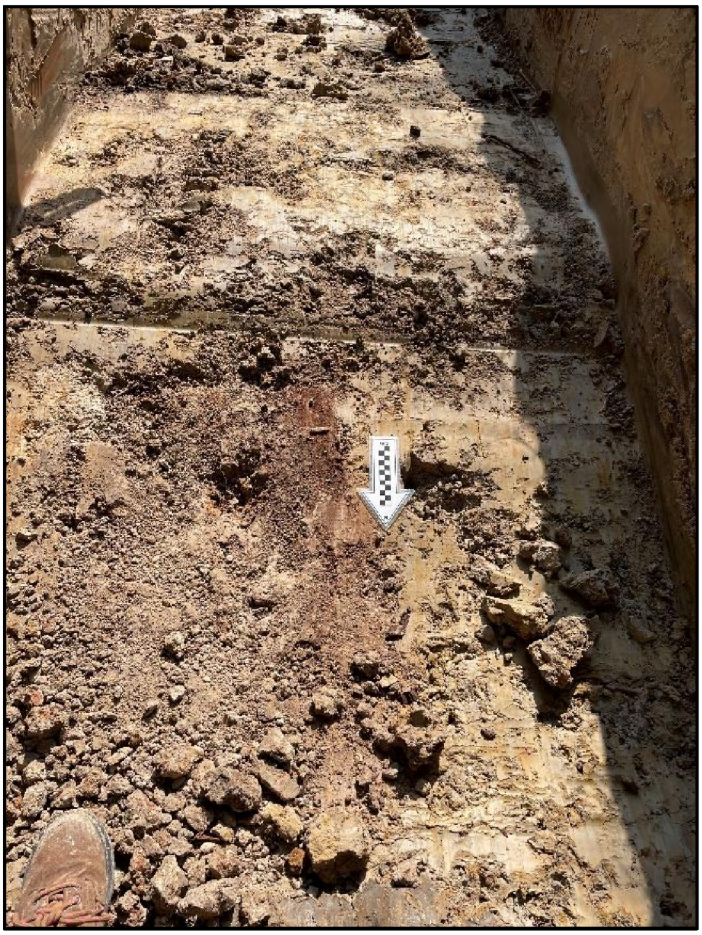
Figure 4-52: Burial Location 18

Source: AmaTerra Environmental, Inc. 2023.

4.5.19 Burial Location 19 (Removed Burial ca. 1960)

Provenience Information: Burial Location 19 was found in Backhoe Trench 9 at 87 cmbs (34.3 inches), in the southeast quadrant of the survey area (**Figure 4-53**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and skeletal remains. Dark colored wood fragments were found in a 0.31 square meter area (0.64 by 0.54 meters), most likely the bottom of a burial container. No shape was discernable. The wood fragments were mixed with the surrounding soil in a roughly oval stain approximately 20 x 50 cm (7.9-19.7 inches) in size. The area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.



Skeletal Remains: One fragmented bone, a possible rib, was recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

Figure 4-53: Burial Location 19

Source: AmaTerra Environmental, Inc. 2023.

4.5.20 Burial Location 20 (Removed Burial ca. 1960)

Provenience Information: Burial Location 20 was found in Backhoe Trench 9 at 90-92 cmbs (35.4-36.2 inches), in the southeast quadrant of the survey area (**Figure 4-54**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and skeletal remains. Dark colored wood fragments were found in a 0.45 square meter area (XX by XX meters), most likely the bottom of a burial container. No shape was discernable. The wood fragments were mixed with the surrounding soil in a roughly oval stain approximately 50 x 60 cm (19.7-23.6 inches) in size. The area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Four pieces of fragmented bone were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

Figure 4-54: Burial Location 20

Source: AmaTerra Environmental, Inc. 2023.

4.5.21 Burial Location 21 (Removed Burial ca. 1960)

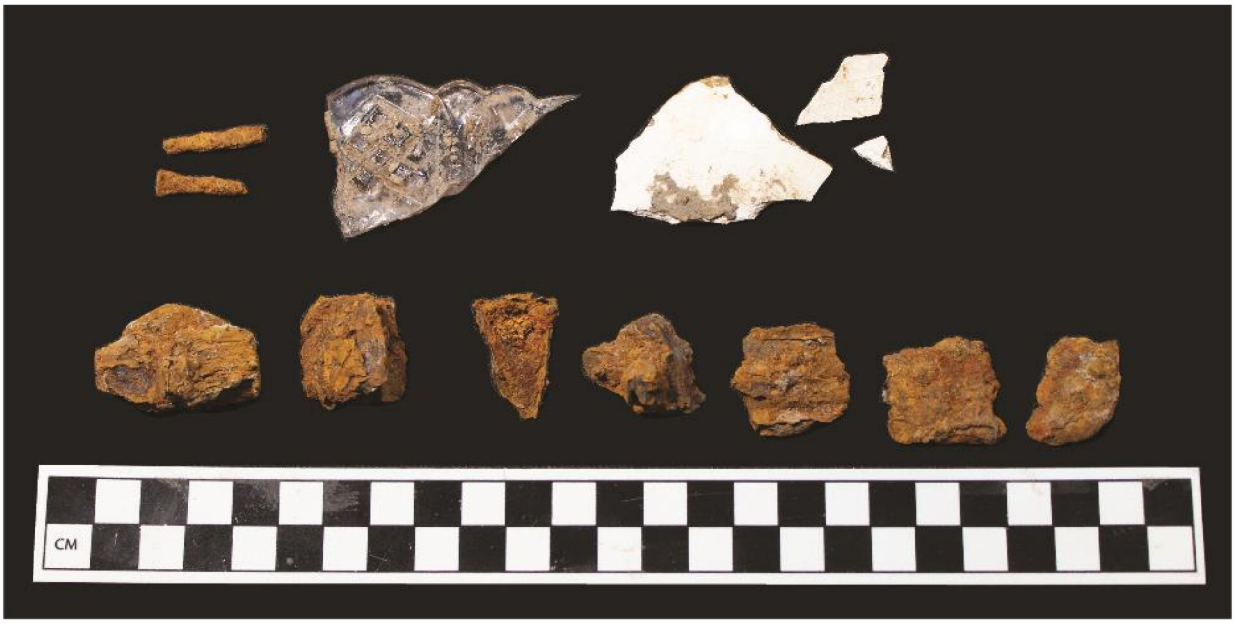
Provenience Information: Burial Location 21 was found in Backhoe Trench 11 at 90-92 cmbs (35.4-36.2 inches), in the southeast quadrant of the survey area. The location was situated within the contoured drainage basin near the center of the median, a few meters away from the edge of the contour (**Figure 4-55**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and casket hardware. Fragments of a dark-colored wooden casket bottom was observed in a 0.37 square meter area (0.63 by 0.61 meters). One clear edge, likely the eastern end of the casket, could be seen. The wood was highly friable, and disappeared to the north, west, and east. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Five small pieces of skeletal remains were recovered above the casket.

Associated Hardware: Seven ferrous hardware fragments were recovered as well as two ferrous wire nails. The hardware may be casket latch fragments or decorative ornaments (**Figure 4-56**).

Associated Burial Goods: One pressed glass bowl rim and three fragments of an ironstone plate were recovered in association with the burial container. One cobalt blue ceramic dish fragment was observed about 20 cm (7.9 inches) above the casket bottom, but it was not collected as it retained an unclear association with the burial (possibly debris in the removed burial backdirt ca. 1960.).



Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the hardware and the end of the burial period in this section of the cemetery.

Figure 4-55: Burial Location 21

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-56: Hardware and Associated Artifacts from Burial Location 21

Source: AmaTerra Environmental, Inc. 2023

4.5.22 Burial Location 22 (Removed Burial ca. 1960)

Provenience Information: Burial Location 22 was found in Backhoe Trench 13 at 70-75 cmbs (27.6-29.5 inches), in the northern half of the of the survey area near the center of the median. The location was situated within the contoured drainage basin near the center of the median, a few meters away from the edge of the contour (**Figure 4-57**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and coffin or casket hardware. Dark colored wood fragments were found in a 0.34 square meter area (0.66 by 0.59 meters) along with the hardware. No container shape was discernable, and the area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Twenty-three skeletal fragments were recovered. At least two appear to be rib fragments.

Figure 4-57: Burial Location 22

Source: AmaTerra Environmental, Inc. 2023.

Associated Hardware: One white metal caplifter, one white metal decorative flat bodied thumbscrew, one ferrous escutcheon, one possible ferrous grave marker stake fragment, and three ferrous round nails were recovered in the same areas as the coffin or casket wood (**Figure 4-58**). The caplifter is the same type as the example from Burial Location 28. The thumbscrew matches the Type 2 thumbscrew style of the Late Period (1900-1907) hardware from the Freedman's Cemetery (Davidson 1999:487) also Type 1 from New Home Cemetery (**Figure 4-59**). According to Hill and Pye (2012:200-201; slightly edited):

Thumbscrew Type 1 is associated with Escutcheon Type 1 and is represented by seven artifacts in Burial 16 in New Home Cemetery. The white metal finial of this thumbscrew is shaped like a broad fan with a tapered shoulder. The rays of the fan converge at the center, which features an embossed rectangle, before they fan back out to a lesser extend below the center. Two vine-like tendrils flank the bottom of this fan bundle and extend upward toward the center. The cylindrical base appears to be the sepal of a flower, from which the finial emerges. No matches to this thumbscrew have been located in patent records, but it has been matched to nine period catalogs and artifacts from four archaeological cemetery excavations. The catalogs range in date from ca. 1900 to 1912, and the cemeteries, which were located in Tennessee, Alabama, Arkansas, and Texas, range in date from 1893 until 1933.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from about 1900 to the 1950s based on the ornamentation type and the end of the burial period in this section of the cemetery.

Figure 4-58: Hardware from Burial Location 22

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-59: Thumbscrew Type 1 from New Home Cemetery

Source: Hill and Pye 2012:200-201.

4.5.23 Burial Location 23 (Partial Burial)

Provenience Information: Burial Location 23 was found in Backhoe Trench 13 at 70-75 cmbs (27.6-29.5 inches), in the northern half of the of the survey area near the center of the median. The location was situated within the contoured drainage basin near the center of the median, a few meters away from the edge of the contour.

Mortuary Characteristics: This burial location contained the remains of a wooden burial container, skeletal remains, and casket hardware. It was classified as a "partial burial." Fragments of the northern edge of a rectangular burial container, in a light-colored wood, and a medium brown wooden casket bottom were observed in a 0.59 square meter area (1.16 by 0.53 meters). The wood was highly friable. Within the casket perimeter, two long bones, likely tibias, were found in place. The body appeared to orient east-west, with the head to the west. The ends to the long bones extended into the trench wall. The area was cleaned, bones exposed, and the area mapped and photographed. Since these remains were more substantial and fragile, the long bones were left in place, covered with a piece of blue tarp, and backfilled. The feet are likely intact beyond the trench walls. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Fifty-four skeletal remains were recovered, all of which were very small and degraded. The remaining observed remains were left in place.

Associated Hardware: Eleven ferrous sheet metal casket fragments, one ferrous screw (slot head), one ferrous nail fragment, five pieces of casket wood, and one fragment of plate glass were recovered. The sheet metal fragments are likely lug pieces or ornaments. The plate glass indicates the coffin or casket had a viewing window (**Figure 4-60**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1920s based on the container type.

Figure 4-60: Hardware from Burial Location 23

Source: AmaTerra Environmental, Inc. 2023.

4.5.24 Burial Location 24 (Removed Burial ca. 1960)

Provenience Information: Burial Location 24 was found in Backhoe Trench 13 at 70-75 cmbs (27.6-29.5 inches), in the northern half of the of the survey area near the center of the median. The corresponds with the edge of the contoured drainage basin in the median (**Figure 4-61**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and skeletal remains. Fragments of a rectangular wooden casket side panel, most likely the northern side, was observed in a 1.28 square meter area (1.19 by 1.13 meters). This plank appeared only about ½-inch thick and was made from a soft light-colored wood with a knot (likely pine) that had been stained a dark brown color. No other parts of the casket were observed. Two sections of concrete curb, in a disjointed alignment, were found just north of the plank. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Fifteen small pieces of skeletal remains were recovered with the casket plank.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the burial container and the end of the burial period in this section of the cemetery.

Figure 4-61: Burial Location 24 with Disjointed Concrete Curbing to the North

Source: AmaTerra Environmental, Inc. 2023.

4.5.25 Burial Location 25 (Removed Burial ca. 1960)

Provenience Information: Burial Location 25 was found in Backhoe Trench 13 at 80-85 cmbs (31.5-33.5 inches), in the northern half of the of the survey area near the center of the median (**Figure 4-62**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and casket hardware. A dark-colored wooden container bottom was observed in a 1.47 square meter area (1.31 by 1.13 meters). No coffin or casket shape was discernable, and the area was quite disturbed. The wooden bottom turned into tiny fragments and dust when touched with a trowel, and only a trace of the burial container remained after exposure. However, the disarticulated remains of the container contents were recovered in the soils surrounding the wood. Notably, skull fragments and a wooden comb were all found together in the same 20 x 20 cm (7.9-7.9 inch) area near the west side of the trench. This burial seems to follow the typical orientation of the head to the west, and the remaining skeletal elements are absent from the container. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: A total of 116 bone fragments were recovered from the soil above the container bottom. Roughly 25 skeletal remains are skull fragments, including a mandible with embedded molar and premolar. Five bones are teeth, which have been identified as three molars and two incisors. In addition, ten bone fragments were found in the soil about 50 cm away from the container bottom,

consisting of at least two ribs and one vertebra. Given the proximity of the skeletal remains to the container, they were joined with the Burial Location 25's other remains.

Figure 4-62: Burial Location 25

Source: AmaTerra Environmental, Inc. 2023.

Associated Hardware: Twenty-eight artifacts associated with the burial container were observed and collected. Three white metal bar tips from either a single lug or double lug handle were recovered. Two of the tips had the same design, while the third appeared different (**Figure 4-63**). The two matching fragments were similar to the Handle Type 10, a single lug short bar handle from New Home Cemetery (Hill and Pye 2012:168-169). Called the Square Reeded Bar, this design has a possible origin in the 1890s. In addition, one caplifter with the same design as Burial Location 22, one possible ferrous casket lid support bar, five ferrous escutcheons or decorative plates, nine ferrous sheet metal fragments, four ferrous wire nails, and five miscellaneous ferrous fragments were collected.

Associated Burial Goods: One wooden comb was found alongside the cranial fragments (**Figure 4-64**).

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the types of burial hardware and the end of the burial period in this section of the cemetery.

Figure 4-63: Hardware from Burial Location 25

Source: AmaTerra Environmental, Inc. 2023.

Figure 4-64: Comb from Burial Location 25

Source: AmaTerra Environmental, Inc. 2023.

4.5.26 Burial Location 26 (Removed Burial ca. 1960)

Provenience Information: Burial Location 26 was found in Backhoe Trench 16 at 120 cmbs (47.2 inches), in the northwest quadrant of the of the survey area (**Figure 4-65**).

Mortuary Characteristics: This burial location contained the fragmentary remains of two side-by-side wooden burial containers, with a possible third to the north, in a 1.54 square meter area (1.66 by 1.24 meters). Two linear stains of dark-colored wood fragments were found in a 40 x 60 cm (15.7 x 23.6 inch) area. The stains exhibited two parallel edges a few inches apart, possibly indicating two burial containers side-by-side (east-west). In addition, another stain was observed 30 cm (11.8 inches) to the north, in a 25 x 35 cm (9.8 x 13.7 inch) area. No clear shape was discernable with this more northern stain. The area was quite disturbed, and other than the parallel edges, no container outline could be discerned. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown.

Figure 4-65: Burial Location 26

Source: AmaTerra Environmental, Inc. 2023.

4.5.27 Burial Location 27 (Removed Burial ca. 1960)

Provenience Information: Burial Location 27 was found in Backhoe Trench 15 at 90-100 cmbs (35.4-39.4 inches), in the southwest quadrant of the survey area.

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and coffin or casket hardware. Dark colored wood fragments were found in a 0.67 square meter area (1.11 by 0.62 meters) along with an array of burial container hardware. No shape was discernable. The wood fragments were mixed with the surrounding soil. The area was quite disturbed. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: Sixteen artifacts associated with the burial container were observed and collected. One single lug with a short bar was recovered, with one of the lug arms still attached. In addition, fragments of another single lug short bar lug, one separate lug arm with square handle hole that matches the attached lug arm, and three white metal short bar tips, were collected from this location. Two of the tips had wooden dowels attached. In addition, three ferrous sheet metal

fragments, possibly ornaments or latch hardware, one thick wire lid support, and four wire nails were recovered (**Figure 4-66**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from about 1890 to the 1950s based on the hardware and the end of the burial period in this section of the cemetery.

Figure 4-66: Hardware from Burial Location 27

Source: AmaTerra Environmental, Inc. 2023.

4.5.28 Burial Location 28 (Probable Intact Burial)

Provenience Information: Burial Location 28 was found in Backhoe Trench 15 at 120 cmbs (47.2 inches), in the southwest quadrant of the survey area.

Mortuary Characteristics: This burial location contained the remains of a wooden burial container, skeletal remains, and casket hardware. It was classified as a "probable intact burial." The edges of the burial container were observed during the shallow scraping, and hand excavation revealed fragments of a dark-colored wooden casket bottom in a 0.87 square meter area (1.11 by 0.80 meters). It was readily apparent that skeletal remains, casket hardware, and a broken bottle laid on top of the casket bottom. The area was cleaned, bones partly exposed, and archaeologists mapped and photographed the area. Since these remains were more substantial and appeared at least partly intact, the location was covered with a piece of blue tarp and backfilled. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Forty-five skeletal fragments were recovered. At least half of these fragments are from the cranium. The remaining observed remains were left in place.

Associated Hardware: One white metal short bar tip from either a single lug or double lug handle was recovered. The tip is similar to the Type B casket handle at Burial 50 (dating to 1906-1923) at the Phillips Memorial Cemetery (Dockall et al 1996:81-82). In addition, one white metal caplifter and seven ferrous sheet metal fragments were collected (**Figure 4-67**). The caplifter exhibited the same design as the example found at Burial Location 22. The sheet metal fragments were difficult to identify but may be possible lug arm or lug fragments.

Figure 4-67: Hardware from Burial Location 28

Source: AmaTerra Environmental, Inc. 2023.

Associated Burial Goods: Seven colorless rectangular bottle glass fragments were recovered: two plain fragments, one bottle body embossed with graduated lines and numbers, one body shard embossed with "…Frigid Fluid C…" "..Chicago," one colorless bottle neck with screw threads, one colorless bottle neck with a broken lip, and one bottle base (**Figure 4-68**). The embossed body fragments matched the logo of the Frigid Fluid Company, a manufacturer of embalming fluid from ca. 1892 to the present (https://frigidfluid.com/pages/about). The bottle style is similar to others made in the early 1900s. The bottle base contained a maker's mark of an "I in a diamond" indicative of the Illinois Glass Company. The Illinois Glass Company made utilitarian machine-made bottles from ca. 1915 to 1929 (Lockhart at al. 2005).

Proposed Burial Date: The burial dates from the 1900s to the 1950s based on the handle type, bottle manufacture dates, and the end of the burial period in this section of the cemetery.

Figure 4-68: Embalming Fluid Bottle from Burial Location 28

Source: AmaTerra Environmental, Inc. 2023.

4.5.29 Burial Location 29 (Probable Intact Burial)

Provenience Information: Burial Location 29 was found in Backhoe Trench 15 at 100-110 cmbs (39.4-43.3 inches), in the southwest quadrant of the survey area. The location was positioned along edge of the contoured drainage basin in the median.

Mortuary Characteristics: This burial location contained the remains of a wooden burial container, skeletal remains, and casket hardware. It was classified as a "probable intact burial." The southern side of the rectangular burial container were observed during the shallow scraping, and hand excavation revealed fragments of a dark-colored wooden casket bottom in a 0.61 square meter area (1.14 by 0.55 meters). Exploration of the southern side of the casket exposed a decayed wood section, but parts of a double lug swing bail was observed *in situ*.

It was readily apparent that skeletal remains and casket hardware laid on top of the casket bottom. The area was cleaned, bones partly exposed, and the area mapped and photographed. Since these remains were more substantial and appeared at least partly intact, the location was covered with a piece of plastic tarp and backfilled. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Only six small skeletal fragments were recovered at this time, the remaining observed remains were left in place.

Associated Hardware: One decorative white metal flat bodied thumbscrew was recovered (**Figure 4-69**).

Associated Burial Goods: Two black four-hole prosser buttons and one brass snap cover were recovered (**Figure 4-70**). These are associated with clothing remains.

Proposed Burial Date: The burial dates from about 1890 to the 1920s based on the ornamentation type of the casket hardware.

4.5.30 Burial Location 30 (Removed Burial ca. 1960)

Provenience Information: Burial Location 30 was found in Backhoe Trench 15 at 100-110 cmbs (39.4-43.3 inches), in the southwest quadrant of the survey area. This corresponds with the contoured drainage basin near the center of the median, a few meters away from its edge (**Figure 4-71**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container, skeletal remains, and casket hardware. The west section of a dark-colored wooden rectangular casket bottom was observed in a 0.97 square meter area (1.08 by 1.08 meters). The southern edge could be seen clearly in the trench floor. The wooden bottom contained thin planks and decayed sections of wood, with a few roots running through the area. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: Three small pieces were collected, likely cranial fragments.

Associated Hardware: Twenty artifacts associated with the burial container were observed and collected. Two ornamental tacks, one ferrous fragment that had been part of a latching mechanism, one possible ferrous decorative ornament, nine ferrous wire nails and tacks, and seven ferrous sheet metal fragments were recovered (**Figure 4-72**). No designs could be discerned.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the shape of the burial container and the end of the burial period in this section of the cemetery.

4.5.31 Burial Location 31 (Removed Burial ca. 1960)

Provenience Information: Burial Location 31 was found in Backhoe Trench 15 at 130-138 cmbs (51.2-54.3 inches), in the southwest quadrant of the survey area. The location was situated within the contoured drainage basin near the center of the median, a few meters away from its edge (**Figure 4-73**).

Mortuary Characteristics: This burial location contained the fragmentary remains of a wooden burial container and casket hardware. The southeastern section of a dark-colored wooden rectangular casket bottom was observed in a 0.88 square meter area (1.22 by 0.76 meters). One clear edge to the south could be seen in the trench floor. The wooden bottom contained thin planks and decayed sections of wood, with a few roots running through the area. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: Three matching white metal bar tips from a single or double lug short bar were recovered. The ends of these tips were square. One ferrous sheet metal fragment, a possible corner bracket, was also collected (**Figure 4-74**).

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial dates from the 1890s to the 1950s based on the shape of the burial container and the end of the burial period in this section of the cemetery.

Figure 4-74: Hardware from Burial Location 31

Source: AmaTerra Environmental, Inc. 2023.

4.5.32 Burial Location 32 (Removed Burial ca. 1960)

Provenience Information: Burial Location 32 was found in Backhoe Trench 19 at 100-130 cmbs (39.4-51.2 inches), in the southwest quadrant of the survey area and about 3 m east of the underground water line [redacted]

Mortuary Characteristics: This burial location contained the remains of a rectangular wooden burial casket observed in a 0.49 square meter area (1.09 by 0.52 meters). The north and west walls of the burial container were found in the trench floor, and hand excavation revealed the bottom of the burial container. The container wood appeared to be cedar or pine, approximately ½-inch thick. At least 120 cm (47.2 inches) of the south wall and 61 cm (24.0 inches) of the west wall remained intact. The casket appeared largely undecorated, and no lid was observed. The container floor appeared to be the same thickness as the walls. All the wood had been stained a medium brown. The northwest section of the casket was explored to locate any of its contents, but it remained empty of any skeletal remains, burial goods, or casket hardware. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown, although the preservation of the burial container indicates it may have been interred in the 1940s or 1950s.

Figure 4-75: Burial Location 32

Source: AmaTerra Environmental, Inc. 2023.

4.5.33 Burial Location 33 (Removed Burial ca. 1960)

Provenience Information: Burial Location 33 was found in Backhoe Trench 19 at 100-130 cmbs (39.4-51.2 inches), in the southwest quadrant of the survey area and about three meters east of the underground water line [redacted]

Mortuary Characteristics: This burial location contained the remains of a rectangular wooden burial casket observed in a 0.44 square meter area (1.04 by 0.50 meters). The south and west walls of the burial container were found in the trench floor, and hand excavation revealed the bottom of the burial container. The container wood appeared to be cedar or pine, approximately ½-inch thick, and at least 110 cm (43.3 inches) of the south wall and 61 cm (24.0 inches) of the west wall remained intact. The casket appeared largely undecorated, and no lid was observed. The container floor appeared to be the same thickness as the walls. All the wood had been stained a medium brown. The southeast section of the casket was explored to locate any of its contents, but it remained empty of any skeletal remains, burial goods, or casket hardware. The soil around the remnant appeared as mottled pale brown (10YR 6/3), strong brown (7.5YR 5/6), and dark gray (7.5YR 4/1) clay. No grave shaft was observed.

Skeletal Remains: No skeletal remains were recovered.

Associated Hardware: No coffin or casket hardware was recovered.

Associated Burial Goods: No burial goods were found.

Proposed Burial Date: The burial date is unknown, although the preservation of the burial container indicates it may have been interred in the 1940s or 1950s.

5 Conclusions and Recommendations

In December 2022, AmaTerra Environmental, Inc. archaeologists conducted field investigations to determine if the proposed METRO University Corridor Project would affect any intact burials or burial remnants associated with the Evergreen Negro Cemetery, a registered Texas Historic Cemetery. The work was conducted under Texas Antiquities Permit 30784, with Mindy Bonine serving as Principal Investigator. The investigation was conducted [redacted] located in the Fifth Ward, City of Houston, Texas. Conducted in two parts, the investigation included fieldwork consisting of trench scrapes through all accessible quadrants of the survey area to locate physical evidence of burials, and archival research to determine the timeline of the construction and improvement of Lockwood Drive and the historical impacts to the cemetery grounds.

The historical map review and archival search found very little primary source documentation that expanded upon the known history of the Evergreen Negro Cemetery. However, research into the installation and subsequent expansion of Lockwood Drive through the Evergreen Negro Cemetery did return results. According to archival research, Lockwood Drive bisected the cemetery sometime between 1929 and 1939. Afterwards, plans for the Lockwood Drive expansion appeared to correlate with the anticipated construction of IH 10 to the north of the cemetery. These plans were in place by 1955. The dates when the disinterment and road construction took place appeared to occur on either side of 1960 (from about 1957 to 1963). According to Dr. Williams (personal communication, February 15, 2023), some descendants did not receive a notice from the City of Houston until 1963, after the road construction was completed. As part of the research into the Lockwood Drive expansion, one plat map associated with the Evergreen Negro Cemetery was located, consisting of only a small subsection of the property. Unfortunately, no complete formal cemetery plat was located, nor was a historical list of interments located. A listing of the 4,605 individuals buried at the cemetery was compiled though a survey of remaining burial markers and a search of Harris County death certificates in the early 2000s (www.findagrave.com).

The archaeological investigation [redacted] in alignment with the existing boundaries of the Evergreen Negro Cemetery revealed 33 localities containing evidence of a burial (**Table 5-1**). These localities included human bone, coffin or casket wood, hardware, or personal items associated with a grave. Of these, three (3) localities contained sufficient human bone to be considered “predominantly intact” burials as well as one (1) locality that contained a “partial” burial, comprised of the tibias (lower leg) that extended into the trench wall but no other skeletal remains. These four localities were left in place at the conclusion of fieldwork pending registration as an abandoned cemetery and coordination for the removal of the remains. This location was given the archaeological site trinomial 41HR1270.

Table 5-1: Summary of Burial Locations found During the Archaeological Investigations

Burial Location	Burial Composition	Associated Trench Scrape	Top Depth (cmbs)	Area (square meters)	Skeletal Material	Coffin/Casket Material	Coffin/Casket Hardware	Burial Goods	Burial Date Range	Identified Hardware Description	Burial Goods Description
1	Removed	3	95	0.25	58	●	1		1870s-1920s	White metal caplifter/decorative knob (n=1))	
2	Removed	3	60	0.36		●	4		1890-1950s	White metal short bar tips (n=4)

5.1 NRHP Evaluation

Cemeteries have profound personal and cultural significance to the communities they serve. Thus, these resources have been addressed specifically as they relate to their eligibility for listing in the NRHP. Cemeteries are present in every community in the United States, and although they have significance on an individual level (the descendants of those buried at the cemetery, for example), their local, regional, and national significance must be assessed using stricter metrics. According to the National Park Service's bulletin for evaluating cemeteries:

"Individual and collective burial places can reflect and represent in important ways the cultural values and practices of the past that help instruct us about who we are as a people. Yet for profoundly personal reasons, familial and cultural descendants of the interred often view graves and cemeteries with a sense of reverence and devout sentiment that can overshadow objective evaluation. Therefore, cemeteries and graves are among those properties that ordinarily are not considered eligible for inclusion in the NRHP unless they meet special requirements. The National Register Criteria for Evaluation include considerations by which burial places may be eligible for inclusion in the National Register." (National Register Bulletin 41; Potter and Boland 1992:1).

In general, cemetery historic properties must meet one or more of the seven criteria considerations (A-G) in addition to one or more of the four core criteria (A-D) to be considered eligible for listing. Archaeological sites, however, may be evaluated under Criterion D without the additional considerations.

The Evergreen Negro Cemetery, including all the burial grounds from Carroll Oliver Way to southbound Lockwood Drive, and northbound Lockwood Drive to Sakowitz Street, fall within the APE for historic resources investigations for the Project, as it is adjacent to at-grade Project activities. This assessment has been documented in the NEPA historic resources survey for the METRORapid University BRT Corridor Project (METRONext 2023). The NRHP eligibility recommendations for the Evergreen Negro Cemetery, based on the historic resources review, are as follows:

1. Although the cemetery is the first African American cemetery in the Fifth Ward, it does not appear to have a direct association with a specific event important to the broader African American experience in Houston. Therefore, the Evergreen Negro Cemetery is recommended not eligible under Criterion A.
2. The persons of note buried in the cemetery do not rise to the level of outstanding importance and therefore is recommending not eligible under Criterion B.
3. The Evergreen Negro Cemetery was not designed by a master, nor possess high artistic values or distinctive characteristics and therefore is recommended not eligible under Criterion C.
4. The cemetery itself follows the nationwide "rural" or "garden" cemetery movement which establishes park-like settings surrounding monuments low to the ground (Potter and Boland 1992). Therefore, the cemetery is not likely to yield unique information on twentieth century

burial practices of African American communities in urban environments, and is not eligible under Criterion D.

In addition, the abandoned portion of the Evergreen Negro Cemetery, which is in the archaeological APE, must be evaluated for its eligibility for listing in the NRHP as an archaeological site. This site is not within the current boundaries of the Evergreen Negro Cemetery at all but consists of the area that was forsaken as a burial ground and reclassified as a road ROW. The National Register defines an archaeological site as a "place or places where the remnants of a past culture survive in a physical context that allows for the interpretation of these remains" (National Register Bulletin 36; Little et al. 2000). [redacted] As this section of the cemetery had been abandoned ca. 1960, it just exceeds the minimum date requirement of 50 years of age or older. If the probable dates of internment are taken into consideration, a few additional decades can be added to the abandonment date.

As an archaeological site, the area must have the potential to yield important information to the study of prehistory or history to be eligible under Criterion D. Unless archaeological sites contain standing above-ground elements, they are not generally evaluated under Criteria A-C. In addition, the site must have sufficient integrity to produce important information to be considered eligible. Generally, cemetery grounds that have been "substantially disinterred" do not meet these standards of integrity, unless other considerations apply (Potter and Boland 1992:19).

The cultural material documenting the 33 grave locations [redacted] comprise the archaeological evidence of a cemetery in this area. Most of these locations contained burial remnants indicative of a disinterment of the body. Three of these locations contained evidence of intact burials. Artifactual evidence recovered during the survey investigations indicates these burials were conducted after 1900, likely no earlier than 1890 and up to 1950. The burials appear to follow twentieth century practices with the remains housed in a casket style wooden burial container and the body in a supine east-west alignment with the head facing west. When the disinterment took place, all associated monuments, grave decorations, and landscaping were removed as well, substantially and permanently altering the appearance of this portion of the cemetery. The most direct way to correctly identify the individuals previously buried there was also lost. In terms of overall information potential of the remaining dataset, the sample size of burials is small and largely incomplete, with little intact provenience data. Therefore, the site does not have sufficient integrity to yield unique information on twentieth century burial practices of African American communities in urban environments. ***The site is not recommended as eligible for NRHP listing under Criterion D. As the archaeological site does not have any above-ground elements, it is not considered eligible under NRHP Criteria A-C.***

5.2 SAL Evaluation

Cultural resources, including archaeological sites, historical properties, and cemeteries, can be nominated as an SAL if the resource resides on land owned by the State of Texas or a political subdivision thereof (TAC §191.092). The abandoned section of the Evergreen Negro Cemetery, within

[redacted] the current cemetery, is owned by the City of Houston, a political subdivision of the State of Texas. This area is also within the archaeological APE for the Project and must be evaluated for its eligibility as a SAL.

The TAC contains provisions for evaluating archaeological sites for SAL nomination in addition to verifying the existence of a cemetery (TAC §26.10a, b). The archaeological investigations have documented and confirmed interments [redacted] that are associated with the Evergreen Negro Cemetery. Human remains, burial containers, and associated burial goods were all located in subsurface contexts the median. Thus, the median, as well as the area covered by Lockwood Drive, are part of an abandoned cemetery, as defined by the Texas HSC (§711.001) and the TAC (§25.1).

In addition, the abandoned portion of the cemetery falls within the definition of an archaeological site as "any land or marine-based place that contains material remains of past human life or activities in their original or historical context that are at least 50 years of age" (TAC §25.1). An archaeological site is eligible for official SAL designation if the site contains unique and culturally significant information in a preserved context. The criterion for evaluating a SAL is slightly different than the criteria for evaluating a cultural resource for the NRHP. In addition to overall information potential and integrity, eligible SALs may include unique or rare resources, resources that can contribute data for research theories or methods of preservation, and resources that are at risk for vandalism or relic collecting. The five criteria used for evaluation as an SAL are as follows (from TAC Title 13, Part 2, Chapter 26, Subchapter C, Rule §26.10a). One or more of these criteria can be used for evaluation:

1. the site has the potential to contribute to a better understanding of the prehistory and/or history of Texas by the addition of new and important information;
2. the site's archeological deposits and the artifacts within the site are preserved and intact, thereby supporting the research potential or preservation interests of the site;
3. the site possesses unique or rare attributes concerning Texas prehistory and/or history;
4. the study of the site offers the opportunity to test theories and methods of preservation, thereby contributing to new scientific knowledge; and
5. there is a high likelihood that vandalism and relic collecting has occurred or could occur, and official landmark designation is needed to ensure maximum legal protection, or alternatively, further investigations are needed to mitigate the effects of vandalism and relic collecting when the site cannot be protected.

Previous investigations of historical African American cemeteries have been conducted in Harris and surrounding counties, including the Pioneer Cemetery, New Home Cemetery, Third New Cemetery, and Phillips Memorial Cemetery (**Table 5-2**). In addition, work at the Freedman's Cemetery in Dallas has been the vanguard of historical African American cemetery research in the state (and elsewhere), providing a wealth of information. Investigations into the five cemeteries listed above have produced excellent analyses, including African American mortuary trends and changes over time, socioeconomic indicators of the community served by the cemetery, the overall health and potential occupations of the interred, demographic data collection and analysis, and African American

resistance strategies to the dominant Eurocentric culture over the past 160 years. The potential dataset at the abandoned portion of the Evergreen Negro Cemetery is smaller compared to these resources, both in terms of the number of burials that can be used in skeletal comparative analysis as well as their overall preservation and integrity, but the potential dataset is no less capable of providing new and important information.

Table 5-2 Summary of Neighboring Cemetery Investigations

Cemetery	African American?	No. of Burials Investigated	Burial Dates
Freedman's Cemetery, Dallas, Dallas County	Yes	1,157	1869-1907
Pioneer Cemetery, Brazoria County	Yes	23	Late 19th-early 20th century
Oscar Abstein Cemetery, Harris County	No	4	Late 19th century
New Home Cemetery, Sugar Land, Fort Bend County	Yes	24	1895-1960s
Third New Cemetery, Houston, Harris County	Yes	435+	Late 19th century
Phillips Memorial Cemetery, Galveston County	Yes	53	Late 19th-early 20th century
Evergreen Negro Cemetery, Harris County	Yes	33	1890-1970

Sources: Davidson 1999; Foster and Nance 2002; Broehm et al. 2004); Dockall et al. 1996; Tiné and Boyd 2003; Norment et al. 2016.

Although the overall potential dataset of the site is less robust compared to other resources in the same class, this resource is still part of a very small subset of historical cultural resources, both in terms of being a place to honor and remember the dead as well as one that served a disenfranchised minority group. As such, the site possesses rare attributes concerning Texas history, and a study of the site can contribute important scientific knowledge to burial practices of the African American community in Houston. In addition, preliminary information indicates that the internments within this section of the Evergreen Negro Cemetery span a slightly later time period than those previously investigated (with some possible overlap), and the information obtained could potentially track the changes in burial practices by Houston's Black community from the late nineteenth century (such as those in the Third New Cemetery) through the mid twentieth century (such as those at site 41HR1270, the abandoned section of the Evergreen Negro Cemetery). Research into the history of the site can also speak to the process of forced abandonment of minority public spaces in advance of major changes to the urban landscape from the development of the federal highway system. The fact that very little documentary evidence has been found concerning the history of the Evergreen Negro Cemetery indicates that archaeological data would provide the best available dataset for future research.

The abandoned portion of the Evergreen Negro Cemetery, site 41HR1270, is recommended eligible as a SAL. Site 41HR1270 is evaluated as having state-level information potential and is a unique or rare resource. Archaeological and historical investigations at the site can provide new information on several topics. For example, African American mortuary practices from the mid nineteenth century to the mid twentieth century could be traced through comparative analysis with other cemeteries. In addition, the Evergreen Negro Cemetery was a segregated burial ground separate from other radical and ethnic groups, rather than a subsection of a larger municipal cemetery. It was managed by the community it served, and more authentic African American burial customs and cemetery management may be expressed at the cemetery without oversight outside the community. Also, study of the cemetery and its history can be linked to the general history of the Fifth Ward and used to track its economic and social changes over time.

The requirements of the Texas HSC that pertain to cemeteries dictate that before any improvements to the Lockwood Drive ROW can take place, all the remaining burials must be removed and reinterred in a dedicated burial ground. Once complete, the cemetery's dedication will be removed, and the site will not be preserved for further research. The construction of Project components would then proceed within the APE. As such, this SAL-eligible resource will be affected by the proposed Project, and consideration must be given to the information potential of this resource. It is recommended that mitigation investigations are employed to disinter the identified burials and recover the most information possible prior to the removal of the cemetery dedication.

5.3 Texas Health and Safety Code

Several regulations under the Texas HSC apply to the portion of the Evergreen Negro Cemetery that is within the archaeological APE for the Project. In particular, the owner of a property, in this case the City of Houston, cannot make improvements that disturb the cemetery until the human remains are removed (HSC §711.010 a). To remove a cemetery dedication in order to use the land for improvements, the City of Houston must petition the district court for the removal of the dedication, and the court must agree that it is in the "public interest" to do so. All human remains must be removed either before or after the ruling and reinterred in a dedicated burial ground (HSC §711.010 b). Normally, a written order from the state registrar and district court is required, unless the graves are unmarked or if written consent is given by the cemetery organization, plot owners, and the individual's descendants. As these are unmarked graves, an archaeologist can remove them without a written order (HSC §711.0105 (a) and HSC §711.004 (f-1)).

Following these regulations as well as the regulations outlined in the TAC, the following actions have either been proposed or executed as of this writing:

- Notice of a newly discovered unknown or abandoned cemetery was filed with the Harris County Clerk on February 10, 2023. The county clerk will in turn notify the THC.
- A Draft work plan : 1) application for and issuing of a new Texas Antiquities Permit, 2) burial exhumation, 3) analysis of recovered material including human skeletal remains and associated burial artifacts, 4) additional archival investigations to determine the possible identity of the individuals removed from the median ca. 1960, 5) production of a full report

of findings, 6) reinternment of identified burials at the Evergreen Negro Cemetery, 7) curation of paperwork associated with the project and 8) inadvertently discovery plan. This work plan.has been prepared for review with this report for consideration of and consultation with the THC.

- Upon concurrence by the THC, the work plan will serve as the scope of work for anticipated conditions to be included in a new Texas Antiquities Permit that is required to be obtained prior to relocation of a SAL-eligible resource.
- The work plan will be approved by the project stakeholders before enacted, including the cemetery organization (Project RESPECT), the landowner (City of Houston), the project sponsors (Metro and FTA), the Harris County Historical Commission, and the THC.
- Reinterment of all remains, casket hardware, and burial goods will be conducted within the boundary of the Evergreen Negro Cemetery, at the direction of the cemetery organization.
- Documentation of the removal of remains will be provided in the petition to the district court.
- No construction activities will be conducted within the abandoned portion of the Evergreen Negro Cemetery prior to the THC Permit Approval and agreement on the approved work plan and ruling from the district court.

TNRC	Texas Natural Resources Code

1 Statement of Purpose

The purpose of this Archaeology Mitigation Work Plan (AMWP) is to identify the primary parties involved and the roles they serve in the archaeological work for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, provide guidance on the process of coordination and review, and to discuss anticipated methods and procedures to mitigate effects to a portion of the Evergreen Negro Cemetery, designated as site 41HR1270, a State Antiquities Landmark (SAL)-eligible resource. This AMWP will guide future archaeological work prior to Project construction.

2 Management Summary

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are continuing the environmental review process for the Project in the City of Houston, Harris County, Texas. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

The purpose of this AMWP is to provide compliance with the Antiquities Code of Texas (ACT; Texas Natural Resources Code [TNRC], Title 9, Chapter 191) and its associated regulations (Texas Administrative Code [TAC] Title 13, Part 2, Chapter 26) by documenting mitigation measures to the Evergreen Negro Cemetery, a historic African American cemetery located in the Fifth Ward of Houston, an archaeological resource eligible for designation as a SAL. The resource is located within the Area of Potential Effect (APE) for the proposed Project, [redacted] Additionally, the provisions of the Texas Health and Safety Code (HSC; Title 8, Subtitle C, Chapter 711) relating to abandoned cemetery properties will be addressed with this AMWP.

3 Roles and Responsibilities

This section defines the roles and responsibilities of the parties involved in the coordination and implementation of the archaeological mitigation work for the Project.

- FTA—Providing funding in support of the Project. As the Lead Federal Agency for the project, the FTA is responsible for compliance pursuant to the National Environmental Protection Act (NEPA) and Section 106 of the National Historic Preservation Act (NHPA), as amended.
- METRO—Main project proponent and sponsor of the METRORapid University Corridor Project in the City of Houston. As a political subdivision of the State of Texas, METRO is responsible for compliance with the ACT.
- Texas Historical Commission (THC)/State Historic Preservation Office (SHPO)—The THC serves as the SHPO for Texas and will be referred to as SHPO throughout this document. The SHPO will be responsible for reviewing all project related reports and coordination documentation submitted in compliance with Section 106 of the NHPA and the ACT. Additionally, the SHPO will provide guidance to other parties involved in the archaeological work on the Project, where required and/or requested.

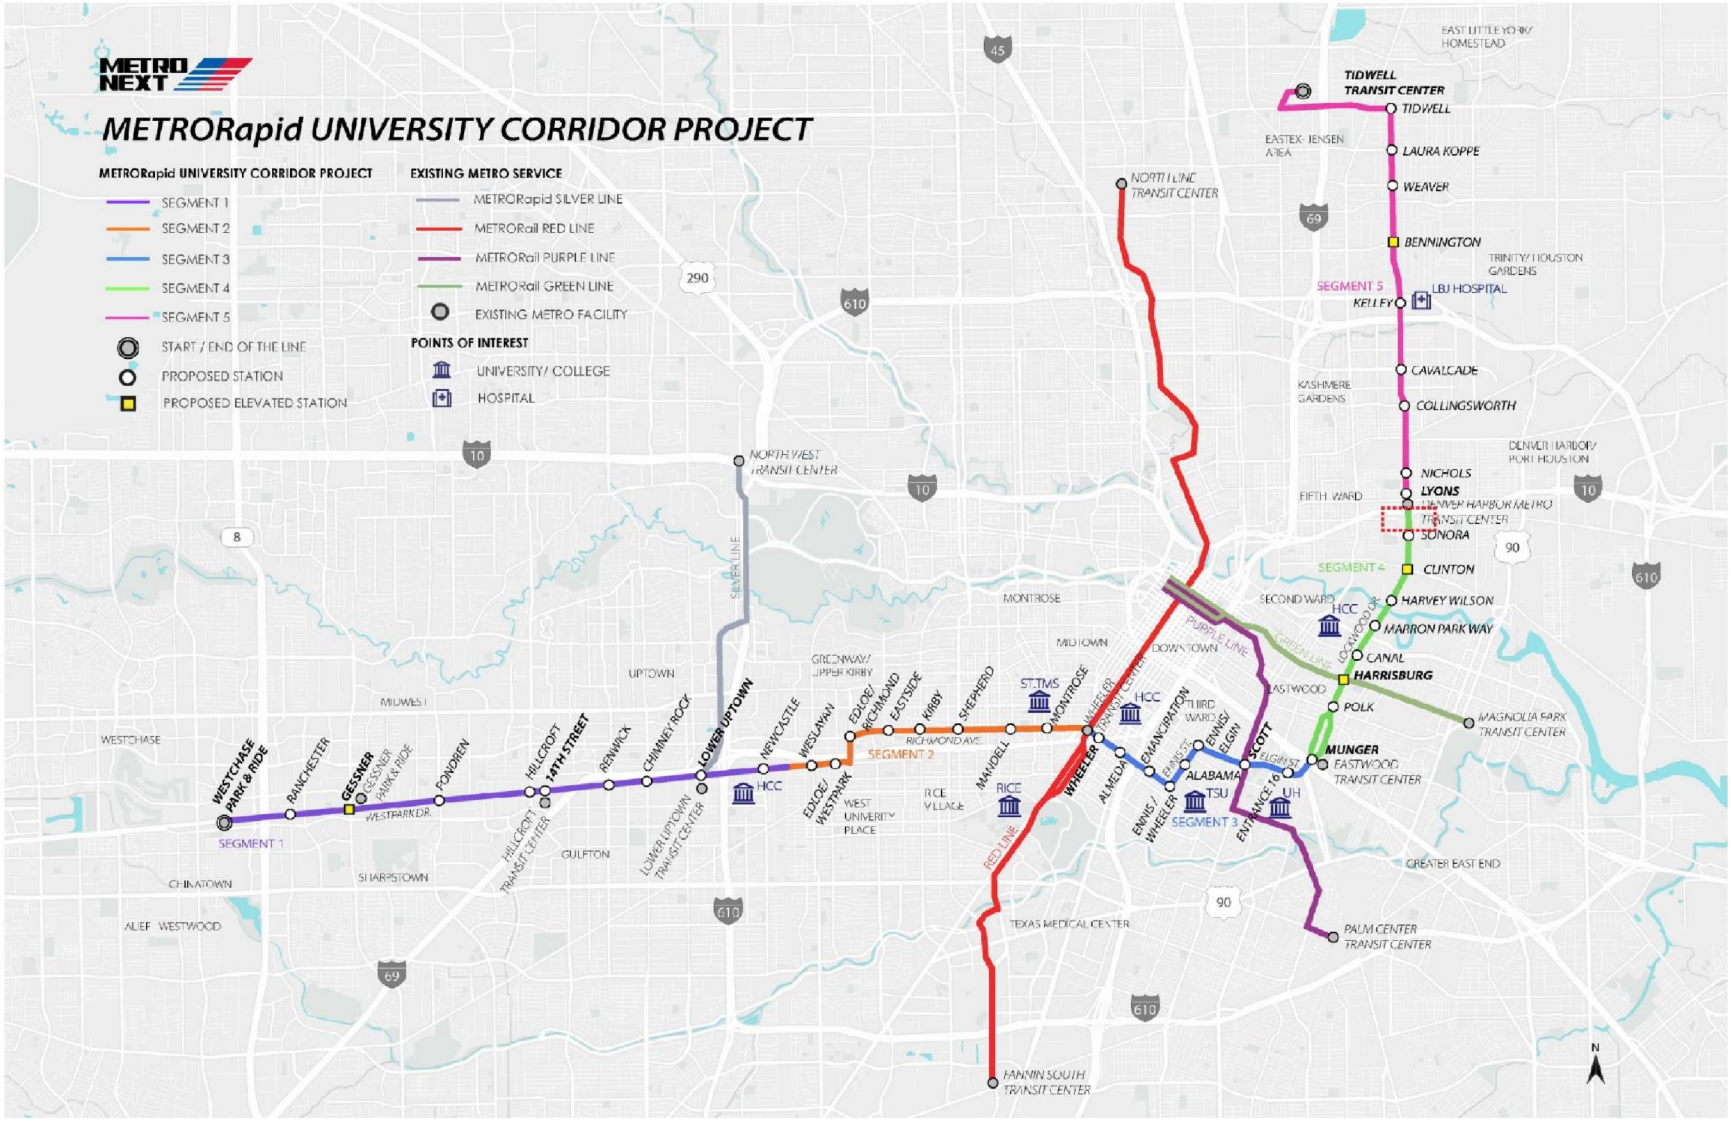
- Contractor—The Contractor is responsible for managing and/or overseeing archaeological studies associated with pre-construction and construction activities of the Project, as well as NEPA compliance. The Archaeological Firm will be a sub-consultant to the Contractor. METRO will initiate a procurement to hire a contractor in 2024.
- Archaeological Firm—Responsibilities include coordination of planned archaeological work, as well as conducting all archaeological work in compliance with standards and guidelines within the AMWP. Duties will include draft scopes of work, obtaining the necessary antiquities permits, producing reports and documentation of the findings of the archaeological work to be read and reviewed by the Contractor, FTA, METRO, and the SHPO, and to provide guidance and advice to the Contractor, FTA, and METRO regarding best practices and standards for all matters associated with the archaeological work. The selected archaeological firm will work closely with SHPO throughout the Project.
- City of Houston—As the landowner of the abandoned portion of the Evergreen Negro Cemetery, the City of Houston will serve as a consulting party in all negotiations between the Project sponsors and the regulatory agencies and will have the authority to propose, alter, or dismiss any aspect of the proposed mitigation plan that affects their property.
- Project RESPECT (Nonprofit Cemetery Management Organization)—Authorized by the Texas HSC to serve as the cemetery manager, this organization will serve as a consulting party in all negotiations between the project sponsors and the regulatory agencies and will have authority to adopt and enforce rules concerning the use, care, control, management, restriction, and protection of the cemetery.

4 Project Description

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate battery electric vehicles in dedicated, METRO-owned right of way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 4-1. Figure 4-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.

The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other METRORail, METRORapid, and local bus services. Some stations would be incorporated into existing METRO



facilities. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

Project engineers expect the average depth of impacts to be between zero and five feet (0.0–1.5 meters), although much of the Project would be constructed at or above the existing ground surface. The maximum depths of impacts would be up to or beyond 80 feet (24.4 meters) where bridge piers and foundations would be built. Proposed stations would typically be constructed at or above the existing grade.

Table 4-1: University Corridor Segments

Segment	From	To
1	Westchase Park & Ride	Westpark Dr at Union Pacific Railroad (UPRR) tracks east of Newcastle Dr
2	Westpark Dr at UPRR tracks east of Newcastle Dr	Richmond Ave at Main St (Wheeler Transit Center)
3	Richmond Ave at Main St (Wheeler Transit Center)	Elgin St at I-45 (Eastwood Transit Center)
4	Elgin St at I-45 (Eastwood Transit Center)	Lockwood Dr at I-10 (Fifth Ward/Denver Harbor Transit Center)
5	Lockwood Dr at I-10 (Fifth Ward/Denver Harbor Transit Center)	Tidwell Transit Center

Figure 4-1: University Corridor Proposed BRT Alignment

Note: Site 41HR1270 (Evergreen Negro Cemetery) is located at the northern edge of Segment 4 (in green) between Lyons and Sonora Stations

5 Archaeological Survey Investigations

[redacted]

Prior to the expansion, the burials within the road ROW and the median were exhumed and reinterred elsewhere. Unfortunately, the records of the exhumation and reinterment have not been located. Archaeological investigations were conducted to determine if burials had been overlooked during the reburial efforts. Trench scraping to locate potential unmarked burials and an archival review of historical impacts to the cemetery were conducted. Texas Antiquities Permit 30784 was issued for the work, with Mindy Bonine serving as Principal Investigator (METRONext 2023).

Fieldwork was conducted December 5–9 and 14–16, 2022. Archaeologists excavated 20 north-south-oriented trench scrapes throughout [redacted] system to the west. Representatives from Project RESPECT participated in a site visit during fieldwork. The investigations identified 33 localities that contain evidence of a burial. These localities included skeletal remains, burial container wood, hardware, or personal items associated with a grave. Of these, three localities contained sufficient skeletal material to be considered "probably intact" burials and one locality that contained a "partial" burial (**Figure 5-3**). These four localities were left in place at the conclusion of fieldwork. The entire survey area was given the archaeological site trinomial 41HR1270. Analysis of burial container hardware determined that the burials were conducted from about 1890 to the 1950s.

A historical map review and archival research was conducted in January and February 2023. The research focused on the installation and subsequent expansion of Lockwood Drive through the Evergreen Negro Cemetery, as well as the removal and reinterment of the human remains ca. 1960. Unfortunately, primary source material concerning the disinterment was not located, and only secondary source material was used in the cemetery's narrative history. According to the map review, Lockwood Drive bisected the cemetery sometime between 1929 and 1939. Afterwards, plans for the Lockwood Drive expansion appeared to correlate with the anticipated construction of I-10 to the north of the cemetery. These plans were in place by 1955. The dates when the disinterment and road construction took place appeared to occur on either side of 1960 (from about 1957 to 1963). No complete formal cemetery plat was found in the archival search, nor was a historical list of interments located. A listing of the individuals buried at the cemetery was compiled though a survey of remaining burial markers and a search of Harris County death certificates. It is unknown if any of these individuals were buried within the APE.

Figure 5-1: APE for the University BRT Line (in green and pink) Near the Evergreen Negro Cemetery on a USGS Topographic Map

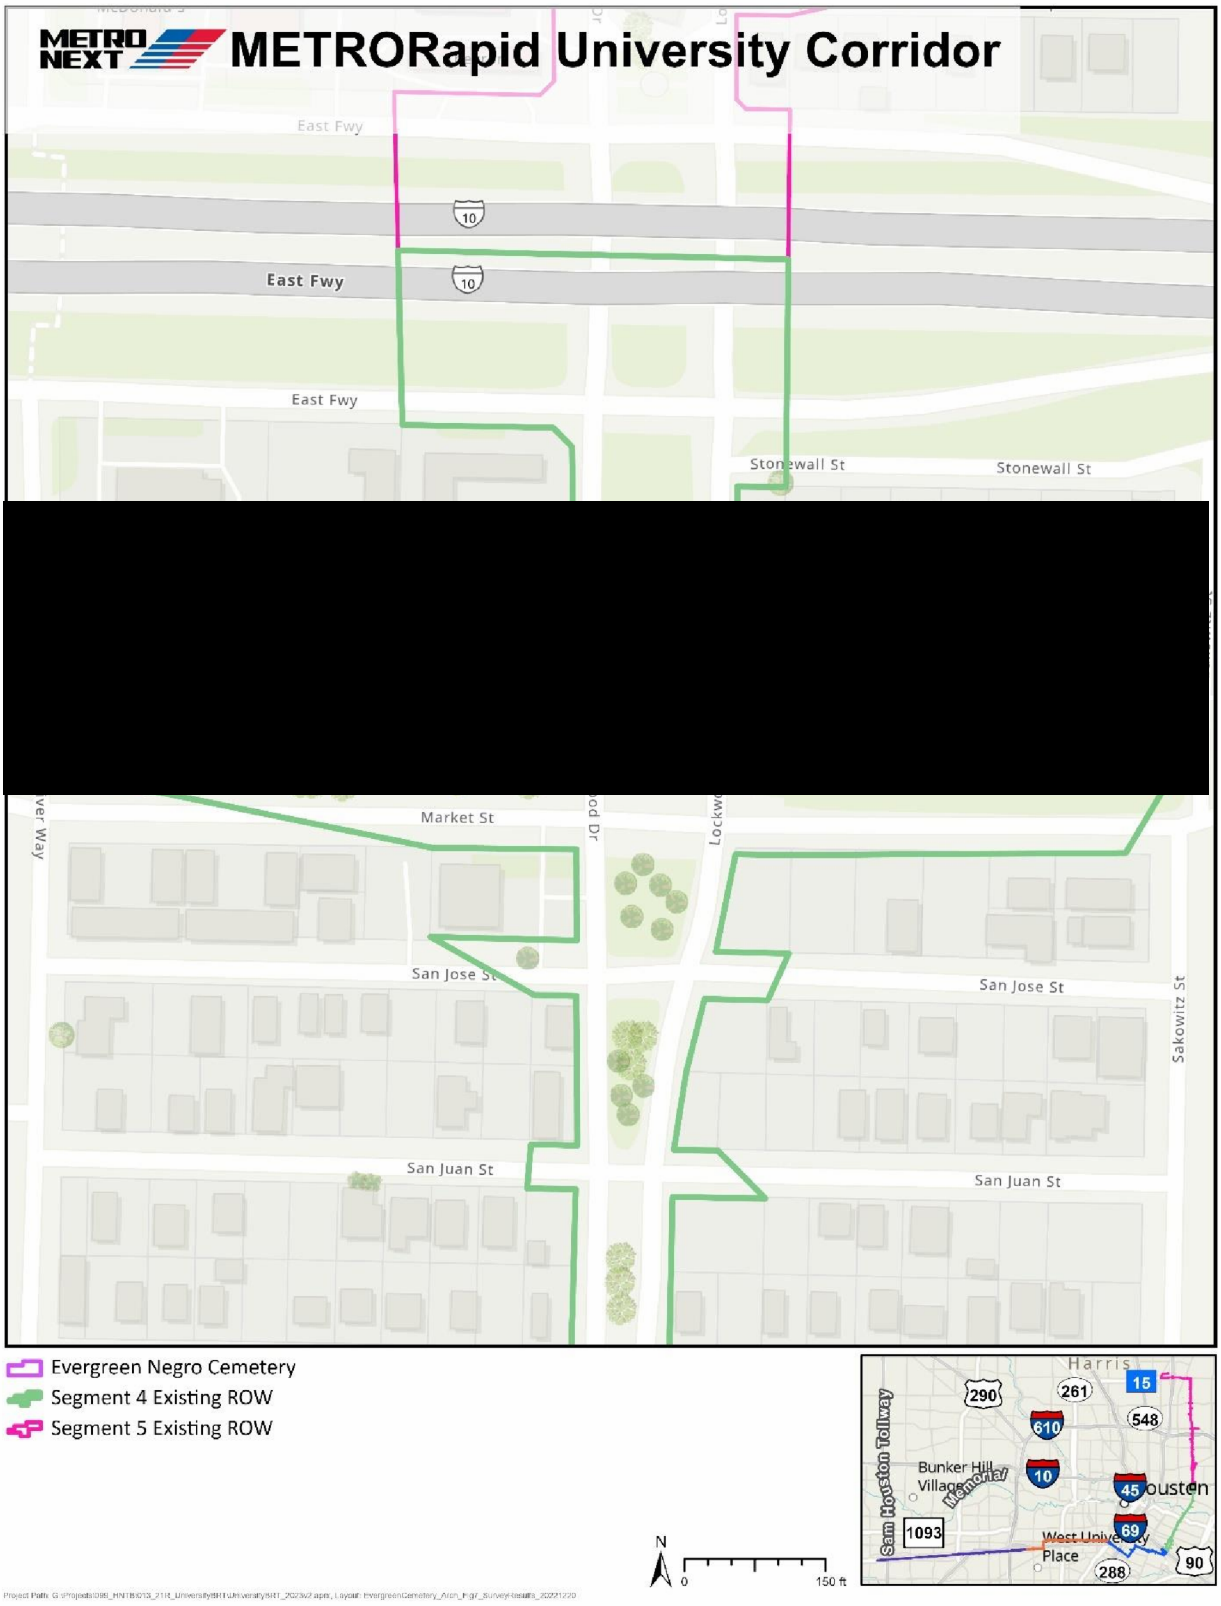


Figure 5-2: APE for the University BRT Line (in green and pink) Near the Evergreen Negro Cemetery on a Current Aerial Photograph

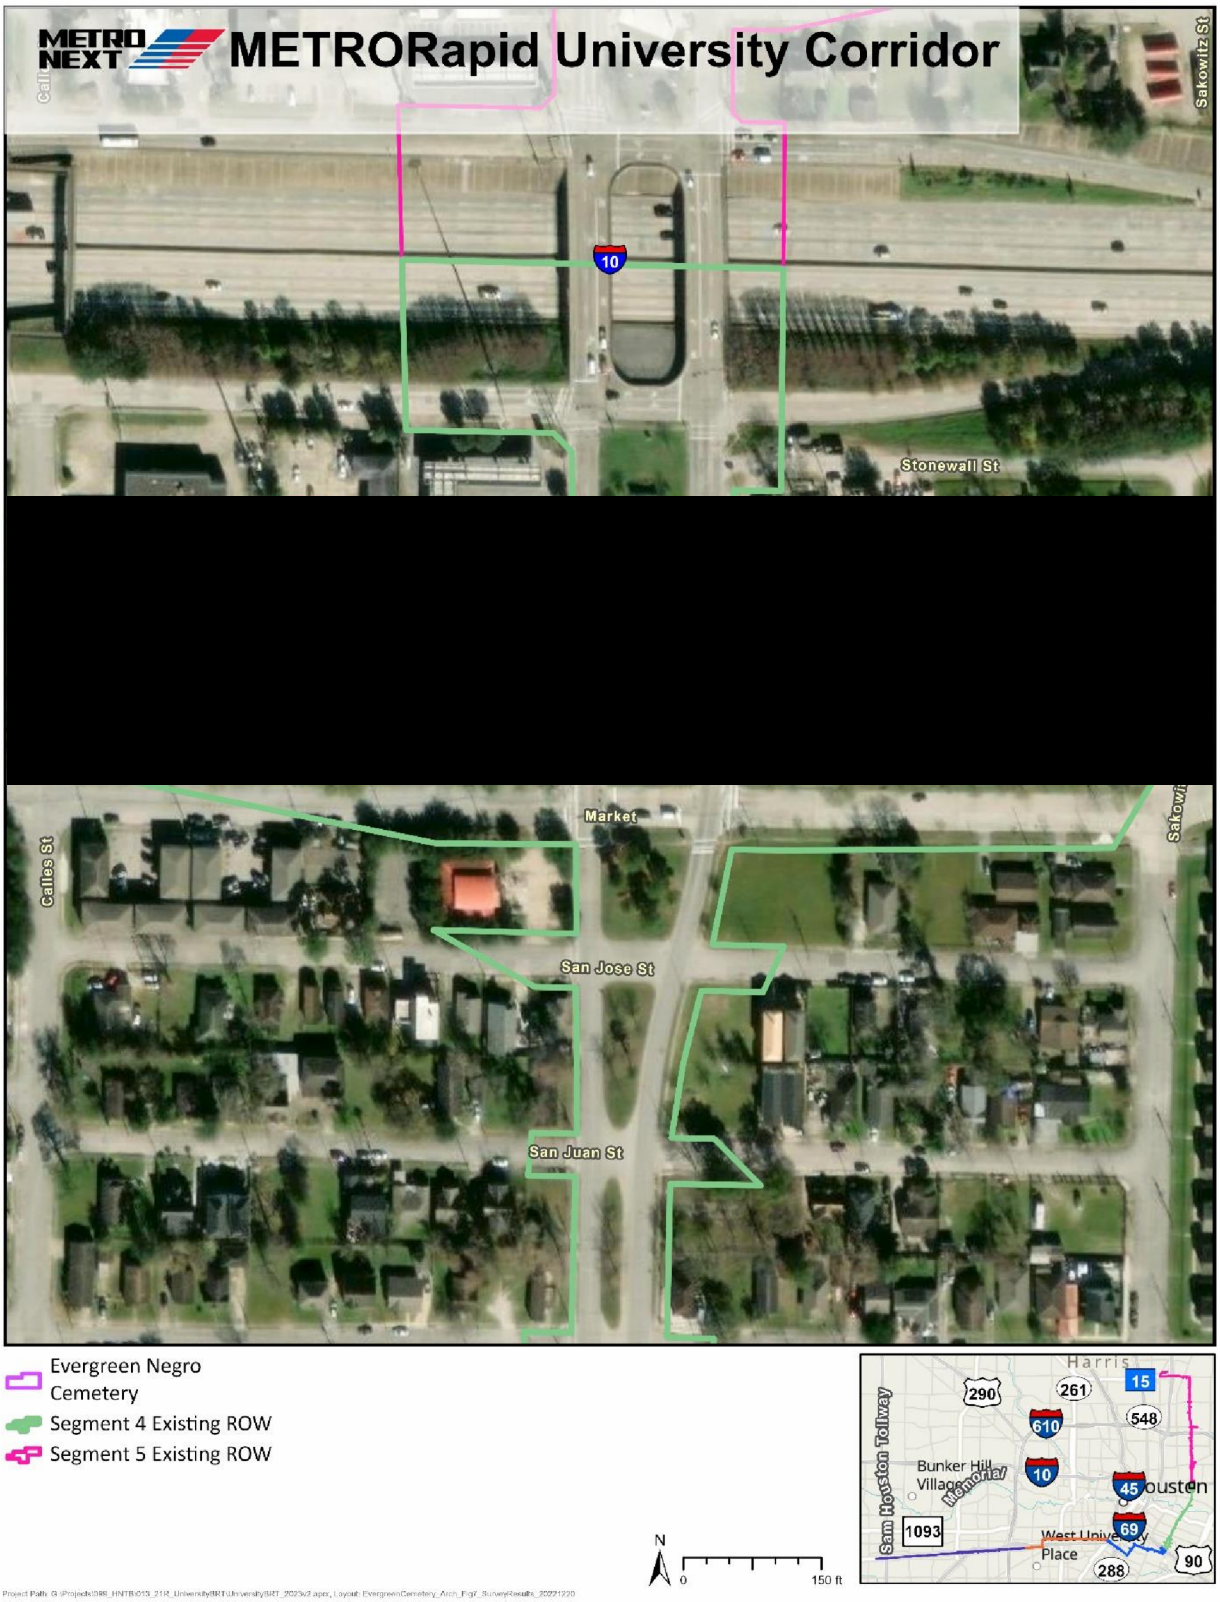

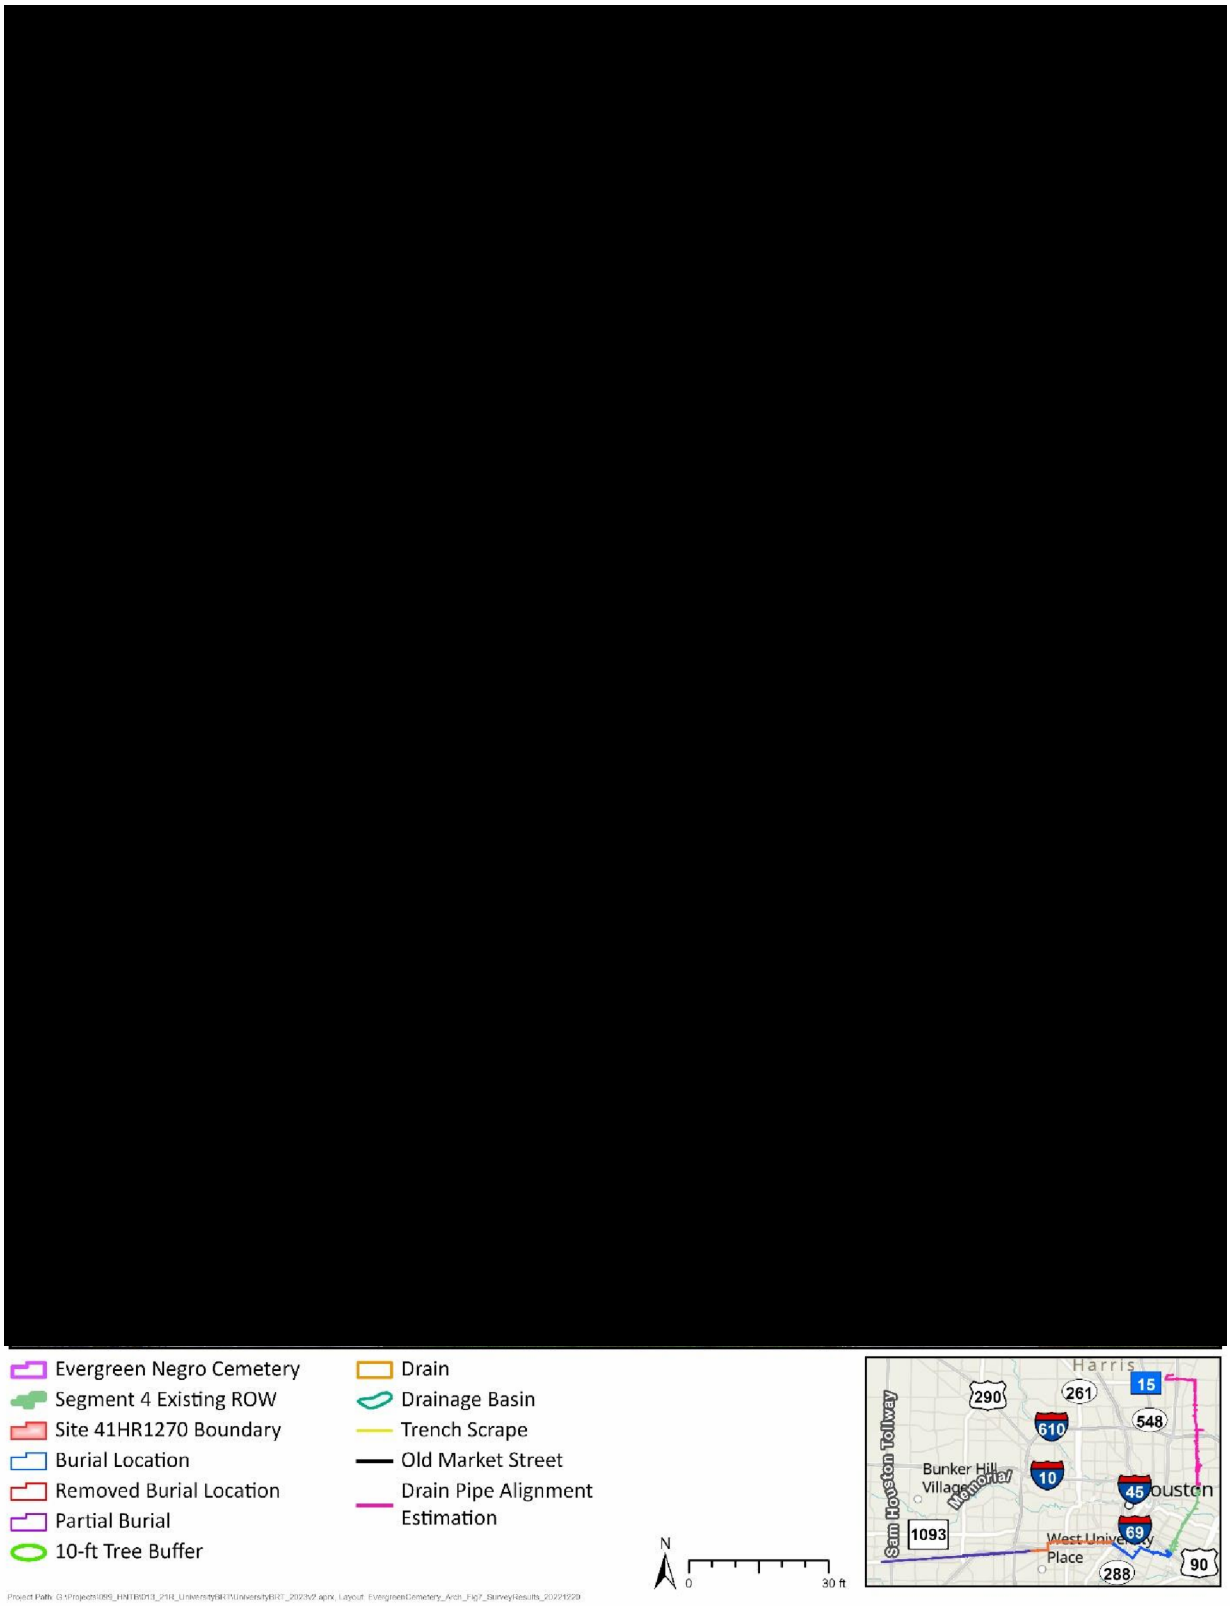

Figure 5-3: Results of the Archaeological Survey Investigations

6 Outcome of Investigations

The archaeological investigations documented and confirmed human interments [redacted] that are associated with the Evergreen Negro Cemetery. Human skeletal remains, burial containers, and associated burial goods were all located in subsurface contexts in the APE. Thus, [redacted], are part of an abandoned cemetery, as defined by the Texas HSC (§711.001) and the ACT (§25.1). In addition, the abandoned portion of the cemetery falls within the definition of an archaeological site and given the trinomial 41HR1270. The archaeological site has been recommended as eligible for designation as a SAL (see METRONext 2023) and the Project will affect the resource. As improvements to the land cannot occur within a cemetery boundary (HSC §711.010), the City of Houston has elected to petition the district court for a removal of the cemetery designation for the area. This action will involve the removal of the identified remains [redacted] and subsequent reinternment elsewhere at the Evergreen Negro Cemetery. Mitigation measures will be required to provide a respectful and permanent burial place for the individuals found in the APE and secure important information about African American burial practices in the late nineteenth and early twentieth centuries.

A "Notice of Existence of Abandoned or Unknown Cemetery" form was completed for this portion of the Evergreen Negro Cemetery and submitted to the Harris County Clerk on February 10, 2023. This form identifies the location and disposition of the abandoned section of the cemetery. The record was officially filed on February 15, 2023.

7 Archaeology Mitigation Work Plan

The following AMWP is designed to mitigate the effects to the abandoned portion of the Evergreen Negro Cemetery. Once approved, this AMWP will serve as the scope of work (SOW) that will be submitted along with a Texas Antiquities Permit application to the SHPO. The AMWP includes eight phases: 1) application for and issuing of a new Texas Antiquities Permit, 2) 100 percent investigation of the proposed new bus lanes within the ROW, 3) burial exhumation, 4) analysis of recovered material including human skeletal remains and associated burial artifacts, 5) additional archival investigations to determine the possible identity of the individuals removed from the median ca. 1960, 6) production of a full report of findings, 7) reinternment of identified burials at the Evergreen Negro Cemetery, and 8) curation of paperwork associated with the project.

7.1 Texas Antiquities Permit Application

Because the project will take place on land owned by a political subdivision of the State of Texas: City of Houston, and it is subject to the ACT, all fieldwork must be conducted under a Texas Antiquities Permit issued through the THC. The Archaeological Firm will prepare an Antiquities Permit application package that includes a permit application form and a proposed scope of work for the field investigations. The Archaeological Firm will provide draft/revised permit application packages to the Contractor, FTA, and METRO, based on the provisions of this AMWP. METRO and the City of Houston will be signatories on the permit application form as Project Sponsor and Landowner (respectively). Once the approved permit application package has the needed signatures, the Archaeological Firm will send the materials to the THC for review and presumed permit issuance.

7.2 100 Percent Survey

Archaeologists from the Archaeological Firm, experienced with bioarchaeology and/or human osteology and the identification, documentation, and treatment of human remains, will conduct an archaeological survey of the proposed bus lanes [redacted] This survey will remove 100 percent of the soil from the proposed bus lanes as defined by the 60 percent design plans. The investigations will be conducted with a backhoe or mini excavator to identify potential unmarked graves, including burial containers, human remains, and grave goods. Any evidence of a grave will be fully explored to determine the extent and content of the interment. The excavations will continue to the depth at which the investigators can determine that no burials are present, generally 80-120 centimeters below surface (cmbs). All objects associated with a burial will be documented, assessed, and collected. Collection will conform to the following rules: 1) burials that are found to contain non-trivial quantities of human remains will be treated as partly intact or intact burials—any such graves will be investigated with the same level of effort as outlined in Section 7.3 below, and 2) burial objects (with the exception of coffin/casket wood) found outside of an intact burial will be collected separately—any such burial objects will be assessed and possibly linked with the material previously collected. All collected burial objects will be reinterred along with the previously recovered material as outlined in Section 7.7 below.

This 100 percent survey may necessitate removal of existing trees or damage to the root systems of existing trees. In addition, this survey may also be conducted within areas that contain underground utilities. METRO will coordinate with the City of Houston departments responsible for the maintenance of heritage trees and underground utilities to receive appropriate approval for potential impacts to these resources from the survey team. Known underground utilities will be left in place, but the soil surrounding any utilities in the proposed bus lanes may be removed in the search for unmarked graves. Root systems and trees will be removed entirely within the investigation area.

7.3 Burial Relocation and Exhumation

Archaeologists from the Archaeological Firm, experienced with bioarchaeology and/or human osteology and the identification, documentation, and treatment of human remains, will travel to the project area to document the predominantly intact (n=3) and partly intact (n=1) burials uncovered during survey investigations. Any partly intact or intact burial uncovered in the 100 percent survey will also be documented using the same methods. All work will adhere to the Protocol for Protection and Treatment of Human Burial Remains (in Section 8 below). It is important to note that temporary privacy construction fencing with opaque sheeting will surround all field investigations for the duration of fieldwork until the trench and any associated excavations are backfilled. Temporary fencing will not include any below-ground impacts and will rest on grade. Any contact with the public and news media will be coordinated with the Public Information Officer representing METRO. The Archaeological Firm will record their field activities through notes, photographs, and with hand-held and/or GNSS/RTK GPS units.

The topsoil above the recorded burials will be removed via mechanical excavation. The mechanical removal of soil will terminate approximately 20 centimeters (cm) above the known burial depths, and the remaining material will be removed by hand. Once the burial container or any other burial

materials or human remains are revealed, the four burials will be archeologically investigated to fully delineate their location, maximum extent, and their composition, including biological profile estimation. All human remains and funerary objects shall be carefully delineated using manual archaeological techniques and shall be recorded in the field and laboratory in accordance with professional standards for archaeological documentation and shall include photographs, drawings, and notes. The human remains will be documented with sketch maps in plan view, and their vertical and horizontal position will be captured with a GNSS/RTK GPS unit. Location data will be tied into permanent datum points. Archaeologists will use soft brushes and tools to expose any skeletal elements for appropriate documentation.

All *in situ* burial-related materials that the archaeologists encounter during field investigations will be field-recorded in a respectful manner and to the extent necessary for sufficient field-level documentation. Analysis of remains will include a biological profile estimation, skeletal and burial pit measurements, burial arrangements, and macroscopic examination of the skeletal elements. Notes will be taken to document identifying attributes of each burial on specifically designed field forms. Photography of encountered burials will be permitted to assist in post-field documentation only. The information from photographic data will be converted to hand-drawn depictions. At no time will photographs of the human remains be presented in any published material. Digital files and prints will be destroyed after they have been converted to hand-drawn depictions.

The Archaeological Firm will water screen 100 percent of the backdirt from the hand excavations to locate artifacts and evidence of human burials (e.g., wood fragments, nails, bone, clothing, etc.). The soil within a given burial will be screened through 1/8-inch hardware mesh. Screening stations will be set up near the trench backdirt and the hand excavated soil will be manually loaded onto the screens for processing. Any finds associated with burials, including bone, coffin wood, coffin hardware, and associated artifacts, will be air dried on trays and collected in muslin bags that will be marked with their associated segment. At the discretion of the Principal Investigator, soil from the torso will be collected for flotation in the laboratory.

Once recorded, each burial's contents will be given provenience codes, spatially identified on maps, and removed in an order that will best preserve the fragile material. Unless the Principal Investigator determines it is necessary for subsequent skeletal analysis, no in-field preservation techniques (plaster casts, resin casts, or wholesale removal of dirt blocks) will be conducted. The skeletal remains will be separated from the more robust burial container hardware and grave goods to protect the integrity of the bone. The burial assemblage will be stored in muslin bags in a dedicated hard-side bin. The Archaeological Firm will temporarily store all the recovered material in a temperature- and humidity-controlled and secure location. Only the Principal Investigator and Senior Analyst will have direct access to the material.

Once removed, all burial locations will be mechanically backfilled, and the median will be returned to its pre-field state as closely as possible. The locations of the burials will not be marked in any way on the ground surface.

7.4 Analysis of Recovered Material

Archaeologists from the Archaeological Firm, who are specialists in human osteology, will conduct the analysis of the human remains recovered from both the survey investigations, the burial exhumation, and the 100 percent survey described above. The analysis will meet or exceed professional standards for osteological analysis in accordance with Texas Administrative Code, Chapter 22.5 and Section 711.0105 (a, b, and c) of the Texas HSC and following the guidelines set forth by Buikstra and Ubelaker (1994). All remains will be inspected with a boom microscope under at least 10x magnification. If preservation is sufficient for analysis, the osteological analysis will document the following:

- Presence and preservation of skeletal element, including proximal, medial, and distal components,
- Sex estimation,
- Age estimation,
- Stature estimation,
- Ancestry estimation,
- Cranial and post cranial measurements,
- Non-metric traits,
- Dental inventory, morphology, pathology, cultural modifications, and measurements,
- Pathology, spinal osteophytosis, degenerative joint disease,
- Evidence of trauma, and
- Entheseal changes.

These metrics will be used to determine the age, sex, stature, ancestry, trauma/disease, potential occupation, and possible diet of the individuals. The remains will be photographed for documentation and curation purposes. Radiographs and/or CT scans will be taken if needed for documentation and differential diagnosis of pathology, trauma, diet, etc.

The Senior Osteological Analyst with the Archaeological Firm will select skeletal samples with the greatest potential to return a viable ancient DNA (aDNA) sequence. Samples will be submitted, extracted, and tested for the presence of aDNA. One round of sequencing may be required to insure sufficient aDNA is present for use in comparative analysis. A reputable DNA laboratory will be contracted to process the samples. The analysis will include a classification of age, sex, ancestry, and disease characteristics. Once obtained, the aDNA sequence will be curated with the field documentation and provided to Project RESPECT (or other designated nonprofit cemetery management organization) for their use. A program of comparative analysis with living individuals will not be included in this AMWP.

Any soil collected from the torso area will be sent through floatation machine to collect light fraction and heavy fraction organic material. These samples will be analyzed for small bone fragments, surviving soft tissue, and potential fetal material. In addition, evidence of parasites will be investigated, which will provide a clue to overall body health. In addition to the osteological analysis, the bioarchaeologist shall collect data and make observations pertaining to historical mortuary practices.

The analysis of the associated burial container hardware and any grave goods will be conducted by a senior archaeologist with experience in historical cemetery archaeology. Burial container hardware will be identified as to type, material, design, period of manufacture, and possible cost through comparison with coffin and casket trade catalogs and other archaeological assemblages. Burial container wood species, which may indicate the price-ranking of the container, will be identified by a macrobotanical expert analyst. Associated burial goods will be researched as to type, material, design, period of manufacture, and association with known African American burial practices in the late nineteenth to early twentieth century.

7.5 Archival Research

At this time, the burials are considered unmarked. No evidence of above-ground monuments or identification markers have been found around the graves. However, it is possible that the identity of the individual may be revealed through the process of delineating the burial and subsequent skeletal analysis. If such an identification is possible, the Archaeological Firm staff will conduct archival and genealogical research to find descendants or family members of the individual. If found, these individuals will be contacted by either the Archaeological Firm or the nonprofit cemetery management organization (Project RESPECT) for their input as to the eventual disposition of the human remains along with the City and State agencies, per HSC regulations (Sec. 711.002).

In addition, the survey investigations revealed additional avenues of research to determine the possible family names of those interred at the Evergreen Negro Cemetery but were removed prior to the cemetery expansion. Specifically, preliminary deed research identified the names of some of the families that signed over their claim to plots in the median, but additional property records research is necessary to follow the chain of title. In addition, descriptions of the Evergreen Negro Cemetery include references to Ordinance #60-1760 of the City's Real Estate Development notes, and the identity of the funeral home (Johnson Funeral Home) that received the city contract to do the exhumation (Beverly 2005). An archival researcher will conduct the property records search of the names identified, attempt to locate the ordinance in question, and contact the funeral home to determine if they have retained any records of the exhumation. The results of this research will be included in the reporting phase.

7.6 Report of Findings

Once all earth-disturbing activities are complete and backfilled, and the analysis of the skeletal material and associated artifacts are completed, the Archaeological Firm will prepare a full report to document the results following the State's published reporting standards. The draft report will be reviewed and approved by the FTA, METRO, the City of Houston, and Project RESPECT. The approved report will then be sent in electronic format to the SHPO for review and regulatory approval. Upon report acceptance, the Archaeological Firm will send electronic copies of the final report to the SHPO following permitting requirements.

7.7 Reinterment of Burial Material

After the Archaeological Firm has fully documented all exhumed burials and analyzed the skeletal remains and associated artifacts, they will collect all the burial material from secure, temporary storage for reburial at the Evergreen Negro Cemetery. The reburial process will be coordinated with

Project RESPECT, the City of Houston, and METRO, to ensure a meaningful and respectful treatment of the remains. Burial boxes with an approved design will be constructed for each burial, and all reburials will take place in one ceremony. The skeletal material, burial container hardware, wood fragments, and grave goods for each grave will be combined in the same burial box. New graves will be excavated mechanically and backfilled after the ceremony. Burial markers will be placed on the ground surface at the new grave location(s).

7.8 Curation

The Archaeological Firm will curate all field photographs, field documents, analysis sheets, illustrations, and the final report at Texas State University's Center for Archaeological Studies (CAS) following the requirements of the issued antiquities permit. All photographs of human remains will be deleted from the collection before curation. No artifacts or skeletal material will be curated, all such material will be reburied as part of the reburial phase of the project.

8 Protocol for Protection and Treatment of Human Burial Remains

Historical human burials and cemeteries shall be treated according to provisions of the Texas HSC (Title 8, Subchapter C, Chapter 711) in addition to the requirements of the ACT. These laws require that any and all exhumation, handling, treatment, and reburial of human burial remains be done with dignity and respect for the individual.

All fully exposed human remains will immediately be covered with light-weight plastic sheeting and reburied under a shallow blanket of soil to prevent unnecessary exposure until fieldwork is completed. Locked temporary privacy construction fencing with opaque sheeting will be erected around the project area to secure the site. The City of Houston and METRO will ensure that the discovery site is secured and protected from damage or vandalism 24 hours per day, every day until the burial remains have been disinterred and secured in locked storage. Individuals or groups not directly involved with the archaeological investigations should not be allowed to view, handle, or photograph human remains, unless authorized by the SHPO, in consultation with the City of Houston and Project RESPECT.

Human remains not associated with the known four burials marked for burial relocation and exhumation may be identified during fieldwork. If confirmed human remains or funerary objects are discovered *outside of the grave delineation area*, all ground-disturbing work at that location will stop and the SHPO will be notified. Upon this notification, the Principal Investigator will notify appropriate METRO and City of Houston officials of the discovery and request assistance in developing a plan for the appropriate and respectful identification, analysis, and treatment of these human remains.

1 Introduction

The Federal Transit Administration (FTA) and the METROpolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in Harris County, Texas in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

This report summarizes documentation that METRO prepared to support determinations required to comply with the provisions of Section 4(f) of the Department of Transportation Act of 1966 (codified at 23 United States Code [USC] 138 and 49 USC 303, with implementing regulations at 23 Code of Federal Regulations [CFR] 774, and generally referred to as "Section 4(f)"); and Chapter 26 of the Texas Parks and Wildlife Code.

1.1 Section 4(f)

This Section 4(f) evaluation has been prepared in accordance with Federal Highway Administration (FHWA)/FTA regulations for Section 4(f) (23 CFR Part 774), FTA Standard Operating Procedure #18 for Section 4(f) Evaluations (2016), and the Section 4(f) Policy Paper (FHWA, 2012 adopted by FTA).

1.1.1 What is Section 4(f)?

Section 4(f) is a federal law that protects the following properties of national, state, or local significance:

- Parks and recreational areas of national, state, or local significance that are both publicly owned and open to the public,
- publicly owned wildlife and waterfowl refuges of national, state, or local significance that are open to the public to the extent that public access does not interfere with the primary purpose of the refuge, and,
- historic sites of national, state, or local significance in public or private ownership regardless of whether they are open to the public. See 23 U.S.C. § 138(a) and 49 U.S.C. § 303(a). If parks, recreational areas, or refuges are determined not to be properties of national, state, or local significance by the Official(s) with Jurisdiction (OWJ), and after review by FTA for reasonableness, then Section 4(f) does not apply. Historic sites listed on, or eligible for listing on, the National Register of Historic Places (NRHP) are significant properties for Section 4(f) purposes.

Section 4(f) specifies that FTA may only approve a transportation project that requires the use land from applicable properties as described above if:

- There is no prudent and feasible alternative to the use of that land and all possible planning to minimize harm due to the use has been included as part of the proposed project, or

- The FTA determines that the use of the property, including any measure(s) to minimize harm, will have a *de minimis* impact on the property, as defined in 23 CFR 774.17.

1.1.2 Section 4(f) Use Definitions

As defined in 23 CFR 774.17, the "use" of a protected Section 4(f) property occurs when any of the following conditions are met:

Permanent Use – A permanent use of a Section 4(f) property occurs when property is permanently incorporated into a proposed transportation project. This may occur as a result of partial or full acquisition of a fee simple interest, permanent easement, or temporary easement that exceeds regulatory limits.

Temporary Use – A temporary use of a Section 4(f) property occurs when there is a temporary use of property that is considered adverse in terms of the preservation purposes of the Section 4(f) statute.

Constructive Use – A constructive use of a Section 4(f) property occurs when a transportation project does not incorporate land from the resource, but the proximity of the project results in impacts so severe that the protected activities, features, or attributes that qualify the resource for protection under Section 4(f) are substantially impaired (23 CFR 774.15).

1.1.3 *De Minimis*

The requirements of Section 4(f) are satisfied with respect to a Section 4(f) resource if it is determined by FTA that a transportation project would have only a "*de minimis* impact" on the Section 4(f) resource. The provision allows avoidance, minimization, mitigation, and enhancement measures to be considered in making the *de minimis* determination. The OWJ over the resource must be notified of the agency's determination. 23 CFR 774.17 defines a *de minimis* impact as follows:

- For parks, recreation areas, and wildlife/waterfowl refuges, a *de minimis* impact is one that would not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f), and the OWJ has concurred with this determination after there has been a chance for public review and comment.
- For historic sites, *de minimis* impact means that FTA has determined, in accordance with 36 CFR 800, that either no historic property is affected by the project, or the project would have "no adverse effect" on the property in question. The OWJ must be notified that FTA intends to make a *de minimis* finding based on their concurrence with the "no adverse effect" determination under 36 CFR 800. This is usually done in the effect determination letter sent to the OWJ for their concurrence.

1.2 Chapter 26 of the Texas Parks and Wildlife Code

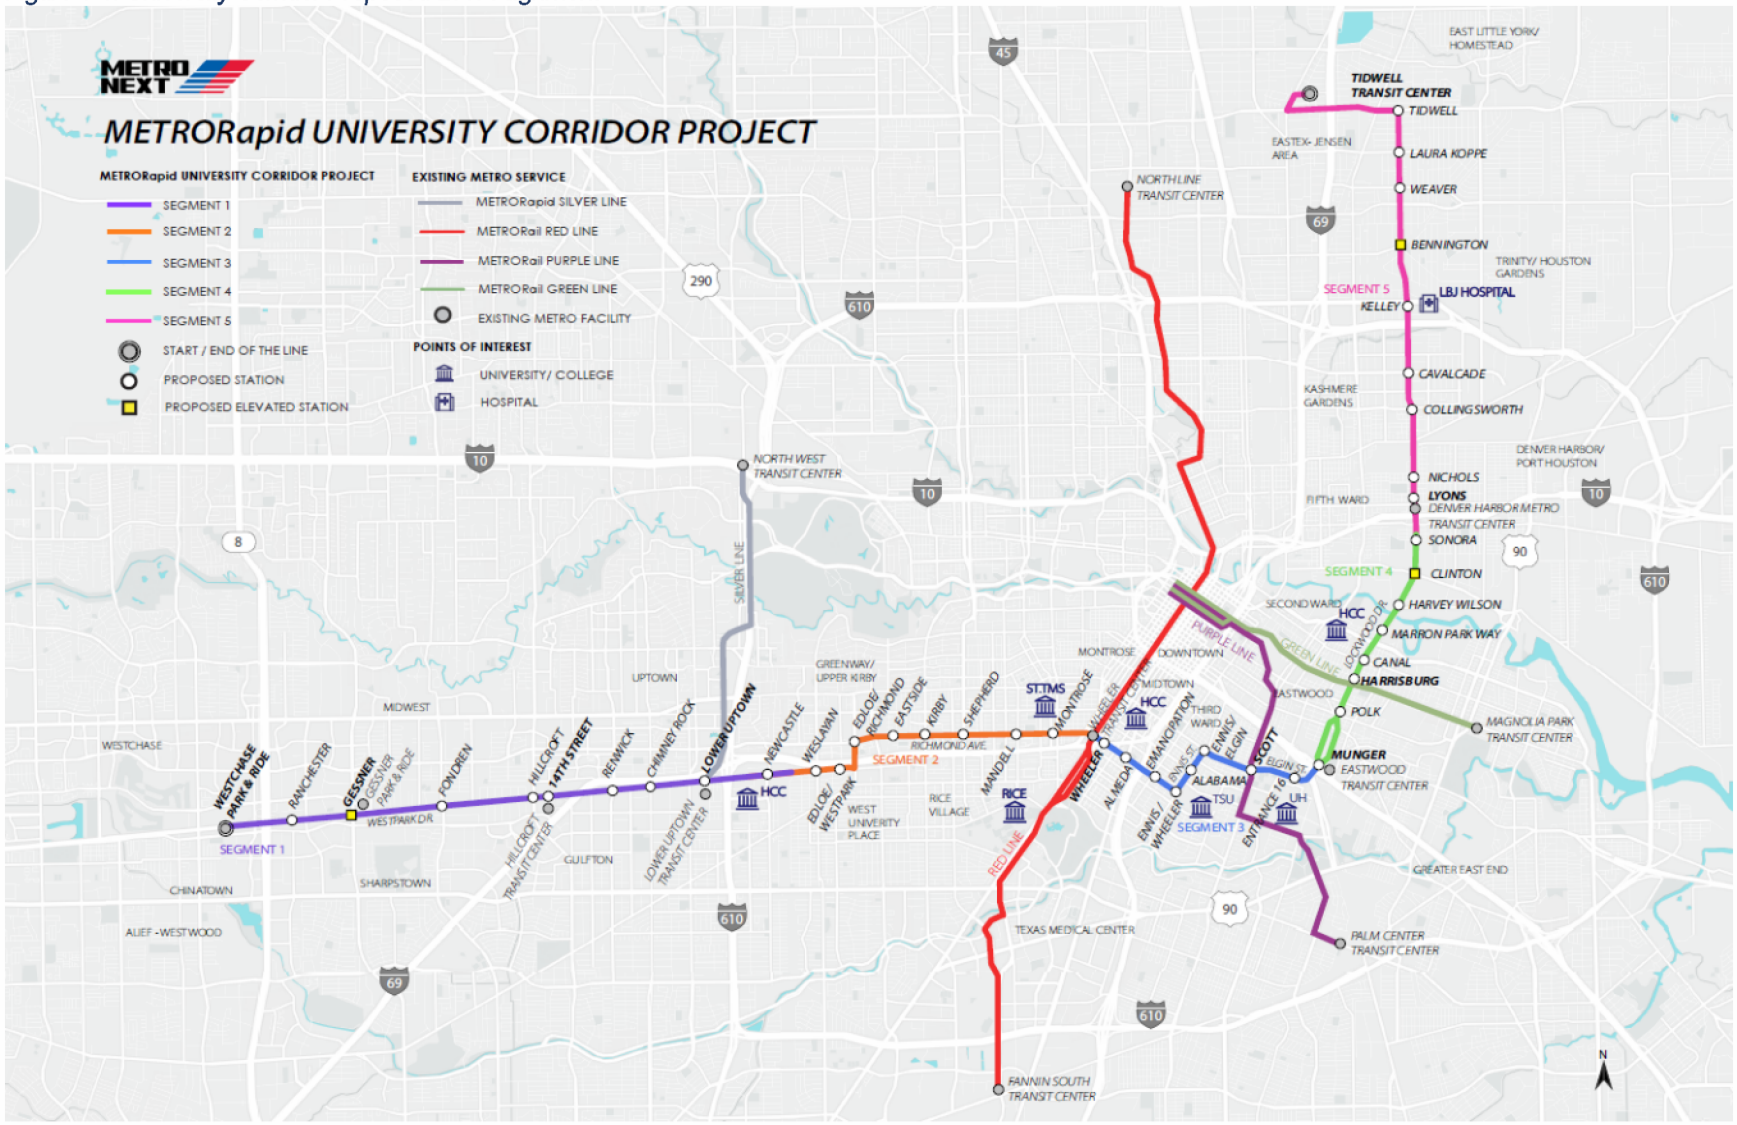
Chapter 26 of the Texas Parks and Wildlife Code limits a municipality's authority to approve programs or projects that require the use or taking of public land previously designated and used as a park or recreation area. Before taking or changing the use of park land or a recreation area, the municipality must first determine that:

(1) there is no feasible and prudent alternative to the use or taking of such land; and,

(2) the program or project includes all reasonable planning to minimize harm to the land, as a park, recreation area, scientific area, wildlife refuge, or historic site, resulting from the use or taking.

When a use is determined, a public hearing with a 30-day prior notification is required. Once comments are received the OWJ makes a determination under Chapter 26 that the requirements of the statute have been fulfilled.

1.3 Project Description



The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston (COH). The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in Table **1-1**. Figure 1-1 shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.

Table 1-1: University Corridor Segments

Segment	Alignment	From	To
1A	Westpark	Westchase Park & Ride	West of I-69/US 59 south Frontage Road
1B	Westpark	West of I-69/US 59 south Frontage Road	Westpark Drive and Edloe Street Intersection
2	Edloe, Richmond	Westpark Drive and Edloe Street Intersection	Richmond Avenue, west of Spur 527

4	Lockwood	S Lockwood at I-45 NB (Eastwood Transit Center)	South of I-10 EB Frontage Road
5A	Lockwood	South of I-10 EB Frontage Road	North of Kelley Street
5B	Lockwood, Tidwell, Jensen	North of Kelley Street	Tidwell Transit Center

Figure 1-1: University Corridor Proposed BRT Alignment

Source: METRO 2021

2 Description of Section 4(f) Properties

METRO identified potential Section 4(f) properties within a ½-mile study area throughout the corridor. For protected parks and recreational areas, and wildlife/waterfowl refuges, METRO reviewed City of Houston Parks and Recreation Department (HPARD), Harris County, Houston Parks Board, and the Houston-Galveston Area Council (H-GAC) park inventory geo-database. For historic properties, METRO historians, meeting Secretary of Interior Professional qualifications, identified buildings, structures, objects, sites, or districts listed in or eligible for listing in the NRHP that possess historic significance and integrity per guidelines set by the National Park Service (NPS 1991: 1).

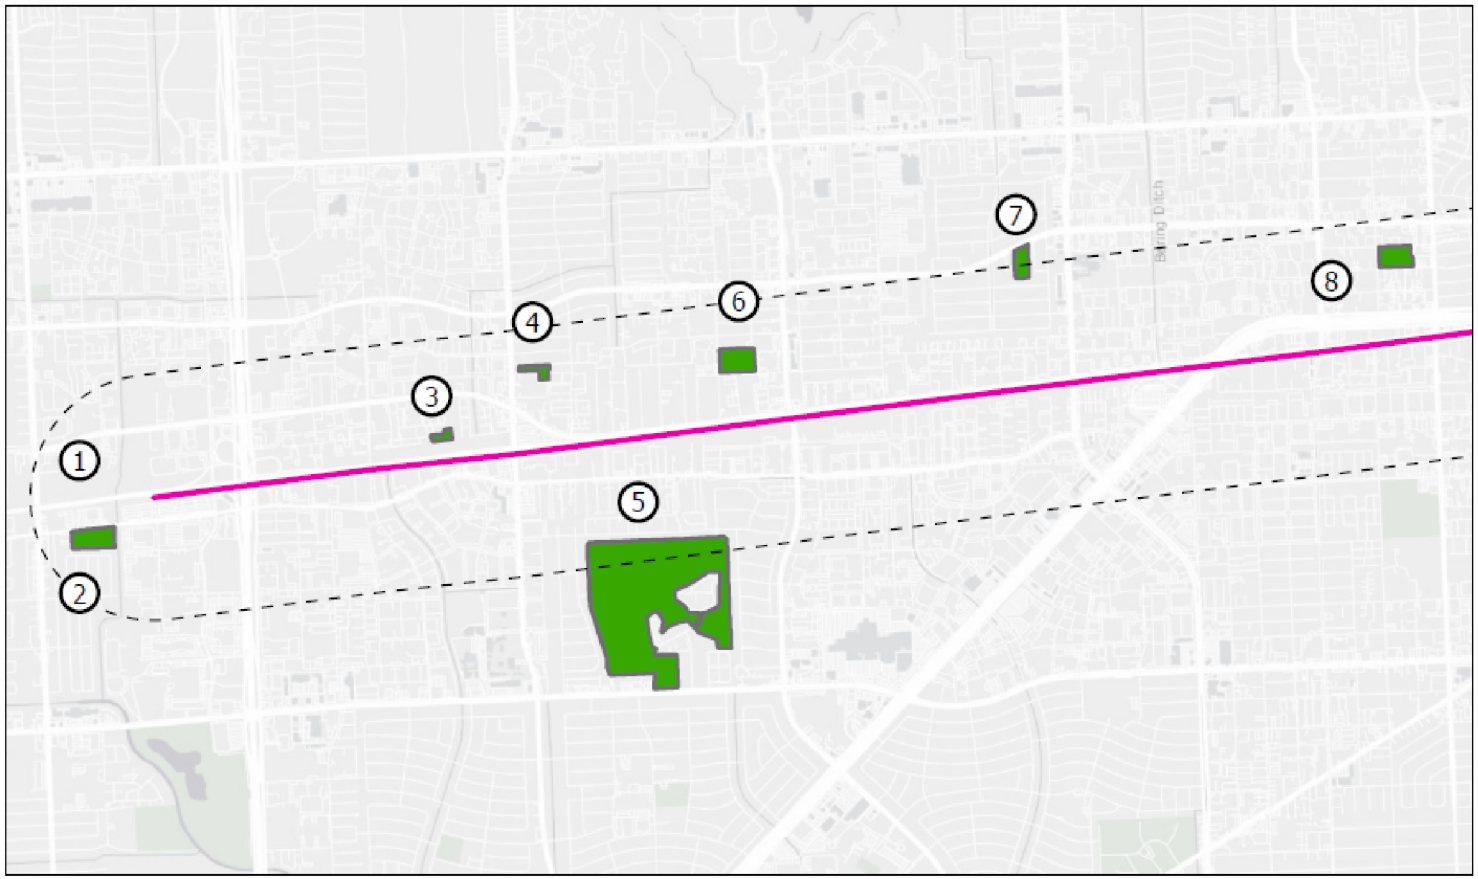
2.1 Consultation with Officials with Jurisdiction

FTA and METRO consulted with the City of Houston Parks & Recreation Department as the OWJ for parks and recreation areas, and the Texas Historical Commission (THC) as the OWJ for historic properties. Coordination with the OWJ included a review of Section 4(f) properties, the project's potential effects and/or proposed "use" of these resources, a review of planned sidewalk and ADA improvements, and conceptual engineering design plans.

2.2 Parks and Recreation Areas

Existing public park and recreational areas within ½-mile of the project alignment are shown in Figures 2-1a to 2-1e and are listed in Appendix A, Table A-1. This study area was used to examine all parks where a permanent, temporary, or constructive use could possibly occur. METRO identified 51 parks and recreation areas, including recreational trails, facilities, and publicly accessible school recreational sites. Their presence and condition were noted during field visits. No wildlife or waterfowl refuges were identified.

Parks eliminated from further evaluation included those that did not meet the definition of a Section 4(f) resource because they were either 1) not open to the general public[1] or 2) not considered of local, state, or national significance. One property, Danny Jackson Family and Dog Park, is not protected by Section 4(f) because the property is land owned by METRO for future transportation use and is leased to Harris County on a temporary basis for the park[2]. A copy of the deed that details the agreement between METRO and Harris County is contained in Appendix B. Another resource, Peggy's Point Plaza Park has been partially fenced off and is not available for use by the public. The HPARD has determined that the park is not a significant[3] park. A copy of correspondence with the HPARD regarding this determination is contained in Appendix B. The FHWA Policy Paper, adopted by FTA November 2012, Section 4(f), Section 3.1, states:



"A publicly owned park, recreational area or wildlife or waterfowl refuge must be a significant resource for Section 4(f) to apply (See 23 CFR 774.11(c) and Question 1A). Resources which meet

the definitions above are presumed to be significant unless the official with jurisdiction over the site concludes that the entire site is not significant."

The City has decided to sell the property. To sell the property, the HPARD must decommission the park so that it is no longer a park. The park is in the process of being decommissioned and, therefore, does not meet the definition of a significant resource and is not a protected Section 4(f) property.[4]

2.3 Historic Properties

FTA and METRO in coordination with the THC determined the area of potential effect (APE) of the Project as 100 to 150-ft., either side of the center line of the proposed alignment, 150-ft. around a point for bus stations, and 600-ft. around a point for transit centers. The APE is the extent where potential impacts would occur and captures potential constructive uses of Section 4(f) properties.

FTA and METRO, in consultation with the THC, identified two NRHP-listed resources and recommended 12 resources and two historic districts as eligible for listing in the NRHP. The THC concurred with the identification of historic properties and the potential effects of the undertaking on these properties based on the Historic Survey Report (June 2023) and Historic Survey Report Addendum (August 2023) in letters dated June 29 and September 9, 2023 contained in **Appendix B.**

The Evergreen Negro Cemetery is not eligible for the NRHP, but as suggested by the THC, the Evergreen Negro Cemetery will be treated as eligible. This treatment will provide the cemetery protection under the Section 106 regulations, 36 CFR 800, for construction activities within Lockwood Drive. No use, temporary or permanent, will occur and no acquisitions or easements are required from the cemetery. No construction activities will occur within the cemetery boundaries. Any sidewalk improvements will be made within existing public right-of-way. In the unlikely event that the design changes, and acquisitions are needed from the cemetery, consultation requirements will apply in the same manner as if the property were eligible for, or listed, in the National Register.

Table 2-1: National Register Eligible or Listed Historic Properties

Segment	Historic Resources
Segment 1	No resources are listed or recommended eligible.

[4] FHWA Policy Paper on Section 4(f) (adopted by FTA November 2012) Question 1A

Segment	Historic Resources
Segment 2	1836 Richmond Avenue is a Mission Revival style house eligible under Criterion C in the area of Architecture (TxDOT n.d.).
	3336 Richmond Avenue, is a New Formalism style building, designed by Neuhaus and Taylor, recommended eligible under Criterion C in the area of Architecture at the local level.
	3334 Richmond Avenue, is a New Formalism style building recommended eligible under Criterion C in the area of Architecture at the local level.
	3323 Richmond Avenue, is an Expressionism style building, designed by Neuhaus and Taylor, recommended eligible under Criterion C in the area of Architecture at the local level.
	3322 Richmond Avenue, is an International style building recommended eligible under Criterion C in the area of Architecture at the local level.
	3311 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
	3121 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
	3101 Richmond Avenue, is a New Formalism style building, recommended eligible under Criterion C in the area of Architecture at the local level.
Segment 3	Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy) at 1906 Cleburne Street was determined eligible for the NRHP under Criterion C in the area of Architecture (Mitchell and Pettis 2019).
	Third Ward Historic District. In 2019 the THC determined the district eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development and under Criterion C in the area of Architecture.
	Houston Negro Hospital at 3402 Ennis Street, S3 25a, is listed in the NRHP under Criterion A in the area of Ethnic Heritage/Black. The hospital and nursing school are on one parcel in the NRHP-eligible Third Ward Historic District.
	Houston School of Nursing School at 3402 Ennis Street, S3 25b, is listed under Criterion A in the area of Ethnic Heritage/Black and Criterion C in the area of Architecture. The hospital and nursing school are on one parcel in the NRHP-eligible Third Ward Historic District.
Segment 4	Eastwood Historic District. The THC determined the Eastwood subdivision is NRHP eligible under Criterion A for community planning and development as an intact streetcar suburban neighborhood and under Criterion C for its architecture, with boundaries generally corresponding to the original subdivision plat.
	Evergreen Negro Cemetery. This cemetery is not eligible for the National Register. Through consultation with THC, it has been determined that this cemetery will be treated as if it were eligible. This cemetery was the first African American cemetery in Fifth Ward, with the first recorded burial in 1887. However, the built environment surrounding the cemetery has changed over time, and no persons of note are buried in the cemetery.
	International Harvester Company (Texas Mattress Makers), 4901 Navigation Boulevard, Resource S4 61. International Harvester Houston Branch House represents the thriving economy of Houston and the investment of international firms into the economy during the Great Depression Era (1929-1941). Houston Branch House is recommended eligible under Criterion A in the area of Commerce at the local level of significance.

Segment	Historic Resources
	Western Electric Company (Harris County Sheriff Offices), 601 Lockwood Drive, Resource S4 62. The building at 601 Lockwood Drive was constructed circa 1948 and was occupied by Southwestern Bell Telephone Company, Western Electric Company, and Whole Electric Supplies. The Southwestern Bell Telephone Company building represents the thriving economy of Houston after World War II and is recommended eligible under Criteria A, in the area of Commerce at the local level of significance. The building is intact and a good example of the Art Deco style. The building is recommended eligible under Criterion C in the area of Architecture at the local level of significance.
Segment 5	Kashmere Gardens Elementary School, 4901 Lockwood, Resource S5 103, was an all-white school when it opened in 1949. Following a lawsuit by several Black families in 1960, the school became the first integrated school in Houston. It is recommended eligible under Criterion A in the area of Social History under the Civil Rights Movement at the local level of significance.

3 Use of Section 4(f) Properties

Tables 3-1 and 3-2 provide a summary of the assessment completed to confirm that, other than three *de minimis* impacts, no permanent or temporary use of a park, recreation area or historic property would occur, and that the proximity of the Project would not cause any effects (such as access disruption, noise, vibration, or aesthetic) that would substantially impair the features or attributes that qualify the resource for protection under Section 4(f) and, therefore, constitute a constructive use.

The only activities that would occur within the boundaries of Section 4(f) properties, would include the improvement of existing sidewalks to the City's current design standards included in the City of Houston Infrastructure Design Manual. These improvements will provide improved accessibility for disabled persons, as required by the ADA and for a sidewalks/shared use path to be constructed at the same time as the BRT to improve pedestrian safety, bicycle connectivity, and vehicular buffer distances.

3.1 Use of Parks and Recreation Areas

The 51 parks within the study area were evaluated for "use" as defined by Section 4(f). FTA determined three parks would have minor uses of park property to construct wider 6'-10' sidewalks within the boundaries of Mandell Park, Peggy Park, and Diez Street Park. These sidewalk improvements will bring the existing sidewalks up to the City's current design standards and improve pedestrian/bicycle and handicap access.

No property would be acquired from a park or recreation area for permanent incorporation into the Project, other than the *de minimis* impacts of the three parks for ADA improvements for sidewalks. Effects would be minimal and would not substantially impair the features or attributes that qualify any of the parks and recreation areas afforded protection; therefore, no constructive use would occur.

A construction activity right of entry will be granted by the HPARD for Mandell Park, Peggy Park, and Diez Street Park. The construction activities will be temporary and the OWJ has provided agreement that these activities would result in a *de minimis* impact (See Appendix B).

Table 3-1: De Minimis Impacts of Park and Recreation Areas

Segment	Name	Property Size (acres)	Location	Potential Impact Area (acres)	Total Property Impacted (%)
2	Mandell Park	1.71	1500 Richmond Ave, 77006	0.01	0.36%
3	Peggy Park	2.23	Almeda Rd, 77004	0.0065	0.29%
4	Diez Street Park	9.09	5825 Dumble St, 77023	0.03	0.38%

Source: METRO 2023

3.2 Coordination with City of Houston Parks and Recreation Department

FTA and METRO coordinated with the HPARD over the city-owned Section 4(f) properties described in this report during development and evaluation of the preliminary alternatives and refinement of the Locally Preferred Alternative. METRO and HPARD reviewed the proposed design and potential Section 4(f) park and recreational area uses to minimize impacts on these resources and provide for increased accessibility to the parks. HPARD supports the sidewalk improvements and have provided a letter concurring with FTA's *de minimis* impact determination for Mandell, Peggy, and Diez Parks. HPARD also confirmed that Peggy's Point Plaza is no longer significant and is being sold and transferred from park ownership.

3.3 Public Notification and Opportunity to Comment on Section 4(f) *De Minimis* Use of Parks

Section 4(f) regulations at 23 CFR 774.5 states that "public notice and an opportunity for public review and comment concerning the effects on the protected activities, features, or attributes of the property must be provided. This requirement can be satisfied in conjunction with other public involvement procedures, such as a comment period provided on a NEPA document."

Approximately 20 in-person public meetings and two virtual ones have been held for the general public and interested citizens throughout the NEPA process to receive community input on the effects of the project. The public meetings have been accompanied by meetings with local organizations, neighborhoods, universities, and various stakeholders. METRO sought public involvement on property acquisitions and impacts in a series of public workshops in February and March 2023. During these meetings, maps showed the locations of sidewalk expansions and ADA improvements and included the three parks with minor *de minimis* impacts for sidewalk improvements. METRO posted the materials from these meetings on their website for further review and comment. Community coordination is ongoing, and METRO considers all public and stakeholder input as it refines the design of the Project to maximize transportation and community benefits. These efforts will continue during the engineering phase to further avoid and minimize impacts to Section 4(f) resources and private property.

Specific to the three parks with minor park METRO has posted HPARD's concurrence letter and figures 3-1a, 3-1b and 3-1c of this report illustrating the *de minimis* impacts to park resources on the project website. No comments have been received from the website posting. METRO has also included a presentation reviewing the sidewalk expansions and a public display board at design workshops held in 6 locations along the corridor between September 13th and the 20th. METRO received six comments pertaining to parks during the workshops. These comments included providing parking, needing improved sidewalks, access, including access for strollers, connectivity, road lanes and power lines. See below for comments received and their associated segment.

- "Need to ensure there is enough parking along Wheeler near Peggy. Lots of homes and I don't see parking for homeowners" Segment 3
- "Need improved sidewalks & access as this is a busy intersection (Almeda at Wheeler)" Segment 3
- "I want to wait for the BRT "in the park". How can Mandell Park connect more to the BRT station" Segment 3
- "Can you bury power lines as part of this project? Can the TIRZ or MMD help?" Segment 2
- "Please don't take away lanes at Mandell or Richmond" Segment 2
- "Don't forget about families with strollers" Segment 2

The Section 4(f) *de minimis* public notification was completed throughout the project, posted on the Project website, and the public was provided the opportunity for review and comment at the design workshops. These activities satisfy the federal requirement for a *de minimis* impact public notification for review and comment.

3.4 *De Minimis* Impact Determinations – Parks

The following three parks will have a minor amount of property permanently incorporated into existing sidewalks when the Project is constructed to provide for ADA improvements. Right-of-Entry to METRO contractors will be granted for construction but no acquisitions or easements will be granted.

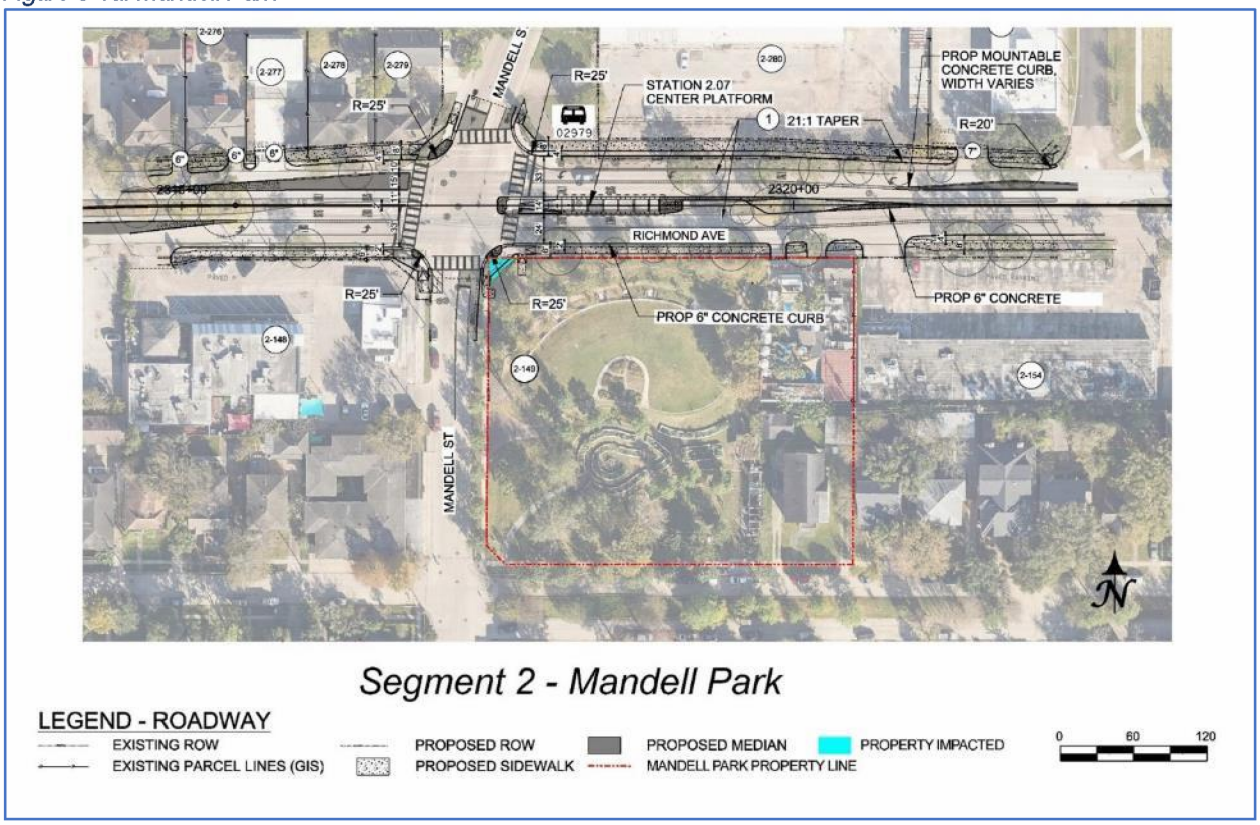
3.4.1 Mandell Park

Mandell Park is a 1.24-acre park surrounded by Bonnie Brae, Mandell and Richmond Avenue in Houston's Museum District. The property was originally half residential (Bonnie Brae side) and half commercial (Richmond side). Amenities include a community garden, with a mixture of native plants, trees and grasses to attract birds and butterflies and a host of special features to attract visitors. It is used by the area residents and people from all over the city for events, picnics and a nice place to visit.

METRO contractors will obtain a right-of-entry to construct a proposed wider sidewalk and accessible ADA ramp to replace the existing sidewalk on approximately 0.01 acres (less than 1 percent of the total park area) along the sidewalk of the northern edge of the property (**See Figures 3-1a and 3-1b**). The Project will enhance the existing sidewalk and retain the use of the existing sidewalk, resulting in an enhancement providing improved pedestrian and bicycle access.

Consultation with the OWJ has confirmed that these temporary construction activities would not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Figure 3-1a: Mandell Park



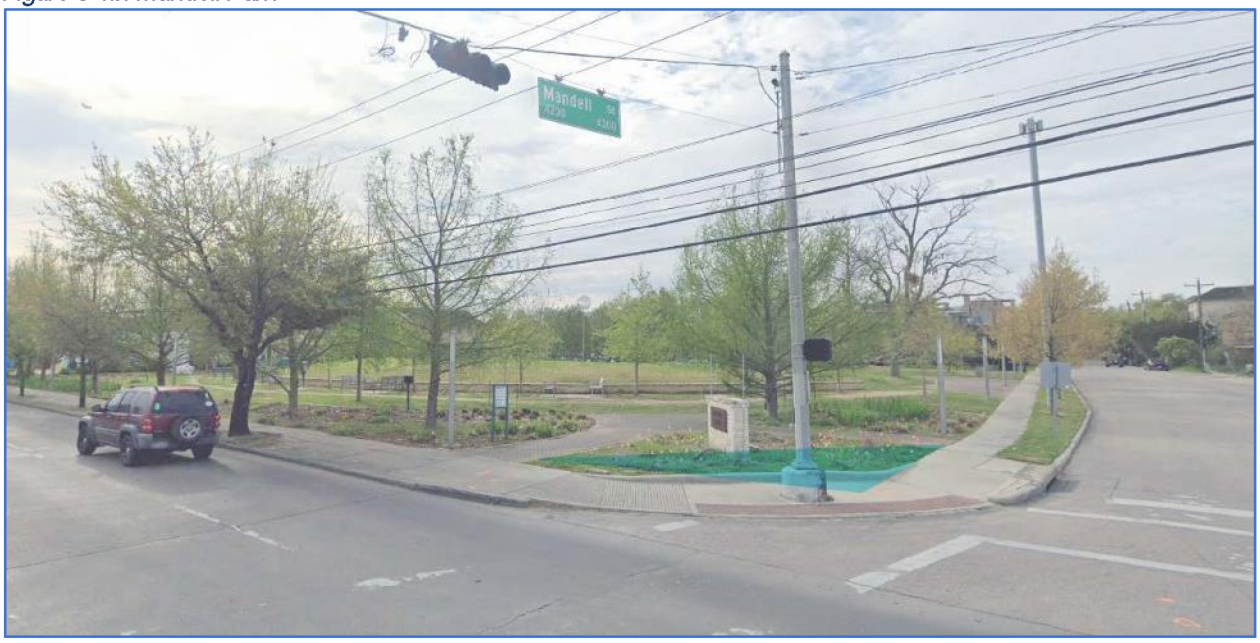


Figure 3-1b: Mandell Park

3.4.2 Peggy Park

Peggy Park is a 2.26-acre triangle shaped neighborhood park located at 4208 Chenevert Street, adjacent to the Project corridor. The park, which is just west of the Young Women's Preparatory Academy, features a children's playground, covered basketball court and picnic tables.

The Project would provide a proposed wider ADA-compliant sidewalk, which would replace the existing sidewalk affecting approximately 0.01 acres (less than 1 percent of total park area) along the northern edge of the property (**Figures 3-2a and 3-2b**). The new wider sidewalk would maintain pedestrian connectivity to the property. Consultation with the OWJ has confirmed that these temporary construction activities would not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Figure 3-2a: Peggy Park

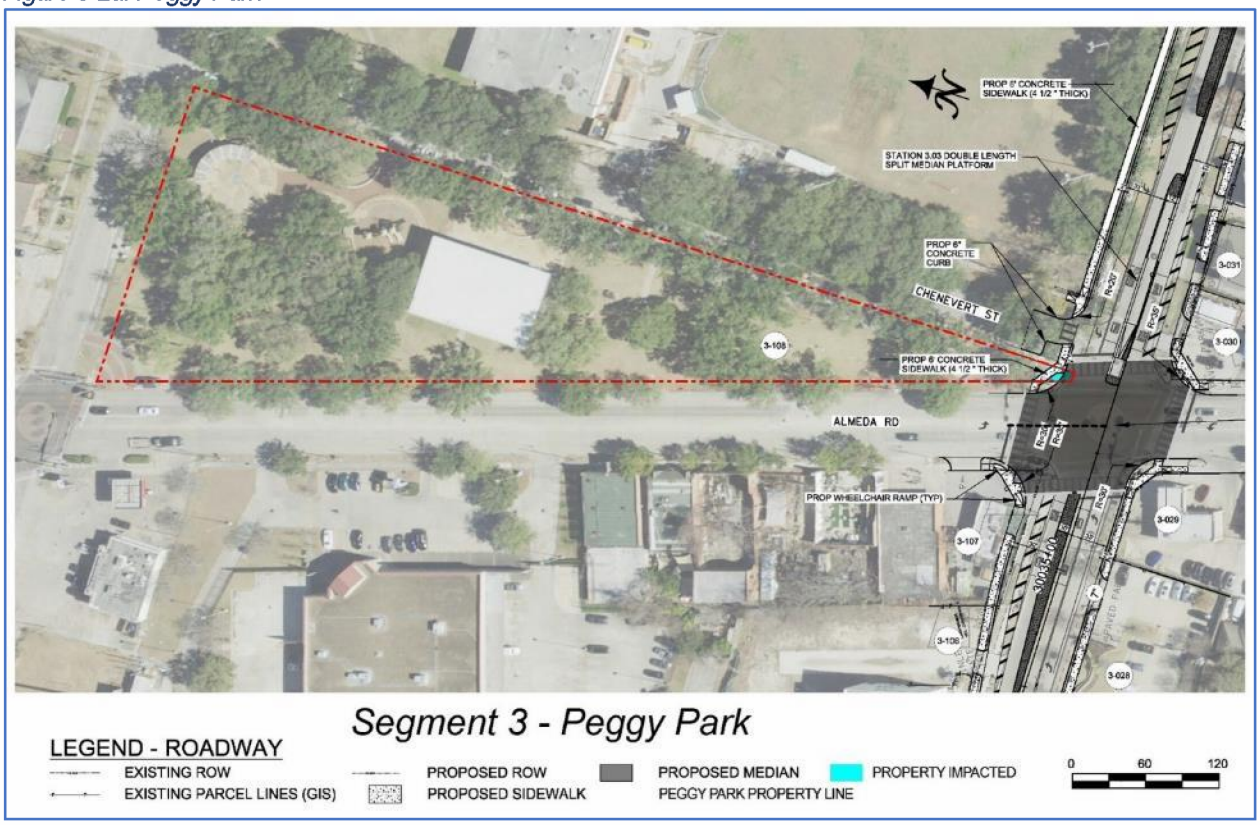

Figure 3-2b: Peggy Park

3.4.3 Diez Street Park

Austin High Baseball Stadium/Diez Street Park is a school recreational area located at 5825 Dumble Street/4700 Diez Street, south of the Stephen F. Austin High School main campus, adjacent to the corridor. The property is comprised of approximately 9 acres and contains several baseball fields, concession stands, and tables.

The Project would provide a new proposed shared-use path, which would replace the existing sidewalk. This larger sidewalk would be constructed on approximately 0.12 acres (1.31 percent of total park area) along the western edge of the property. **See Figure 3-3a and 3-3b**. Consultation with the OWJ has confirmed that these temporary construction activities would not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Figure 3-3a: Austin High Baseball Fields/Diez Street Park

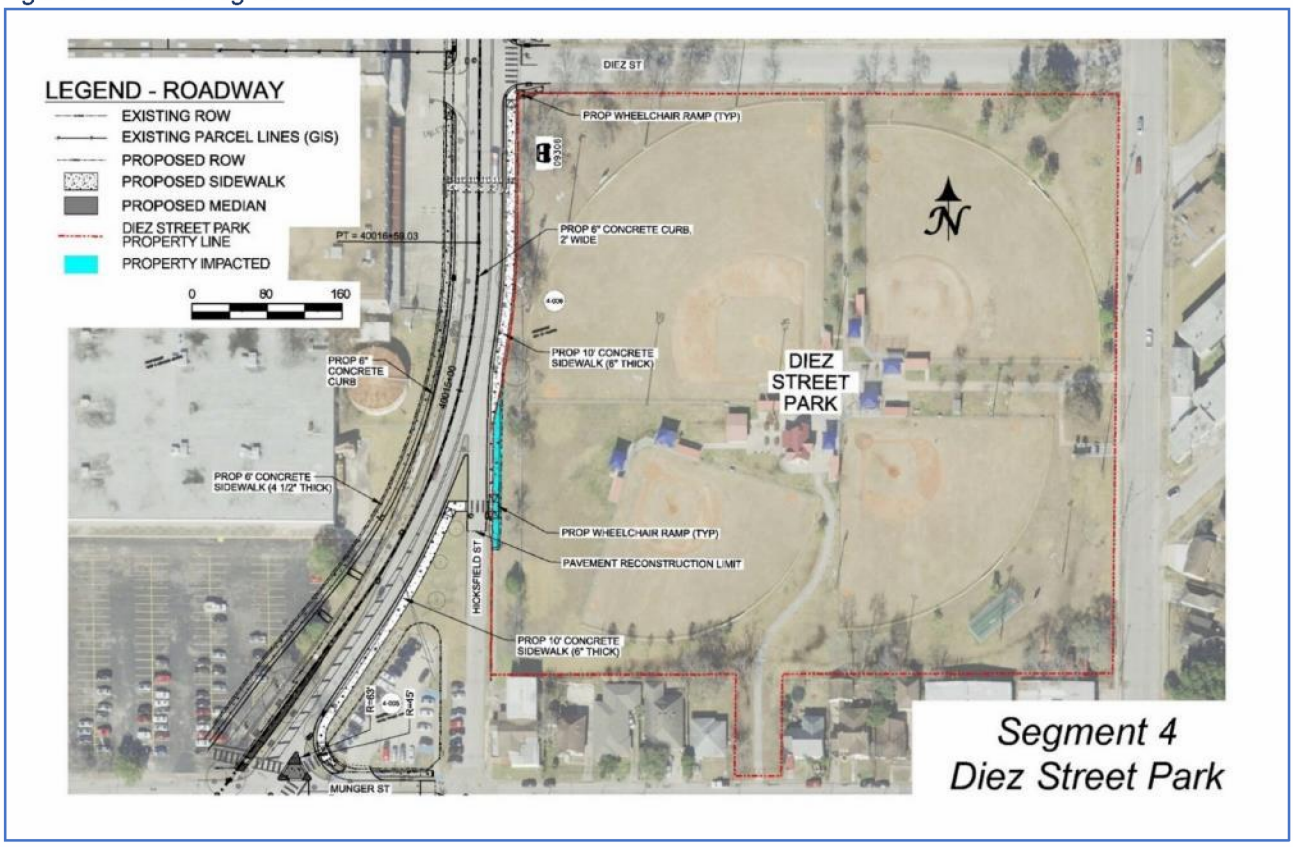

Figure 3-3b: Austin High Baseball Fields/Diez Street Park

3.4 4 Chapter 26 of the Texas Parks and Wildlife Code

Chapter 26 of the Texas Parks and Wildlife Code limits a municipality's authority to approve programs or projects that require the use or taking of public land previously designated and used as a park or recreation area. Before taking or changing the use of park land or a recreation area, the municipality must first determine that:

- "there is no feasible and prudent alternative to the use or taking of such land; and,
- the program or project includes all reasonable planning to minimize harm to the land, as a park, recreation area, scientific area, wildlife refuge, or historic site, resulting from the use or taking."

The HPARD has determined that the sidewalk expansions at Mandell Park, Peggy Park, and Diez Street Park will not require a use or taking of public land and therefore Chapter 26 requirements do not apply. METRO's contractors will receive a temporary right of entry to conduct the expansion of the perimeter sidewalks as shown in Figures 3-1a through 3-3c. The alternative to not widening the sidewalks is that the sidewalks would remain as they are and would not provide the benefit of more space for bicycles and wheelchairs and would not be ADA compliant. METRO coordinated with the HPARD in order to conduct all reasonable planning to minimize harm and reduced the impacts to parks to the greatest extent. All vegetation will be replaced within the parks to mitigate any vegetation loss that could occur during construction. HPARD coordination letters are included in Appendix B.

3.5 Use of Historic Properties

For historic properties, minor property acquisitions would be needed along sidewalks and the corners of streets to meet the City's current design standards. These acquisitions will require the purchase of minor amounts of right-of-way near existing sidewalks and streets. These improvements will provide improved accessibility for disabled persons, as required by the ADA and expanded sidewalks for a shared use path to be constructed alongside of the BRT on existing sidewalks to improve pedestrian safety, bicycle connectivity, and vehicular buffer distances. These minor acquisitions would not alter the characteristics that qualify each of the properties and/or districts for the NRHP. Effects are limited to minor acquisitions. No other direct or indirect impacts would result to historic properties.

Under Section 106 of the National Historic Preservation Act, FTA determined there would be No Adverse Effect to historic properties. THC concurred with this determination. FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions (See Appendix B and Table 3-2). The following section describes the acquisitions and effects for each historic property and METROs minimization of effects specific to each historic property.

Table 3-2: Section 4(f) Evaluation by Resource –Historic Properties

Segment	Name	Property Size (acres)	Location	Potential Impact Area (acres)	Total Property Impacted (%)	Determination
2	1836 Richmond Avenue	n/a	1836 Richmond Avenue	0	0	*No Use*
2	3336 Richmond Avenue	1.93	3336 Richmond Avenue	0.02	0.0087%	*De Minimis*
2	3334 Richmond Avenue	n/a	3334 Richmond Avenue	0	0	*No Use*
2	3323 Richmond Avenue	n/a	3323 Richmond Avenue	0	0	*No Use*
2	3322 Richmond Avenue	n/a	3322 Richmond Avenue	0	0	*No Use*
2	3121 Richmond Avenue	n/a	3121 Richmond Avenue	0	0	*No Use*
2	3311 Richmond Avenue	n/a	3311 Richmond Avenue	0	0	*No Use*
2	3101 Richmond Avenue	0.93	3101 Richmond Avenue	112	0.27%	*De Minimis*
3	Albert Sidney Johnston Jr. High School (Young Women's Preparatory Academy)	9.99	1906 Cleburne Street	.11	1.09%	*De Minimis*
3	Third Ward Historic District	5.66	Third Ward Historic District	.07	1.27%	*De Minimis*

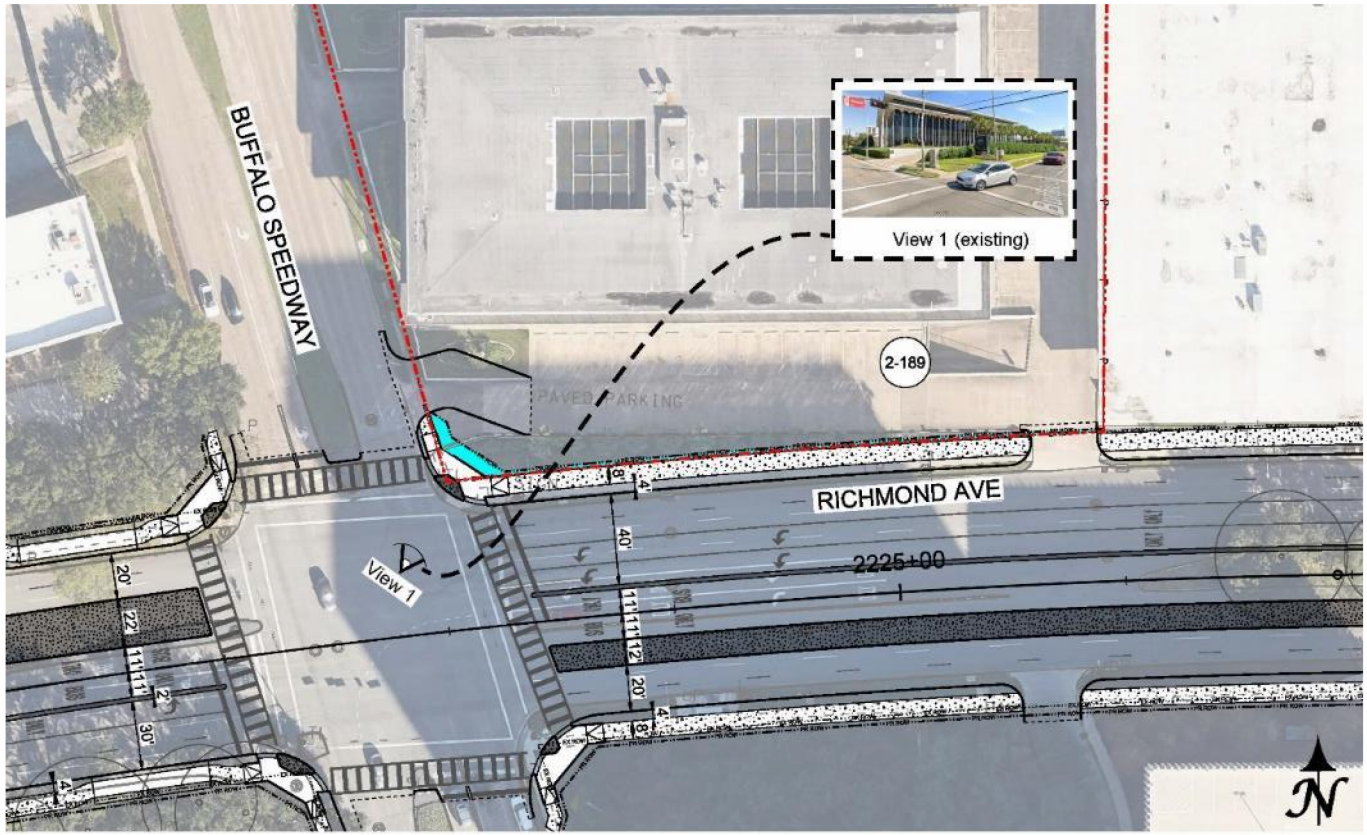
5	Kashmere Gardens Elementary School	5.0	4901 Lockwood	0	0	*No Use*



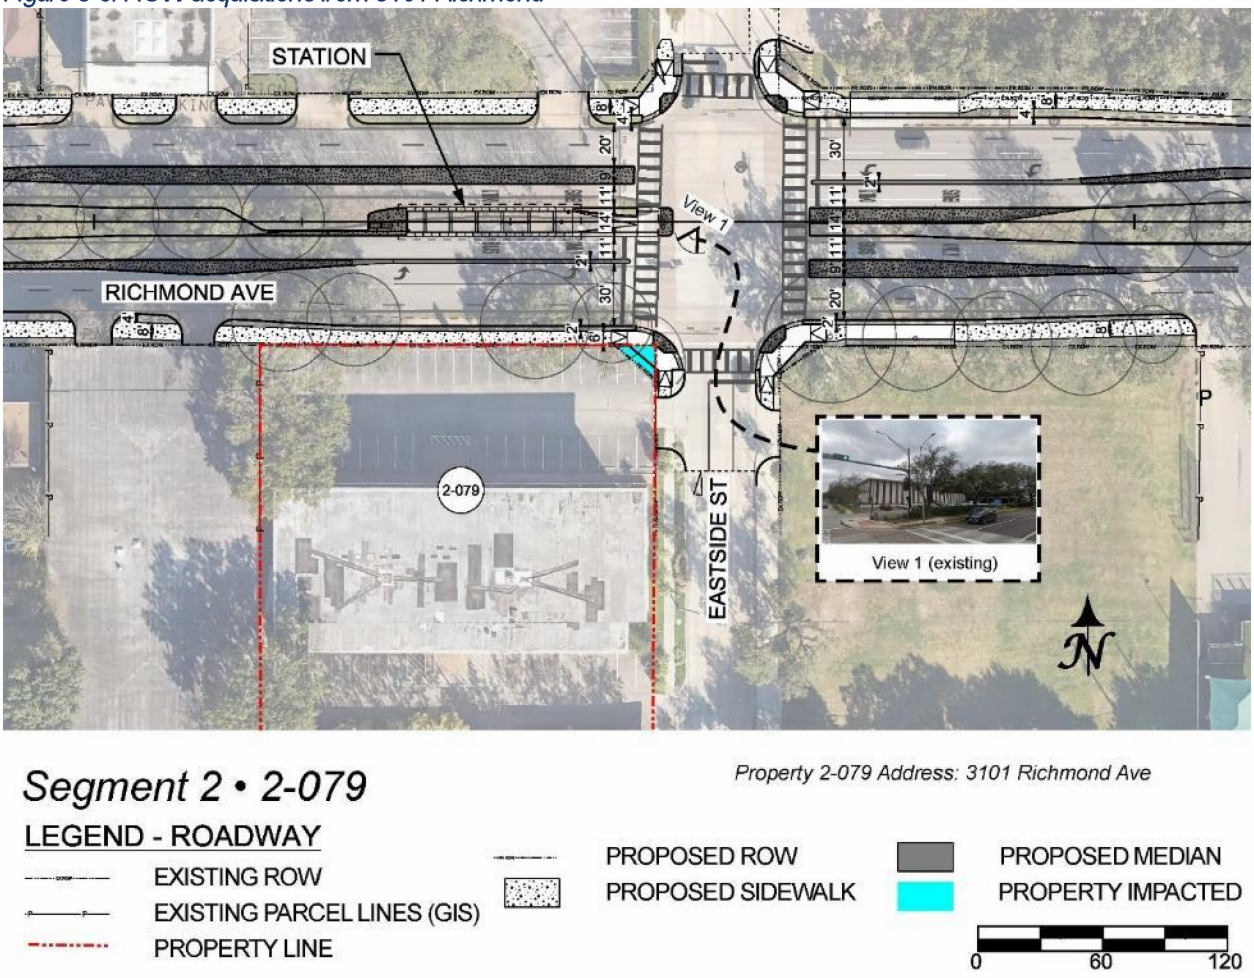
3.5.1 *De Minimis* Impact Determinations – Historic

3.5.1.1 3336 Richmond Avenue

3336 Richmond Avenue is eligible under Criterion C, Architecture. The parcel is located at the northeast corner of Richmond Avenue and Buffalo Speedway. The ROW acquisition is 730 square feet (sf.) for a total percentage of 0.0087 of land. The building is sited at an angle to Richmond Avenue approximately 73 to 90-ft. north of the existing curb. A parking lot, green space, a 3.5-ft. sidewalk, green space, and a curb occupy the space between the building's front façade and Richmond Avenue. The land acquisition for the parcel is along Richmond Avenue, reducing the green space to 2 to 4-ft. in width and increasing the sidewalk to 8-ft. Landscaping will still be included in the same location and would not alter the characteristics that qualify the resource under Criterion C. **(See Figure 3-4).**

FTA determined there would be No Adverse Effect to this historic property. THC concurred with this determination. FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions.

Figure 3-4: ROW acquisitions from 3336 Richmond

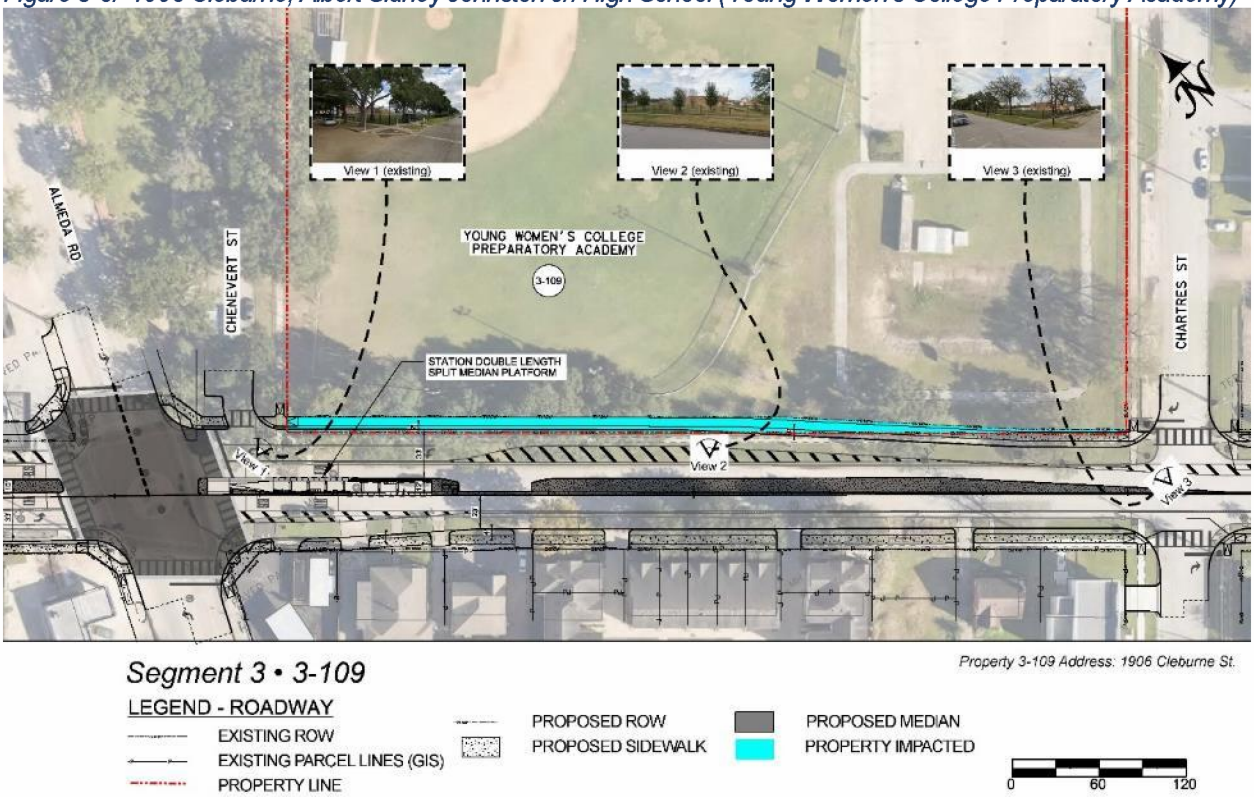


3.5.1.2 3101 Richmond Avenue

The historic property at 3101 Richmond Avenue is a 40,482-sf. parcel at the southwest corner of Richmond and Eastside streets. The ROW acquisition is 112-sf. for a total percentage of 0.0027 of land. The building is sited parallel to Richmond Avenue and approximately 78-ft. south of the existing curb. A parking lot, green space, a sidewalk, green space, and a curb occupy the space between the building's front façade and Richmond Avenue. The proposed new ROW is a corner clip at Richmond and Eastside Streets. It would not impact the building's integrity of location, design, setting, materials, workmanship, feeling, or association. **(See Figure 3-5).**

FTA determined there would be No Adverse Effect to this historic property. THC concurred with this determination. FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions.

Figure 3-5: ROW acquisitions from 3101 Richmond



3.5.1.3 1906 Cleburne Street: Albert Sidney Johnston Jr. High School (Young Women's College Preparatory Academy)

The Albert Sidney Johnston Jr. High School (Young Women's College Preparatory Academy) school building, (NRHP eligible) is located within a 434,999-sf. parcel, which also contains the baseball field (not recommended NRHP eligible). The campus is bounded by the streets of Cleburne, Chartres, Chenevert, and Wheeler, with the NRHP eligible building oriented to Cleburne Street. A service road, parallel to Wheeler Avenue connects Chenevert and Chartres Streets and bifurcates the campus, separating the NRHP eligible building from a baseball field and parking lot. The proposed ROW acquisition would include 4,744-sf. along Wheeler Avenue, roughly 400-ft. southwest of the service road at the rear façade of the school. The baseball field is modern, built circa 1990, and is not part of the recommended boundary for the NRHP eligible school. The ROW acquisition would not impact the NRHP eligible property's integrity of location, setting, design, materials, workmanship, feeling, or association, nor its ability to convey its architectural significance under Criterion C. **(See Figure 3-6).**

FTA determined there would be No Adverse Effect to this historic property. THC concurred with this determination. FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions.

Figure 3-6: 1906 Cleburne, Albert Sidney Johnston Jr. High School (Young Women's College Preparatory Academy)

3.5.1.4 Third Ward Historic District

Segment 3 of the Project would travel through the NRHP-eligible Third Ward Historic District. Within the historic district are two individually NRHP listed resources, The Houston Negro Hospital and Nursing School both have proposed ROW acquisition. New corner clips are proposed throughout the district (**See Table 3-3 and Figures 3-7a, 3-7b, and 3-7c**).

Table 3-3. Acquisitions from property within the NRHP-Eligible Third Ward Historic District.

Parcel	Address	Status	Parcel Sq ft	Acq. Sq ft	Acq area (acres)	Corner Clip	Buffer

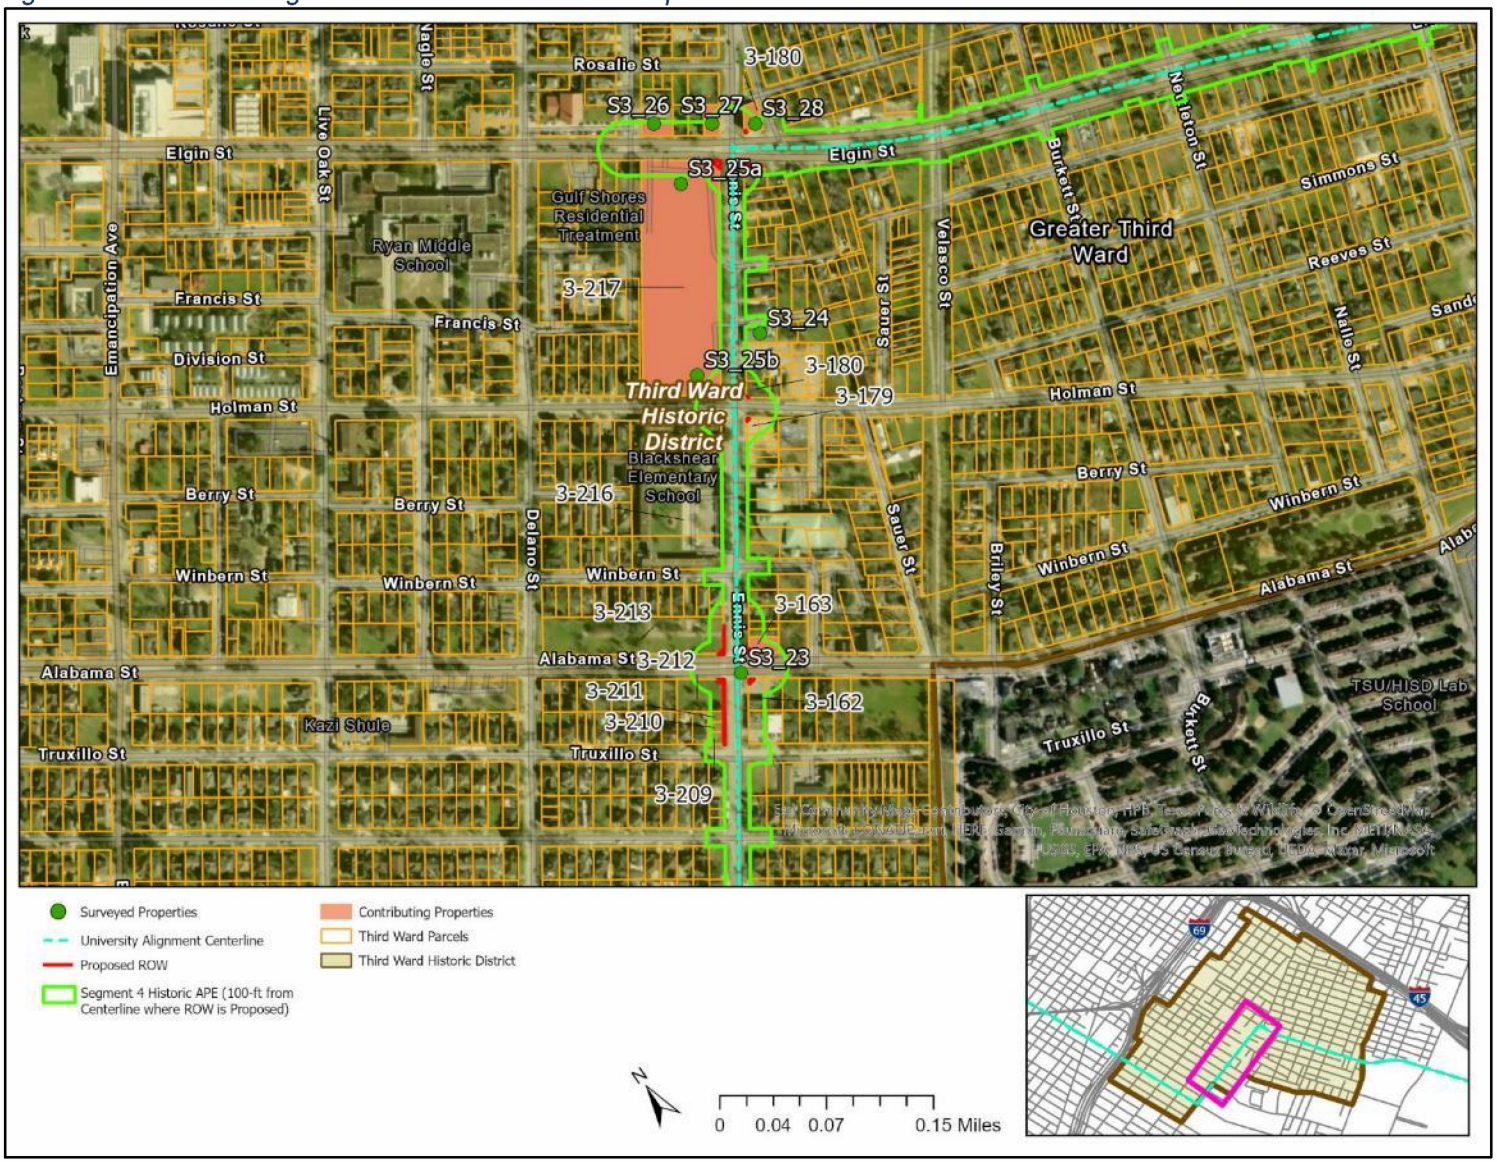
Source: METRO 2023, Historic Survey Report Addendum

In 2008 and 2019, the THC determined the Third Ward Historic District eligible under Criterion A in the areas of Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development, and eligible under Criterion C in the area of Architecture. A NRHP nomination

completed in 2008 describes the architecture as varied and following national architectural movements. (Randall and Korfmacher 2008: E 19). There was no discussion of landscape or setting in the NRHP nomination. The NRHP nomination has not gone through the designation process at the time this report was written. The houses abutting Wheeler Avenue are predominately Tudor style with front yards, a sidewalk and green space before the curb which is typical for this era. The historic district covers roughly 750 acres. The removal of 3,125 sf. of landscaping for eleven parcels is nominal and would not alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association.



FTA determined there would be No Adverse Effect to all of the historic properties located within the Third Ward Historic District (listed in the following section). THC concurred with this determination. FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions.

Figure 3-7a: Third Ward Eligible NRHP Historic District with Proposed ROW.

Figure 3-7c: Third Ward Eligible NRHP Historic District with Proposed ROW.

Source: AmaTerra 2023

2201 Wheeler Avenue (Parcel 3-111)
The property at the corner of Hutchins and Wheeler is 2201 Wheeler Avenue and the 9.7 sf. to be acquired is property owned by the State of Texas left from the construction of US-69. No acquisition of property would be made from the residential property **(Figure 3-8)** although the address is the same.

2202 Wheeler Avenue (Parcel 3-046)
The property acquisition at the vacant property at the corner of Hutchins Street and Emancipation Avenue, 2201 and 2203 Wheeler Avenue would include a corner and a strip acquisition of 275.9 sf. behind the existing sidewalk **(Figure 3-8)**.

4402 Emancipation Avenue (Parcel 3-055)
The property acquisition at 4402 Emancipation Avenue would include a small triangle of 5.3 sf. behind the existing sidewalk **(Figure 3-9)**.

4405 Emancipation Avenue (Parcel 3-056)
The property acquisition at 4405 Emancipation Avenue would include a small triangle of 23.1 sf. behind the existing sidewalk **(Figure 3-9)**.

4314 Emancipation Avenue (Parcel 3-120)
The property acquisition at 4314 Emancipation Avenue would include a small triangle of 5.0 sf. behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-9)**.

4311 Emancipation Avenue (Parcel 3-121)
The property acquisition at 4311 Emancipation Avenue would include a small triangle of 33.7 sf. behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-9)**.

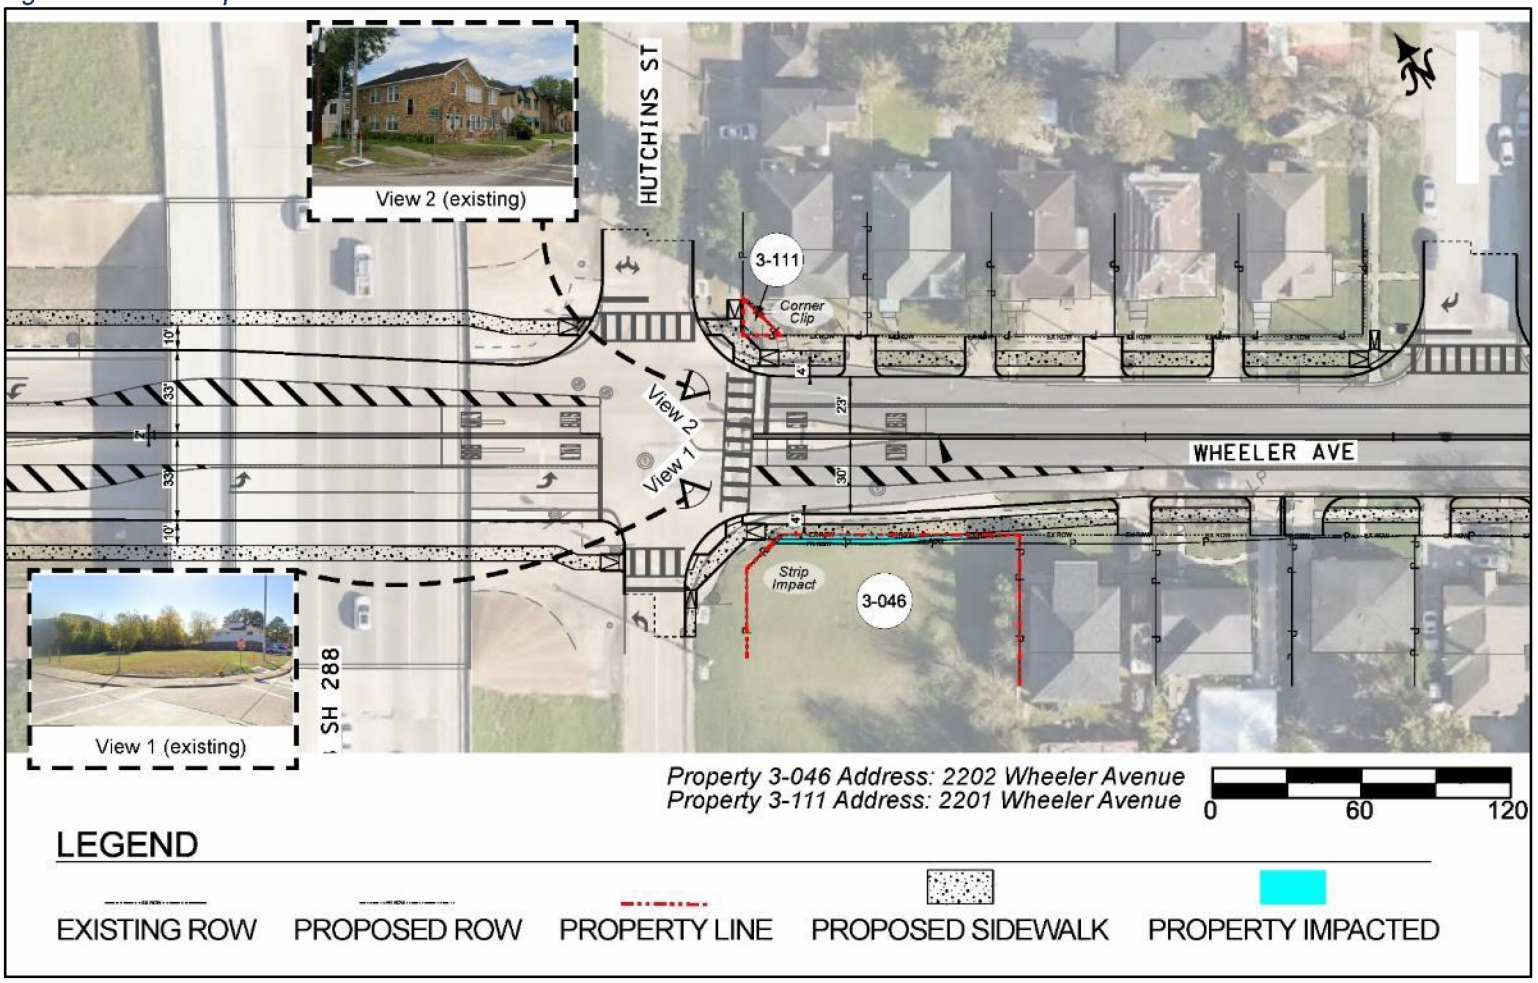
2405 Wheeler Avenue (Parcel 3-122)
The property acquisition at 2405 Wheeler Avenue would include a small triangle of 4.8 sf. behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-9)**.

2411 Wheeler Avenue (Parcel 3-123)
The property acquisition at 2411 Wheeler Avenue would include a small triangle of 4.2 sf. behind the existing sidewalk for a sidewalk and a wheelchair ramp **(Figure 3-9)**.

3002 Alabama Street (Parcel 3-162)
The property acquisition at the intersection of Ennis and Alabama Streets, 3002 Alabama Street, would include a corner clip of 123.8 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-9)**.

3003 Alabama Street (Parcel 3-163)
The property acquisition at the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 210.5 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-9)**.

Figure 3-8: ROW acquisitions from 2201 and 2202 Wheeler Avenue



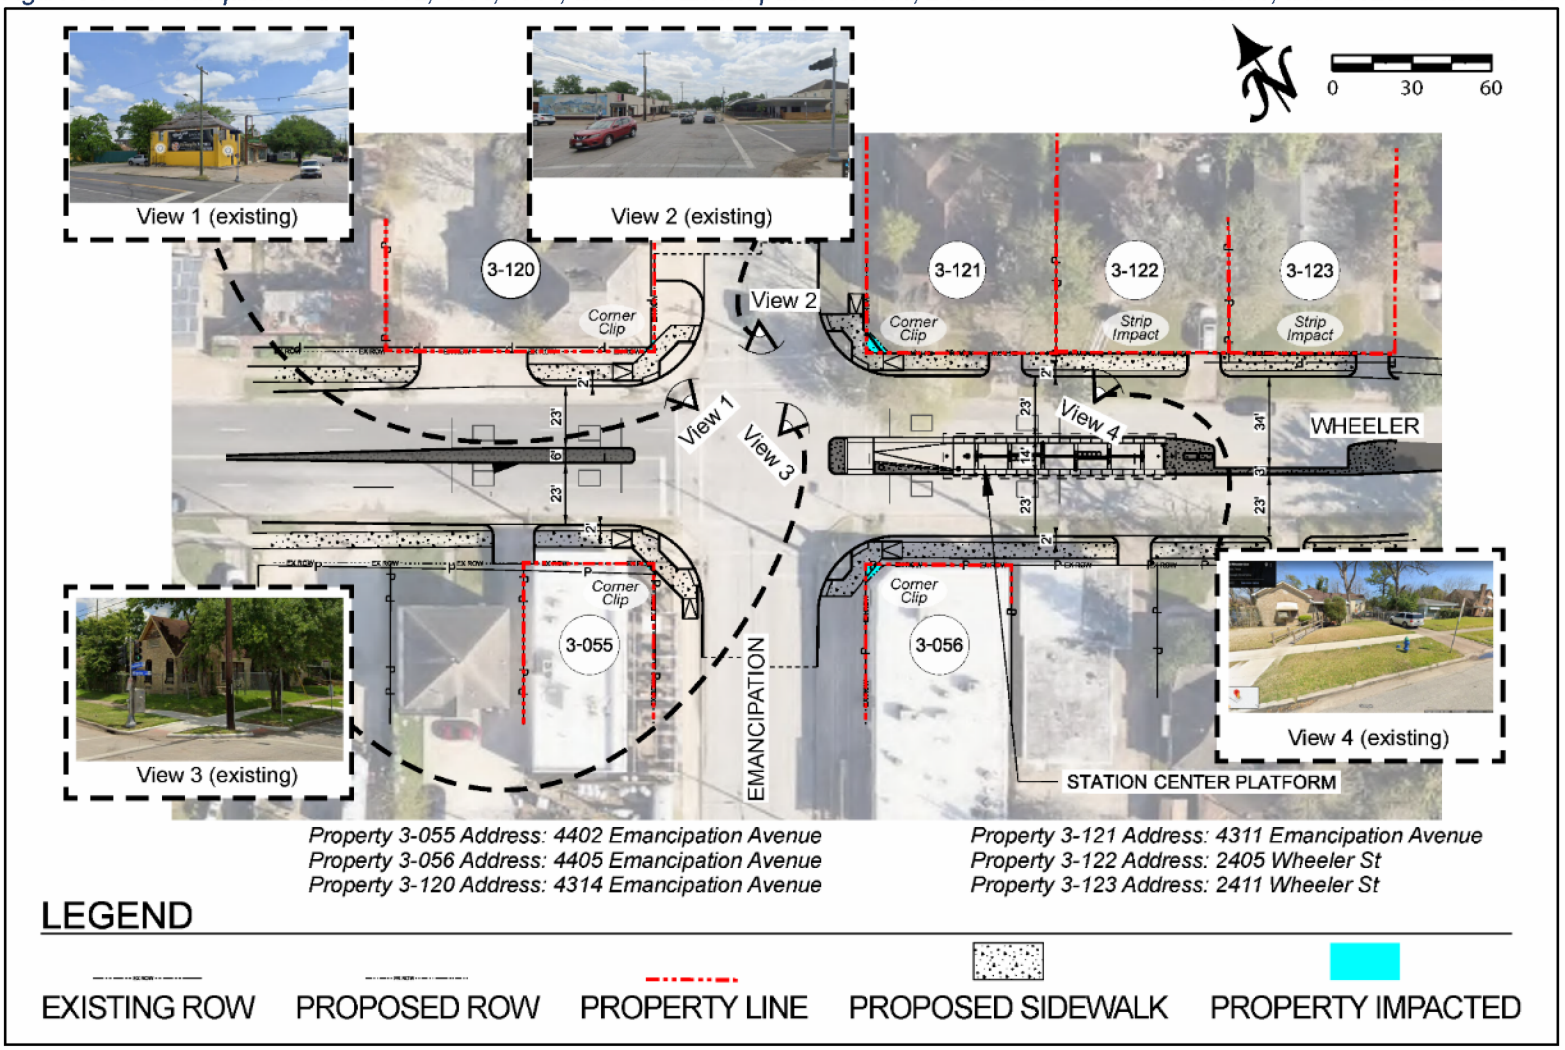


Figure 3-9: ROW acquisitions from 4402, 4405, 4314, and 4311 Emancipation Avenue; 2405 and 2411 Wheeler Avenue; and 3002 Alabama Street

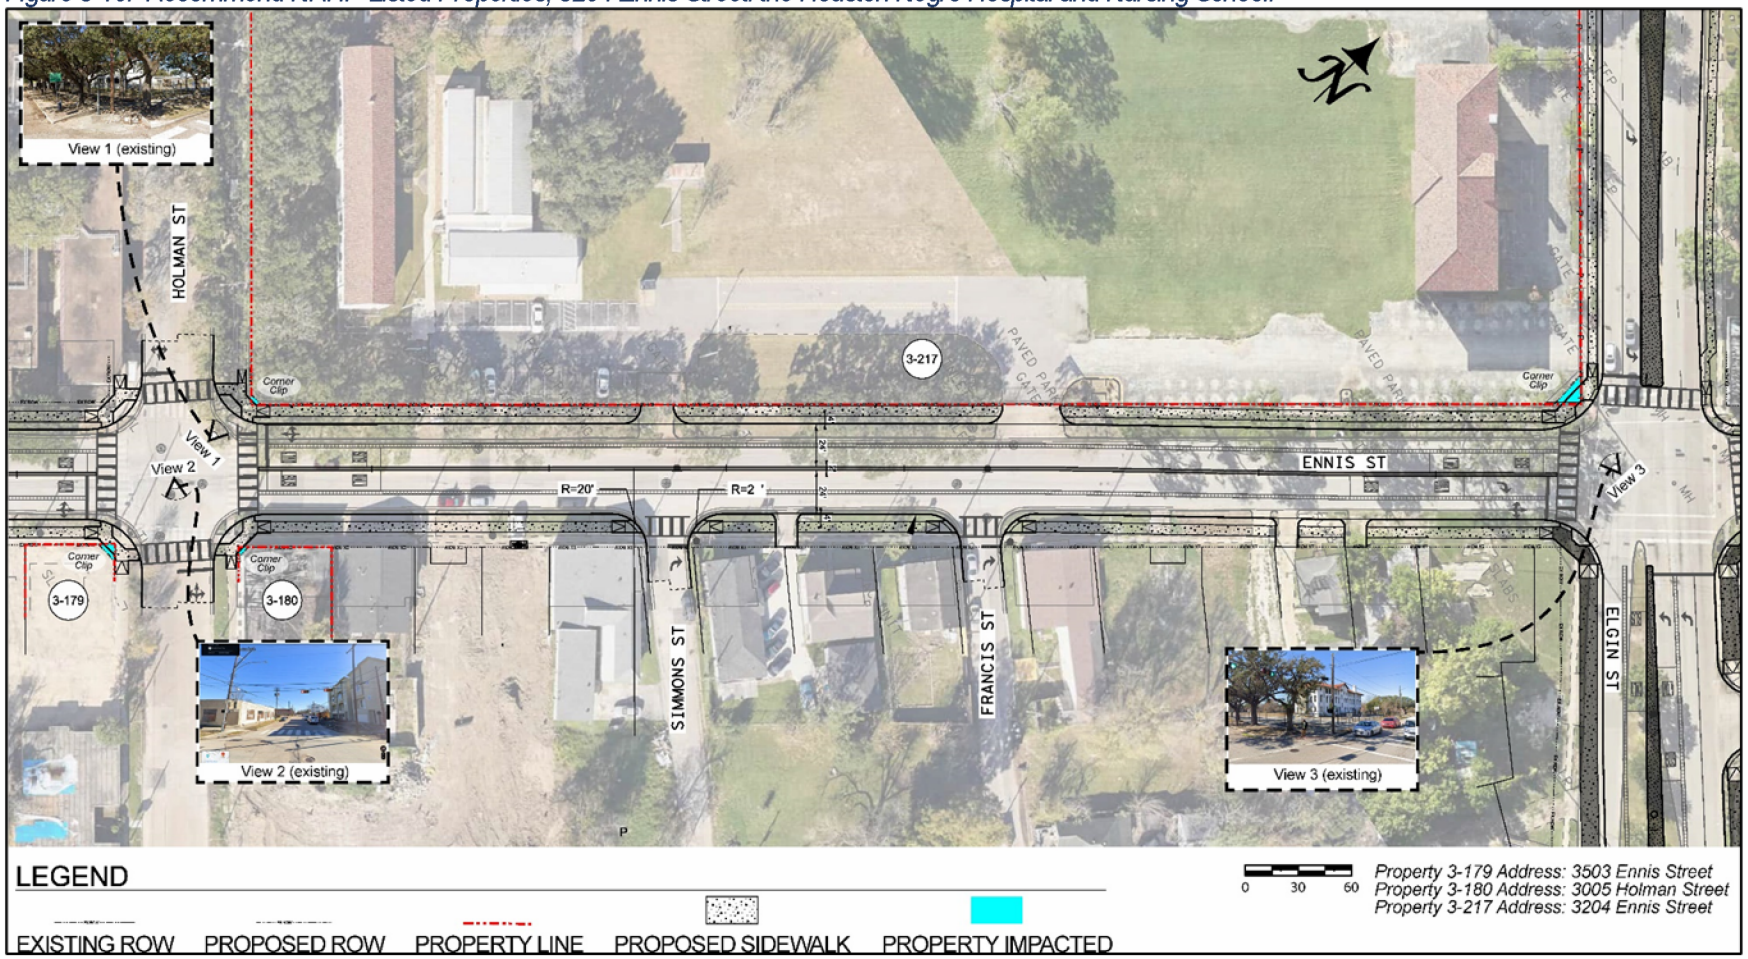
3503 Ennis Street (Parcel 3-179)
The property acquisition at the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 42.8 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-10)**.



3.5.1.5 The Houston Negro Hospital and Nursing School

3204 Ennis Street (Parcel 3-217) – The Houston Negro Hospital and Nursing School
The Houston Negro Hospital and Nursing School, at 3204 Ennis, are listed on the NRHP as individual resources. Both buildings are located on the same parcel and contribute to the NRHP eligible Third Ward Historic District. The parcel is the length of one city block bounded by Ennis, Elgin, and Holman streets. The parcel is 187,000-sf. with a parcel length of 251-ft. adjacent to Elgin Street. The Project would require the ROW acquisition of 2,729-sf. along Elgin Street (**See Figure 3-10).** The building is parallel to Elgin Street at the northern portion of the parcel where the new ROW is proposed. An asphalt parking lot, vegetation, and sidewalk occupy the space between the hospital and the road. The ROW would remove the sidewalk and grass; however, a new sidewalk be added. The hospital building is designated for its association with ethnic and social history, and the land proposed for ROW acquisition does not play a role in the resources' ethnic and social history. Based on the small percentage of land proposed for the ROW acquisition to the overall parcel and the hospital building's historic relationship to the road, the proposed ROW would not impact the property's integrity of location, setting, design, materials, workmanship, feeling, or association, or impact the property's ability to convey its historic significance under Criterion A.

The Nursing School is located at the northwest corner of Holman and Ennis streets. ROW acquisition consists of a corner clip at an existing sidewalk for compliance with ADA. The corner clip would not impact the property's ability to convey its significance under Criterion A or Criterion C or diminish its integrity of location, setting, design, materials, workmanship, feeling, or association.

3005 Holman Street (Parcel 3-180)
The property acquisition at the northeast corner of the intersection of Ennis and Alabama Streets, 3003 Alabama Street, would include a small triangle of 14.4 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-10)**.

Figure 3-10: Recommend NRHP-Listed Properties, 3204 Ennis Street: the Houston Negro Hospital and Nursing School.

2918 Wheeler Avenue (Parcel 3-194)
The property acquisition at 2918 Wheeler would include a small triangle of 31.7 sf. behind the existing sidewalk at the southeast corner of Ennis Street and Wheeler Avenue for a sidewalk and a wheelchair ramp **(Figure 3-11)**.

2917 Wheeler Avenue (Parcel 3-195)
The property acquisition at 2917 Wheeler would include a small triangle of 82.9 sf. behind the existing sidewalk at the northeast corner of Ennis Street and Wheeler Avenue for a sidewalk and a wheelchair ramp **(Figure 3-11)**.

3812 Ennis Street (Parcel 3-209)
The property acquisition at the intersection of Truxillo and Ennis Streets, 3812 Alabama Street, would include 226.2 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-12)**.

3808 Ennis Street (Parcel 3-210)
The property acquisition at 3808 Ennis Street, would include 191.5 sf. behind the existing sidewalk for a widened sidewalk **(Figure 3-12)**.

3806 Ennis Street (Parcel 3-211)
The property acquisition at 3806 Ennis Street, would include 202.8 sf. behind the existing sidewalk for a widened sidewalk **(Figure 3-12)**.

2908 Alabama Street (Parcel 3-212)
The property acquisition at the intersection of Alabama and Ennis Streets, 2908 Alabama Street, would include 787.9 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-12)**.

2801 Alabama Street (Parcel 3-213)
The property acquisition at the intersection of Alabama and Ennis Streets, 2801 Alabama Street, would include 493.7 sf. behind the existing sidewalk for a widened sidewalk and a wheelchair ramp **(Figure 3-12)**.

3224 Ennis Street/2900 Holman Street, Blackshear Elementary School (Parcel 3-215 and 3- 216)
The Blackshear Elementary School (addresses appear as 3224 Ennis Street and 2900 Holman Street), 2900 Holman Street, would have a corner clip acquisition at the corner of Ennis and Holman Streets, in the amount of 9.5 sf. for a wheelchair ramp **(Figure 3-13).** The existing wheelchair ramp has a utility pole in it, and it would be relocated to public right-of-way as part of the BRT Project.

3115 Ennis Street (Parcel 3-297)
The property acquisition at the southwest corner of the intersection of Elgin and Ennis Streets, 3115 Ennis Street, would include a small triangle of 24.8 sf. behind the existing sidewalk (**Figure 3- 14**) for a sidewalk and a wheelchair ramp.

3.5.1.6 Eastwood Subdivision Historic District

The following section describes effects of the BRT Project within the Eastwood Subdivision Historic District (district). The BRT would enter the assumed NRHP-eligible Eastwood Historic District (the district) at Leeland/Lockwood and would travel north through the district in dedicated BRT lanes. These lanes would be primarily constructed within the existing right-of-way of Lockwood Drive, however, minor property acquisitions are needed to bring the existing sidewalks up to City of Houston design standards (**Figure 3-15**). One BRT Station would be located within the District. ROW acquisition is required on some properties, per the City of Houston Infrastructure Design Manual, to improve turning radii, safety sight distances at street intersections, provide sidewalks, and/or to provide wheelchair ramps at pedestrian crossings designed for ADA Compliance and would require partial acquisitions for strips of property along Lockwood Drive and/or at corners of properties. One general purpose lane in each direction would remain on Lockwood Drive.

Acquisitions within the district would primarily occur at street intersections of Lockwood Drive and the following cross streets: Clay, Polk, Woodside, Park, McKinney, Walker, and Rusk. In many cases, the acquisitions needed are "corner clips" that are to provide for a wheelchair ramp and bring the sidewalks to ADA compliance and City design standards. In other cases, strips of property acquisitions are needed along the front, back or side of a property to provide a wider sidewalk to meet the City design stations and to accommodate a safety buffer area between the curb and the sidewalk.

Partial strips of property acquisitions and/or corner clips would result in 0.12 acres being converted to transportation use out of approximately 135.8 total acres of the district. No buildings would be altered or demolished for these minor acquisitions and the acquisitions would not result in an adverse effect on the district or any individual contributing resources within the district. **Table 3-4** details the acquisitions within the district.

FTA determined there would be No Adverse Effect to the historic properties located within the Eastwood Historic District (listed in the following section). THC concurred with this determination. Based on THC's concurrence, FTA informed the THC of the agency's decision to make a *de minimis* impact determination under Section 4(f) for these acquisitions.

Table 3-4. Acquisitions from property within the NRHP-Eligible Eastwood Historic District

Figure 3-15: Acquisitions from property within the Eastwood Historic District

4501 Clay Street (Parcel 4-106)
The property acquisition to the eligible property at the at the intersection of Clay Street and Lockwood Drive, would include a small corner clip of 20 sf. for the sidewalk installation. **See Figure 3-16.**

4540 Polk Street (Parcel 4-107)
The property acquisition at the intersection of Polk Street and Lockwood Drive would include an acquisition of 1,694 sf. for a widened sidewalk and a wheelchair ramp. This property is currently vacant. **See Figure 3-16.**

4602 Polk Street (Parcel 4-018)
The property acquisition at the southeast intersection of Polk Street and Lockwood Drive to an eligible property, would include a small corner clip of 193 sf. for a wheelchair ramp. See **Figure 3-16.**

4543 A Polk Street (Parcel 4-108)
The property acquisition to the non-contributing resource at the northwest intersection of Polk Street and Lockwood Drive would include an acquisition of 351 sf. for a wheelchair ramp installation. **See Figure 3-16.**

4602 Woodside Street #6 (4-020)
The property acquisition at the southeast corner of Woodside Street and Lockwood Drive is to a non-contributing resource within the Eastwood Historic District. This property would require the acquisition of 141 sf. of a corner clip and strip impact for sidewalk improvements. **See Figure 3-17.**

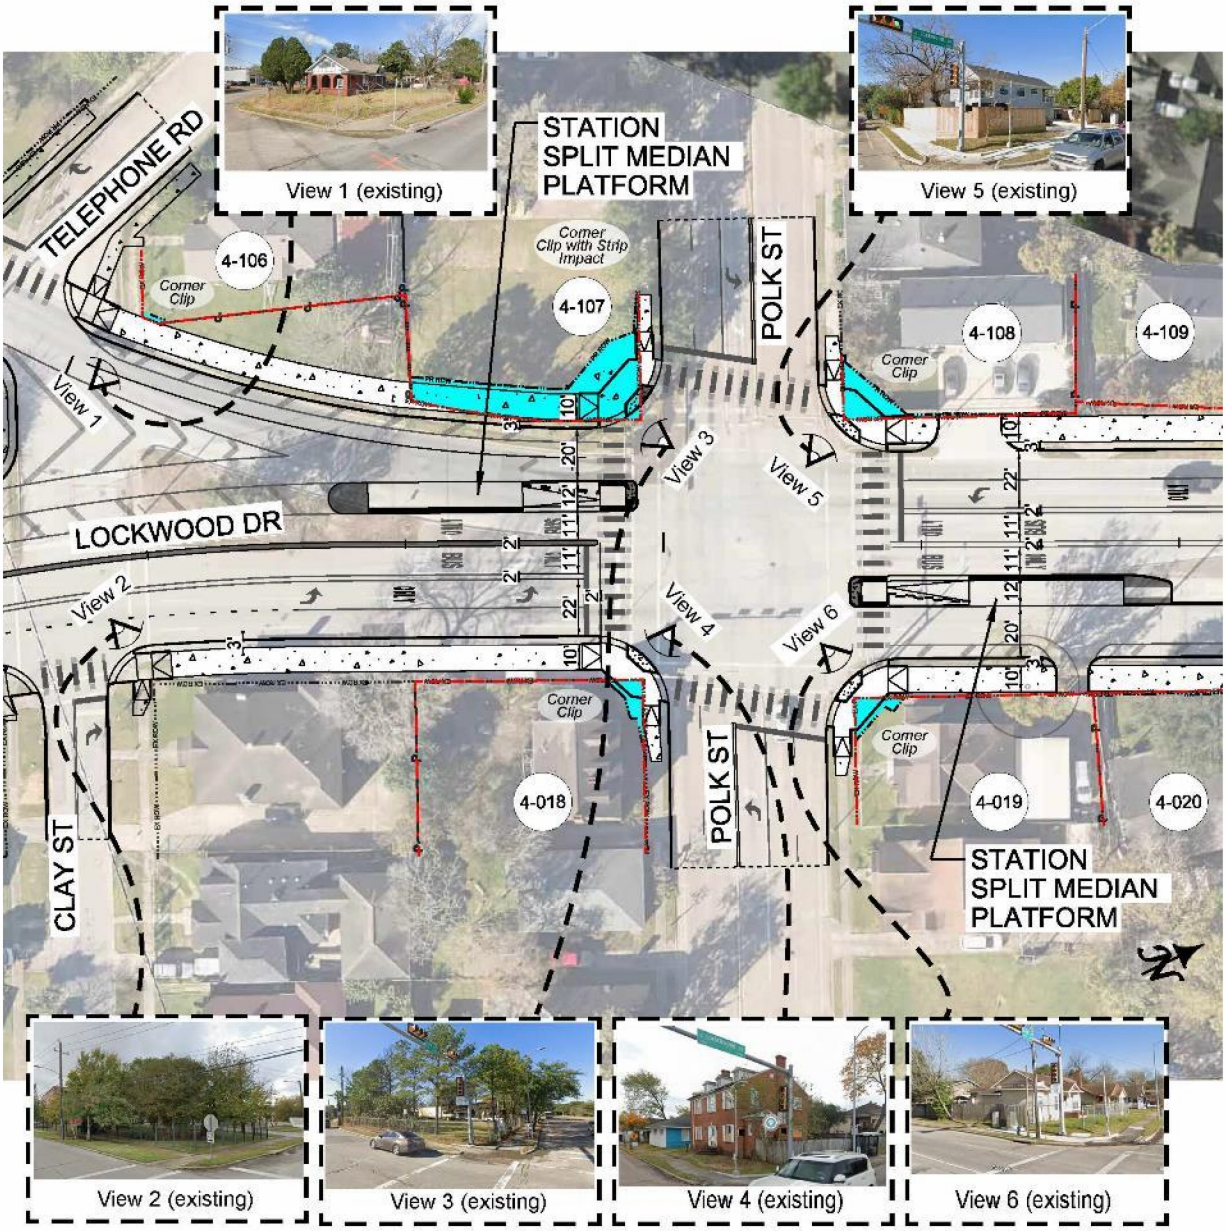
4550 Woodside Street (4-109)
The property acquisition at southwest corner of Woodside Street and Lockwood Drive to an eligible resource would 11 sf. for the installation of a wheelchair ramp. **See Figure 3-17.**

4547 Woodside Street (4-110)
The property acquisition at the northwest corner of Woodside Street and Lockwood Drive to an eligible resource would include the acquisition of 203 sf. for sidewalk improvements. **See Figure 3-17.**

4601 McKinney Street (4-026)
The property acquisition to the eligible property at the northeast corner of McKinney Street and Lockwood Drive intersection would include the acquisition of 206 sf. for a corner clip with a strip impact. **See Figure 3-18.**

4602 Walker Street #8 (4-027)
The property acquisition to the non-contributing property at the southeast corner of the intersection of Walker Street and Lockwood Drive would include a strip impact of 178 sf.. **See Figure 3-18.**

4540 McKinney Street #4 (4-114)
The property acquisition to the eligible property at the southwest intersection of McKinney Street and Lockwood Street would include the acquisition of 139 sf. for a corner clip with strip impact. **See Figure 3-18.**



4539 McKinney Street (4-115)
The property acquisition to the eligible property at the northeast corner at the intersection of McKinney Street and Lockwood Drive would require 827 sf. for a corner clip with strip impact for sidewalk and wheelchair ramp installation. **See Figure 3-18.**

4601 Walker Street (4-028)
The property acquisition to the eligible property at the southeast corner of Walker Street and Lockwood Drive would require a 246 sf. strip impact for sidewalk installation. **See Figure 3-19.**

4604 Rusk Street (4-029)
The property acquisition to the eligible property at the southeast corner of the intersection of Rusk Street and Lockwood Drive would require the acquisition of 276 sf. for the installation of a sidewalk. **See Figure 3-19.**

4545 Rusk Street (4-199)
The property acquisition to the non-contributing property at the northwest corner of Rusk Street and Lockwood Drive would include 422 sf. for installation of a sidewalk. **See Figure 3-19.**

4 Planning to Minimize Harm to Historic Districts

The Project would travel through two NRHP-eligible Historic Districts – the Third Ward Historic District and the Eastwood Historic District. FTA determined the minor acquisitions within the districts would represent a *de minimis* impact to these districts as acquisitions would be limited to small buffer strips and corner clips. In consultation with the THC, METRO committed to measures that would reduce effects on the districts. These measures are described in Sections 4.1 and 4.2.

4.1 Third Ward Historic District

The historic district covers roughly 750 acres. The removal of less than 3,000 sf. (.07 percent) of sidewalks for 22 parcels is nominal and would not be adverse. METRO has reviewed project designs to avoid effects within the Historic District. Reducing the project right-of-way will be further examined as the project design is refined.

The introduction of bus-shelters like BRT Stations would introduce a new visual element within the district that is not already present; however, the BRT Station designs will be completed in a manner to minimize visual effects to the district and will mimic the district's existing character and reflect on its history. METRO's arts-in-transit program and further design would integrate historic elements into the BRT Stations through community-chosen arts-in-transit selections, i.e., interpretive historic panels at stations and/or a cultural walk incorporated into sidewalks that symbolize the district's ethnic heritage. The BRT Project would not alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association; therefore, the Project would have no adverse effect to the historic district. METRO commits to the following conditions to minimize visual effects of the BRT lanes and underpass:

a) Station designs that mimic the neighborhood scale, architectural styles, and materials of the district (varied styles),
b) Historic interpretive panels that provide an educational opportunity on the history of the district's Ethnic Heritage/Jewish, Ethnic Heritage/Black, and Community Planning and Development to be identified with community input,
c) Replanting of trees in the buffer between the curb and the sidewalk at intervals recommended by the City of Houston Arborist and in accordance with the City's Tree Ordinance,
d) Public Outreach on station designs and METRO's arts-in-transit program to include a survey and a design workshop, and,
e) 30-day Consulting party design reviews of 60 percent plans.

4.2 Eastwood Historic District

Acquisitions within the district would primarily occur at street intersections of Lockwood Drive and the following cross streets: Clay, Polk, Woodside, Park, McKinney, Walker, and Rusk. In many cases, the acquisitions needed are "corner clips" that are to provide for a wheelchair ramp and bring the sidewalks to ADA compliance and City design standards. In other cases, strips of property acquisitions

are needed along the front, back or side of a property to provide a wider sidewalk to meet the City design stations and to accommodate a safety buffer area between the curb and the sidewalk.

Partial strips of property acquisitions and/or corner clips would result in 0.12 acres being converted to transportation use out of approximately 135.8 total acres of the district. No buildings would be altered or demolished for these minor acquisitions and the acquisitions would not result in an adverse effect on the district or any individual contributing resources within the district.

The BRT Project would not alter, directly or indirectly, any of the characteristics of a historic district that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. The BRT Stations, lanes, and underpass would be inserted into a streetscape that was previously altered by the expansion of Maplewood. These alterations modified the neighborhood by widening Maplewood from two to four lanes and making it a principal arterial and made permanent changes to the original plat in size, building orientations, and introducing new visual elements associated with a principal arterial. The intrusion of the new Lockwood Drive provided connections from the north and south, instead of the neighborhood's initial orientation to downtown to the west by streetcar.

The BRT Project would continue to provide transit service to the neighborhood, connect with the Greenline Light Rail on the north side of Harrisburg and provide an enhanced connection to a service that is similar to the Harrisburg Streetcar. The Project would provide enhanced transit resources and connections, reinforcing the neighborhood's preferred setting close to Downtown Houston. Therefore, the Project would have no adverse effect to the historic district. METRO commits to the following conditions to minimize visual effects of the BRT lanes and underpass:

a) Station designs that mimic and complement the neighborhood scale, architectural styles, and materials of the district (Craftsman Bungalow, the Four Square and Colonial Revival),
b) Historic interpretive panels that provide an educational opportunity on the history of the subdivision as a streetcar suburb, to be located with community input within the Project limits,
c) Incorporation of the community Eastwood neighborhood sign into either the station design or the two entrances of the district along Lockwood,
d) Minimizing the visual effects of the traffic barrier between the general-purpose lanes and the underpass, while maintaining safety requirements,
e) Minimizing the visual effects of the four-and-a-half-foot-tall flood berm by including decorative fencing and landscaping, and by including arts-in-transit designs based on community input,
f) Replanting of trees in the buffer between the curb and the sidewalk at intervals recommended by the City of Houston Arborist and in accordance with the City's Tree Ordinance,
g) Noise mitigation during construction,
h) Public Outreach on Polk Station designs and arts-in-transit program to include a survey and a design workshop, and,
i) 30-day Consulting party design reviews of 60 percent plans.

5 Coordination Activities with Officials with Jurisdiction

Correspondence with the OWJ for parks and historic resources is included in Appendix B. The following sections describe the coordination with HPARD for parks and recreation areas and with the THC for historic properties.

5.1 City of Houston Parks & Recreation Department

FTA and METRO coordinated with the HPARD over the city-owned Section 4(f) properties described in this report during development and evaluation of the preliminary alternatives and refinement of the Locally Preferred Alternative. METRO and HPARD reviewed the proposed design and potential Section 4(f) park and recreational area uses to minimize impacts on these resources and provide for increased accessibility to the parks. HPARD supports the sidewalk improvements and have provided a letter concurring with FTA's *de minimis* impact determination for Mandell, Peggy, and Diez Parks. HPARD also confirmed that Peggy's Point Plaza is no longer significant and is being sold and transferred from park ownership.

5.2 Texas Historical Commission

FTA and METRO consulted with the THC to complete the identification and effects determinations of the project on historic properties within the APE. Consulting parties and tribes were invited to consult throughout the process. The *Historic Survey Report* and *Historic Survey Report Addendum* were provided to consulting parties and comments were solicited in writing and during a consulting party meeting held on June 1, 2023 and throughout the review and comment period (June 1 - July 1 and August 14 – September 14). The THC concurred with FTA's Determinations on Eligibility and that there would be No Adverse Effects to the historic properties and/or districts. FTA thereby informed the THC of the agency's intent to issue a *de minimis* impact determination under Section 4(f).

FTA and METRO also coordinated with the THC and Project RESPECT (a non-profit cemetery management organization), relative to the Evergreen Cemetery. This coordination is described in detail in the Archaeological Survey Report and the Work Plan. As the THC asked FTA to treat the Evergreen Negro Cemetery as an NRHP eligible resource, the THC serves as the OWJ. Representatives of Project RESPECT attended the June 1st, consulting party meeting and the September urban design workshops. THC concurred with FTA's Determinations of Eligibility and that there would be No Adverse Effects to historic properties. FTA thereby informed the THC of the agency's intent to issue a *de minimis* impact determination under Section 4(f).

RE: METRORapid University Corridor Project – Official with Jurisdiction Consultation

Dear Mr. Harbert:

This letter is in response to our coordination and your request regarding the concurrence regarding following four park properties, Mandell Park, Peggy's Point Plaza Park, Peggy Park, and Diez Street Park and the METRORapid University project.

Coordination

METRO coordinated with HPARD staff in a meeting on May 22, 2023, regarding four park properties: Mandell Park, Peggy's Point Plaza Park, Peggy Park, and Diez Street Park where sidewalk and Americans with Disabilities Act (ADA) improvements are needed to meet COH sidewalk design requirements. During this meeting, METRO presented illustrations of improvements planned at Mandell Park, Peggy's Point Plaza Park, Diez Park and Peggy Park.

HPARD explained that the improvements could be made with a Right of Entry for METRO's Contractor as part of the construction activities for the Project for three parks: Mandell Park, Peggy Park, and Diez Street Park. METRO coordinated with HPARD attorneys and HPARD attorneys concluded that because no change in property ownership occurs; the proposed improvements will be minor to comply with the City sidewalk requirements; and will result in overall access improvement to the parks, Texas Chapter 26 requirement are not applicable to the proposed enhancement to the park properties. The parks will continue to function for its intended purposes and the COH will retain ownership of the property. METRO will also coordinate with COH Forestry Department for any tree removals and/or relocations that may occur with respect to these three parks.

The remaining park resource, Peggy's Point Plaza Park, is in the process of being decommissioned by HPARD and the City is preparing to host a Chapter 26 public hearing providing the state-required notification. The decommission of the park is expected to occur prior to 60 percent engineering plans (2024). Given that the park is scheduled to be decommissioned, the park is not considered a significant resource by the OWJ and is, therefore, not considered a resource afforded protection under Section 4(f).

Federal Regulations - Section 4(f) Regulation

Section 4(f) is a federal regulation (23 CFR 774) that applies to any U.S. Department of Transportation (DOT)- funded projects where a "use" of a Section 4(f) property[1], is planned. Section 4(f) only applies to "significant" publicly-owned parks and recreation areas that are open to the public. Significance for parks, recreation areas, and wildlife/waterfowl refuges is determined by the OWJ, in this case the HPARD, and must apply for the entirety of the resource to be considered significant.

A permanent, temporary, or constructive use can only be approved if there is no feasible and prudent avoidance alternative and that the action has included all possible planning to minimize harm to the Section 4(f) property. FTA can make a *de minimis* determination if an impact is so minor as to not adversely affect the features, attributes or activities that qualify the property protection under Section 4(f).

The construction activities that would occur to make sidewalk and ADA improvements at Mandell Park, Peggy Park, and Diez Street Park will be minor and will be a *de minimus*. The METTRORapid University project will not adversely affect the activities, features or attributes that make the property eligible for Section 4(f) protection. In addition, the COH has determined that Peggy's Point Plaza Park is no longer considered significant.

As the Official with Jurisdiction over Mandell Park, Peggy's Point Plaza Park, Peggy Park, and Diez Street Park, I understand and concur that:

- Houston METRO's Construction Contractor will be provided Right of Entry to complete the temporary construction activities associated with the University BRT Project to accommodate a shared use path/sidewalk and ADA improvements at Mandell Park, Peggy's Point Plaza Park, and Diez Street Park. Construction impacts will be *de minimis* as defined herein and will result in improved sidewalks and pedestrian/bicycle access to the parks; and,
- Peggy's Point Plaza Park is not a significant park resources for the Houston Parks and Recreation Department and the City intends to decommission the park prior to final design plan completion.
-

Sincerely,

Re: METRORapid University Corridor Project – Official with Jurisdiction Consultation

Dear Mr. Allen:

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in Harris County, Texas in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion (CE) is being prepared as part of this process. FTA is the Federal Lead Agency and METRO is the Local Project Sponsor responsible for implementing the Project. METRO has prepared this correspondence to seek concurrence from City of Houston Parks and Recreation Department (HPARD) as the Official with Jurisdiction (OWJ) over parks and recreation resources within the City.

Proposed METRORapid University Corridor Project

The Project is a proposed 25.3-mile bus rapid transit (BRT) line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston (COH). The project also proposes to provide a shared use pedestrian and bicycle path adjacent to the BRT and generally within COH street ROW as required by City of Houston. The Project is divided into five segments as shown in **Table 1. Figure 1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects and major activity centers along its path.

Table 1 University Corridor Segments		
Segment	From	To
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Dr
2	Westpark Dr 1,500 feet east of UPRR tracks, east of Newcastle Dr	Richmond Ave at US-59
3	Richmond Ave at US-59	Elgin St at I-45 (Eastwood Transit Center)
4	Elgin St at I-45 (Eastwood Transit Center)	Lockwood Dr at Margarita St.
5	Lockwood Dr at Margarita St.	Tidwell Transit Center

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

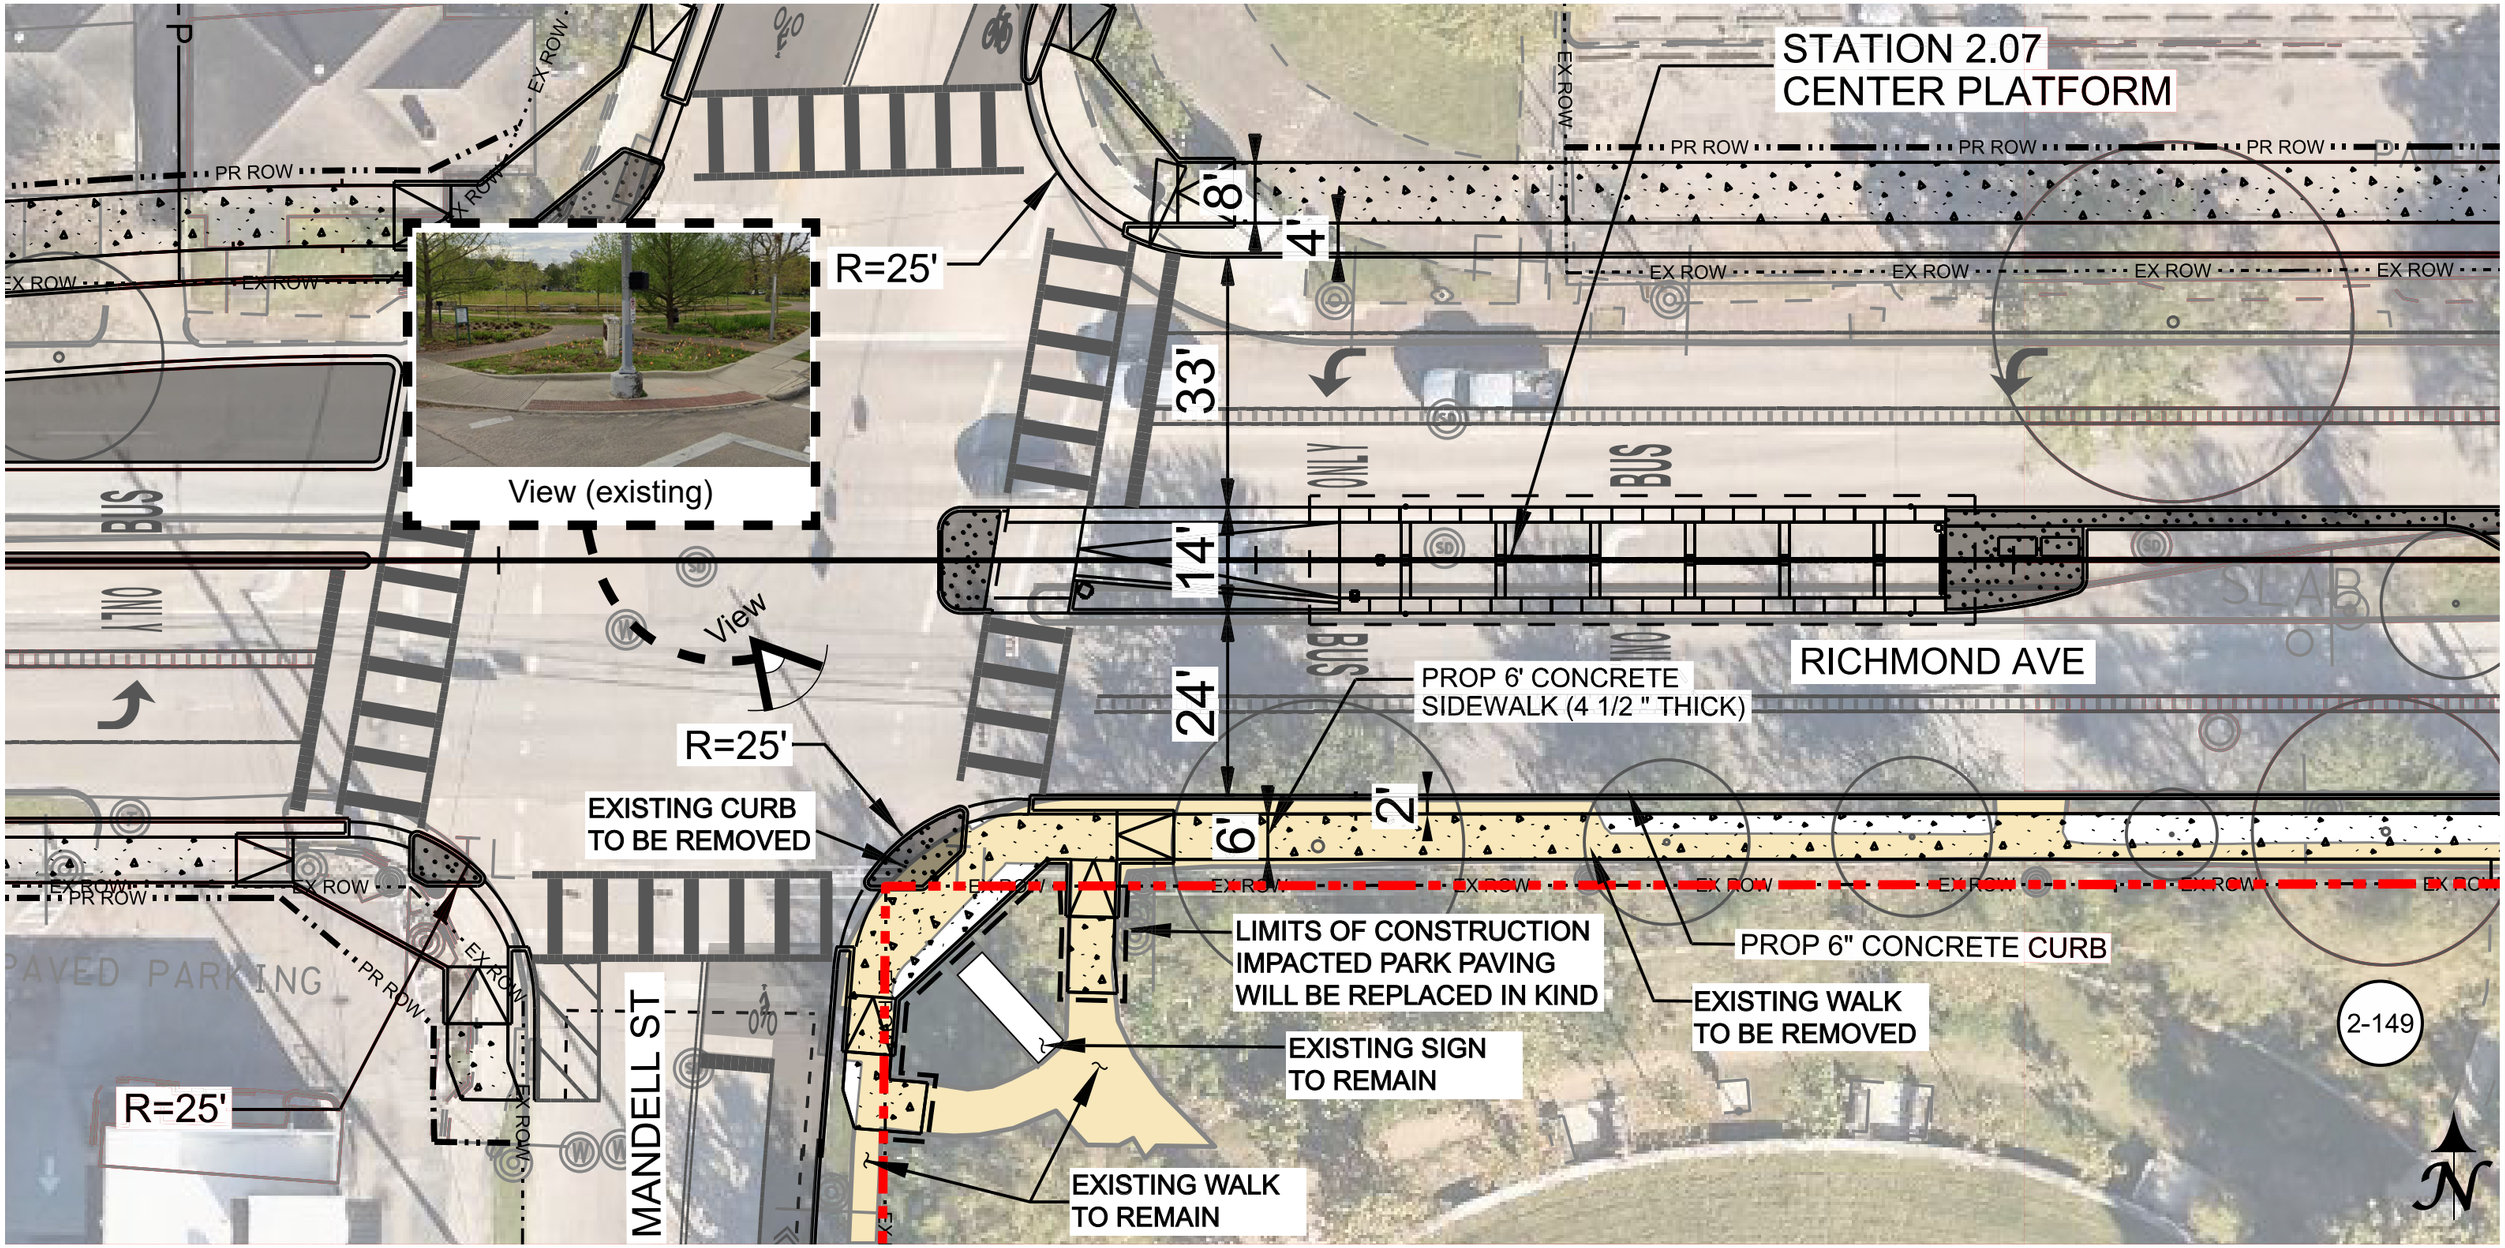
Coordination and Concurrence Request

METRO coordinated with HPARD staff in a meeting on May 22, 2023, regarding four park properties: Mandell Park, Peggy's Point Plaza Park, Peggy Park, and Diez Street Park where sidewalk and Americans with Disabilities Act (ADA) improvements are needed to meet COH sidewalk design requirements. During this meeting, METRO presented illustrations of improvements planned at Mandell Park, Peggy's Point Plaza Park, Diez Park and Peggy Park (see **Attached**).

METRO is seeking written concurrence from HPARD/COH that the construction activities that would occur to make sidewalk and ADA improvements at Mandell Park, Peggy Park, and Diez Street Park will not adversely affect the activities, features or attributes that make the property eligible for Section 4(f) protection and that these will be minor and will be a *de minimus*.

In addition, METRO would like to confirm in writing the COH has determined that Peggy's Point Plaza Park is no longer considered significant.

METRO will make your signed letter part of the Section 4(f) record for the Project and your concurrence will be presented to FTA as part of our CE submission. Your prompt response is appreciated. We look forward to continuing to work with HPARD as the Project moves forward.



Sincerely,

Clint B. Harbert, AICP

LICENSE AGREEMENT
(GOVERNMENTAL LICENSEE)

License No. 2500130

This License Agreement (the "**Agreement**") is entered into effective as of June 10, 2005 (the "**Effective Date**"), by and between **METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY, TEXAS**, a public body corporate and politic organized and existing under Ch. 451 TEX. TRANSPORTATION CODE ("**Licensor**"), and **HARRIS COUNTY, TEXAS**, a body corporate and politic under the laws of the State of Texas ("**Licensee**"), upon the following terms and conditions:

1. Beginning on the Effective Date of this License Agreement and continuing from day to day until terminated by either party as provided below, Licensor hereby consents to and permits Licensee to use, at Licensee's sole expense and risk, that certain tract of real property (the "**Property**") more particularly described on **Exhibit A** attached hereto and made a part hereof for all purposes, solely for the following purpose: **temporary public dog park operated by Licensee**. Licensee, and any employee, contractor, licensee or invitee of Licensee or other member of the general public entering the Property by, through or under Licensee's rights hereunder, shall be considered a trespasser on the Property for any use of the Property other than the foregoing.

2. Without limiting anything contained in this Agreement, **Licensee knowingly and voluntarily assumes any and all risks, known and unknown, which may arise from the use of the Property pursuant to this Agreement, and its right to use the Property is AS IS, WITH ALL FAULTS. Licensee specifically agrees that it will not seek reimbursement, damages or any other kind of compensation from Licensor, nor make any claims whatsoever against Licensor, and that Licensor shall have no liability to Licensee for any loss, cost, damages, bodily injuries or death.**

3. Consideration for this Agreement and the license granted hereunder (collectively, the "**License**") to use the Property for the purposes indicated above consists of Licensee's undertaking and performing all obligations of Licensee under the terms, provisions, covenants and conditions set forth herein at no cost to Licensor. This License is granted by Licensor to Licensee on such terms, provisions, covenants and conditions in the interest of interlocal governmental cooperation between the parties hereto, and Licensor acknowledges that Licensee's operation and maintenance of the Property in accordance herewith assists Licensor's governmental function of preserving the Property on an interim basis as part of a transit corridor for future development of Licensee's transit project referred to in Exhibit C attached hereto. Accordingly, Licensor's customary User Fees and all cash consideration are hereby expressly waived by Licensor.

4. The License may be terminated by either party hereto at will, at any time and for any reason or for no reason, upon ninety (90) days prior written notice to the other party. Unless Licensor gives Licensee its prior written consent to abandon in place any of

Licensee's personalty, fixtures, equipment, pavement, piping, lighting, excavations, fences and other buildings, structures or facilities on the Property (collectively, the "**Personalty**"), no later than the date of such termination of the License, Licensee will, at no cost to Licensor, remove the Personalty and restore the Property to the condition in which it existed prior to the Effective Date hereof, including but not limited to removal of subsurface foundations and refilling of excavations. No termination of the License shall release Licensee from any liability which may have attached or accrued, nor from any obligation contained in this Agreement, prior to the date of such termination.

5. Licensee shall have no right:

(a) to own, operate, maintain, or allow to exist any Personalty of Licensee on the Property in an unsafe, unsightly, or dysfunctional condition nor in any other manner causing any material interference with the Licensor's use and enjoyment of the Property;

(b) to maintain any of its Personalty on the Property in a manner that does not comply with all applicable requirements of federal, state or municipal laws, regulations, codes, ordinances and governmental rules or judicial orders applicable thereto;

(c) to cause or permit any spill, release, emission or discharge of Hazardous Materials, as defined herein, on or from the Property caused by Licensee or its contractors, subcontractors, agents, or employees while in the course and scope of business or employment of or for Licensee, to remain on any of Licensor's lands in such a manner as to cause the said Licensor's lands to be in a condition other than the condition in which they existed immediately prior to such spill, release, emission or discharge of Hazardous Materials. As used herein, "**Hazardous Material**" means any waste, chemicals, materials or substances defined as hazardous materials, hazardous wastes, hazardous substances, contaminants, pollutants or toxic substances under any applicable health, safety or environmental law; or

(d) to cause or permit any public or private, temporary or permanent, nuisance to occur on the Property. .

6. **Licensee hereby releases Licensor from and against and hereby waives all claims against Licensor for all claims, suits, liabilities, damages, penalties, losses, costs and expenses (including reasonable attorneys' fees incurred by Licensee in connection therewith) for any bodily injury or death or damage or destruction of any property of Licensee arising directly or indirectly out of the use of the Property pursuant to this License, or any violation or breach of this License, by Licensee.**

7. Intentionally deleted.

8. This License is personal to Licensee and the consideration provided for herein is accepted by Licensor solely in recognition of intergovernmental cooperation with Licensee

specifically, and no other public or private person or entity. Accordingly, this License shall not be assigned or transferred, in whole or in part, by Licensee. Licensee will not grant or permit encumbrances or mechanics' liens to be placed upon the Property or the License. Any attempted assignment, pledge, or transfer in violation of this paragraph shall be void. Licensor shall continue to possess and enjoy all ownership rights in and to the Property, and Licensee acknowledges that Licensee has no leasehold, easement or other interest in real property as to the Property. Licensor shall have the right to enter upon the Property at all times, and for any reason. The License granted herein is non-exclusive.

9. **This Agreement contains the special provisions set forth in Exhibit C attached hereto, all of which are incorporated herein and made a part hereof for all purposes by reference thereto.**

10. Any notice, consent or other communication required or permitted by this Agreement shall be in writing and shall be deemed sufficiently given if delivered personally or sent by certified mail, return receipt requested, postage prepaid, to the address provided below for each party, or to any other address as either party may hereafter advise the other party in accordance with this paragraph. Any such notice, consent or communication shall be deemed to have been given as of the date so delivered, if delivered personally, or two (2) business days after the date the same is deposited in the United States mail.

11. No waiver by Licensor of any provision of this Agreement shall be effective unless in a written document duly signed by both parties hereto, and no such waiver shall constitute a waiver of any other provision or a subsequent breach of the same provision. No amendment to this License shall be effective unless and until set forth in a written document and duly signed by both parties. This License is not intended nor shall it be construed as creating any rights in or for the benefit of the general public, nor shall it create or grant any rights regarding any real property outside of the Property.

EXHIBIT A

LEGAL DESCRIPTION OF PROPERTY

That certain parcel of land, containing approximately 5.5 acres of land, more or less, located in Harris County, Texas, and being out of that certain tract of land commonly known as the Westpark Corridor, described in instrument filed for record under County Clerk's File No. P023668, Real Property Records, Harris County, Texas, and said out-parcel being more particularly described as follows:

A tract of land, 100 ft. wide and approx. 2,400 ft. long, beginning at the Westerly right of way line of Newcastle Drive and extending westward to the Easterly right of way line of West Loop South (including the northbound frontage road thereof).

EXHIBIT B

Intentionally deleted.

EXHIBIT C

SPECIAL PROVISIONS TO LICENSE AGREEMENT

The following special provisions are hereby made a part of the foregoing License Agreement. All capitalized terms used herein shall have the definitions set forth in the foregoing License Agreement for such terms.

1. Licensee hereby acknowledges, stipulates and agrees that (i) the Property is a portion of Licensor's transit corridor, (ii) as of the Effective Date hereof Licensor is planning to develop a transit project in the Westpark Corridor (as referred to in **Exhibit A** attached to this Agreement), including but not limited to the Property, within the next two (2) to five (5) years after the Effective Date, (iii) **the License will be terminated by Licensor within the next two (2) to five (5) years after the Effective Date in connection with commencement of work by or on behalf of Licensor relating to the development of such transit project**, (iv) any excavations, pavement, fences, structures (including subsurface foundations and structures) and other Personalty installed or constructed on the Property will interfere with Licensor's transit project and transit facilities and shall be removed by Licensee no later than the 90th day following notice of termination, and (v) Licensee's right to use the Property as a type of public park is temporary in nature and is expressly made subject to Licensor's right to terminate this License.

2. No later than thirty (30) days after either party hereto gives (or is deemed to have given) its 90-day notice of termination to the other party hereto, Licensee shall close the Property to the public and prohibit any further use of the Property for the purpose permitted in Section 1 of this Agreement; and no later than the termination date specified in such 90-day termination notice, Licensee shall complete the removal of all Personalty (including but not limited to any subsurface foundations installed by Licensee) from the Property and the restoration of the Property (including but not limited to the removal of any pavement and refilling, compacting and resurfacing any excavations therein installed by Licensee) to the condition in which it existed prior to the Effective Date.

3. This License is granted subject to all easements, leases, licenses, agreements and other matters in existence in or on the Property as of the Effective Date, appearing of record in Harris County, Texas, visible on the ground, or of which Licensor has given Licensee notice, including but not limited to the unrecorded licenses and agreements affecting the Property listed in Exhibit D attached hereto. Licensee shall not damage or interfere with, or permit any employee, contractor, licensee or invitee of Licensee or any other members of the general public entering the Property pursuant to the License to damage or interfere with, the rights and facilities of such pre-existing easements, licenses and other matters.

4. Licensee shall at all times keep the entire Property enclosed by fences with double-gated entries; provided, however, that where at-grade public or private streets or driveways cross the Property, no fences or gates shall be permitted to cross such streets, and the portion of the Property on each side of any such street or driveway shall be enclosed by such fences. All Personalty, including but not limited to all gates, fences and pavement,

shall be wheelchair accessible and otherwise compliant with all requirements of the Americans with Disabilities Act.

5. Licensee shall have exclusive responsibility for operating and maintaining the Property in a safe and prudent manner, at no cost to Licensor, in furtherance of which obligation, Licensee shall adopt, post and publicize, and consistently enforce reasonable rules relating to the use of the Property as a temporary public dog park, including but not limited to rules protecting the health, safety and property of the persons and animals using the Property, the health, safety and property of the owners of land abutting the Property, and the sanitation and environmental compliance of the Property.

6. Notwithstanding the last sentence of Section 5 of the foregoing License Agreement, Licensor and Licensee each hereby expressly stipulates, acknowledges and agrees that the Property will be used as a temporary public dog park and that it is expected that animal wastes will be deposited and temporarily stored on the Property; provided, however, that Licensor's agreement to allow the foregoing is conditioned upon Licensee's express obligation, at its sole cost and expense, to (i) install and stock on a daily basis dispensers of bags or other means for human users of the Property to collect animal waste, (ii) install and thereafter clean out on a daily basis receptacles for the disposal of animal waste, (iii) police the grounds of the Property on a daily basis and otherwise take all measures reasonably necessary to avoid the accumulation of animal waste on the Property, to avoid the release of animal waste into any ditches or other watercourses or onto any property adjacent to the Property and to avoid offensive odors developing on or emanating from the Property.

7. Licensor shall install signage on the Property that shall (i) recognize Licensor and Licensee's joint cooperation in providing and developing the Property as a public dog park, (ii) post Licensee's rules relating to the use of the Property, as described in Section 5 of this Exhibit C, and (iii) provide that any complaints, questions or other comments relating to the maintenance, repair, operation or use of the Property, and any notice of emergencies occurring on or around the Property, shall be directed to Licensee or third persons but not to Licensor.

8. Licensee shall be permitted to plant trees and other landscaping on the Property provided that all such trees and landscaping (including root balls) are removed from the Property as required by Section 2 of this Exhibit C.

9. In any fiscal year of Licensee after the Effective Date, if Licensee fails to appropriate adequate funding for its full and timely performance of all of its obligations hereunder, Licensor shall have the right to deem such failure to appropriate funds to be a 90-day notice of termination hereunder by Licensee.

THE STATE OF TEXAS §
§
COUNTY OF HARRIS §

The Commissioners Court of Harris County, Texas, convened at a meeting of said Court at the Harris County Administration Building in the City of Houston, Texas, on the ____ day of JUN 07 2005 2005, with the following members present, to-wit:

Robert Eckels	County Judge
El Franco Lee	Commissioner, Precinct No. 1
Sylvia R. Garcia	Commissioner, Precinct No. 2
Steve Radack	Commissioner, Precinct No. 3
Jerry Eversole	Commissioner, Precinct No. 4

and the following members absent, to-wit: None, constituting a quorum, when among other business, the following was transacted:

ORDER AUTHORIZING THE COUNTY JUDGE TO EXECUTE A LICENSE AGREEMENT BETWEEN METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY, TEXAS AND HARRIS COUNTY, FOR A DOG PARK LOCATED IN HARRIS COUNTY, TEXAS

Commissioner Radack introduced an order and made a motion that the same be adopted. Commissioner Eversole seconded the motion for adoption of the order. The motion, carrying with it the adoption of the order, prevailed by the following vote:

	Yes	No	Abstain
Judge Robert Eckels	☑	☐	☐
Comm. El Franco Lee	☑	☐	☐
Comm. Sylvia R. Garcia	☑	☐	☐
Comm. Steve Radack	☑	☐	☐
Comm. Jerry Eversole	☑	☐	☐

The County Judge thereupon announced that the motion had duly and lawfully carried and that the order had been duly and lawfully adopted. The order thus adopted follows:

WHEREAS, Harris County is desirous of operating the premises located in the vicinity of Westpark in Harris County, Texas as a dog park; and

WHEREAS, Metropolitan Transit Authority of Harris County, Texas, is desirous of licensing the premises to Harris County for use as a dog park;

NOW, THEREFORE, BE IT ORDERED BY THE COMMISSIONERS COURT OF HARRIS COUNTY, TEXAS, THAT:

Section 1: The recitals set forth in this Order are true and correct.

Section 2: The Harris County Judge is hereby authorized to execute for and on behalf of Harris County a License Agreement by and between Metropolitan Transit Authority of Harris County, Texas, and Harris County, said License Agreement being incorporated herein by reference and made a part hereof for all intents and purposes as though fully set forth herein word for word.

Section 3: All Harris County officials and employees are authorized to do any and all things necessary or convenient to accomplish the purpose of this Order.

Section 4. The prior order of the Court dated May 10, 2005 authorizing a lease of the property by Harris County is superseded by this order and such prior order is declared null and void.

Re: Project Review under Section 106 of the National Historic Preservation Act and/or the Antiquities Code of Texas
THC Tracking #202312315
Date: 09/08/2023
MetroRapid University BRT Corridor Project (Permit 30784)
1301 Fannin Street

Description: Response to THC Comments from 6/29/2023

Dear Sharyn LaCombe:
Thank you for your submittal regarding the above-referenced project. This response represents the comments of the State Historic Preservation Officer, the Executive Director of the Texas Historical Commission (THC), pursuant to review under Section 106 of the National Historic Preservation Act and the Antiquities Code of Texas.

The review staff, led by Justin Kockritz, Emily Dylla and Jonathan Moseley, has completed its review and has made the following determinations based on the information submitted for review:

Above-Ground Resources

- Property/properties are eligible for listing or already listed in the National Register of Historic Places.
- THC/SHPO concurs with information provided.

Archeology Comments

- THC/SHPO concurs with information provided.

We have the following comments: The THC History Programs Division, led by Justin Kockritz has completed its review of the Historic Resources Survey Addendum and concurs that the Eastwood Historic District is eligible for listing in the National Register of Historic Places at the local level of significance under Criterion A for its historic associations with community planning and development and Criterion C for it architecture, and that the proposed National Register boundaries appear to be appropriate. We also concur that Lockwood Drive (formerly Maplewood Avenue) was widened and the medians were added after the historic district's period of significance; thus, the existing medians would be considered non-contributing resources to the historic district.The THC Division of Architecture, led by Jonathan Moseley, has completed its review of the Historic Resources Survey Addendum and also concurs that the Eastwood Historic District is eligible for listing in

the National Register of Historic Places at the local level of significance under Criterion A for its historic associations with community planning and development and Criterion C for its architecture. We also concur that Lockwood Drive's (formerly Maplewood Avenue) widening, and medians were constructed post period of significance. As such they would be considered non-contributing elements to the districts.

We look forward to further consultation with your office and hope to maintain a partnership that will foster effective historic preservation. Thank you for your cooperation in this review process, and for your efforts to preserve the irreplaceable heritage of Texas. If the project changes, or if new historic properties are found, please contact the review staff. If you have any questions concerning our review or if we can be of further assistance, please email the following reviewers: justin.kockritz@thc.texas.gov, emily.dylla@thc.texas.gov, Jonathan.Moseley@thc.texas.gov.

This response has been sent through the electronic THC review and compliance system (eTRAC). Submitting your project via eTRAC eliminates mailing delays and allows you to check the status of the review, receive an electronic response, and generate reports on your submissions. For more information, visit http://thc.texas.gov/etrac-system.

Sincerely,

for Mark Wolfe, State Historic Preservation Officer
Executive Director, Texas Historical Commission

WHAT IS URBAN DESIGN?

With collaboration, **Urban Design** creates the look, the feel and the function of public spaces.

METRO Urban Design Manual directs places to be:

Accessible

Safe

Comfortable

Convenient

Enjoyable

Scan here to read the
Urban Design Manual

METRO

Community Design Workshops | 2023

PURPOSE OF THIS WORKSHOP

Collaborate with you to **envision your public right-of-way** for:

A comfortable pedestrian corridor

Landscaped and shaded corridor

Corridor amenities

Design the pedestrian corridor with your preferred neighborhood amenities.

Illustrations for representational purposes only. Preliminary and subject to change based on public input and technical review.

METRO

COLLABORATING TO CREATE A VISION

Four Lenses for Urban Design from the METRO Urban Design Manual

ENVIRONMENTAL RESILIENCE

Integrate elements that consider:

- Stormwater management
- Energy consumption
- Light pollution reduction
- Design elements to mitigate the impacts of heat island effect through green infrastructure, shelters and shade canopy
- Preserve trees

DIVERSE COMMUNITIES

Celebrate community identity with:

- Art opportunities
- Language diversity
- Accessible communication

SUSTAINABLE DEVELOPMENT

Support

- Multi-modal connections
- Bicycle and other micro-mobility choices
- Transit oriented spaces

CUSTOMER EXPERIENCE

Promote

- A positive travel experience
- Position transit as a preferred mode of travel with a strong focus on safe, clean and reliable services

Illustrations for representational purposes only. Preliminary and subject to change based on public input and technical review.

Community Design Workshops | 2023

ACCESSIBILITY IMPROVEMENTS AT PARKS

As part of the METRORapid University Corridor Project, METRO will be building sidewalks and ADA improvements at three City of Houston parks where the project passes: Mandell Park, Peggy Park, and Diez Street Park.

The City of Houston Parks and Recreation Department's (HPARD) acknowledges the overall benefit of the project results in "improved sidewalks and pedestrian / bicycle access to the parks". It is part of the federal process to notify the public of any changes to Park Property.

PEDESTRIAN ENVIRONMENT

PEDESTRIAN REALM

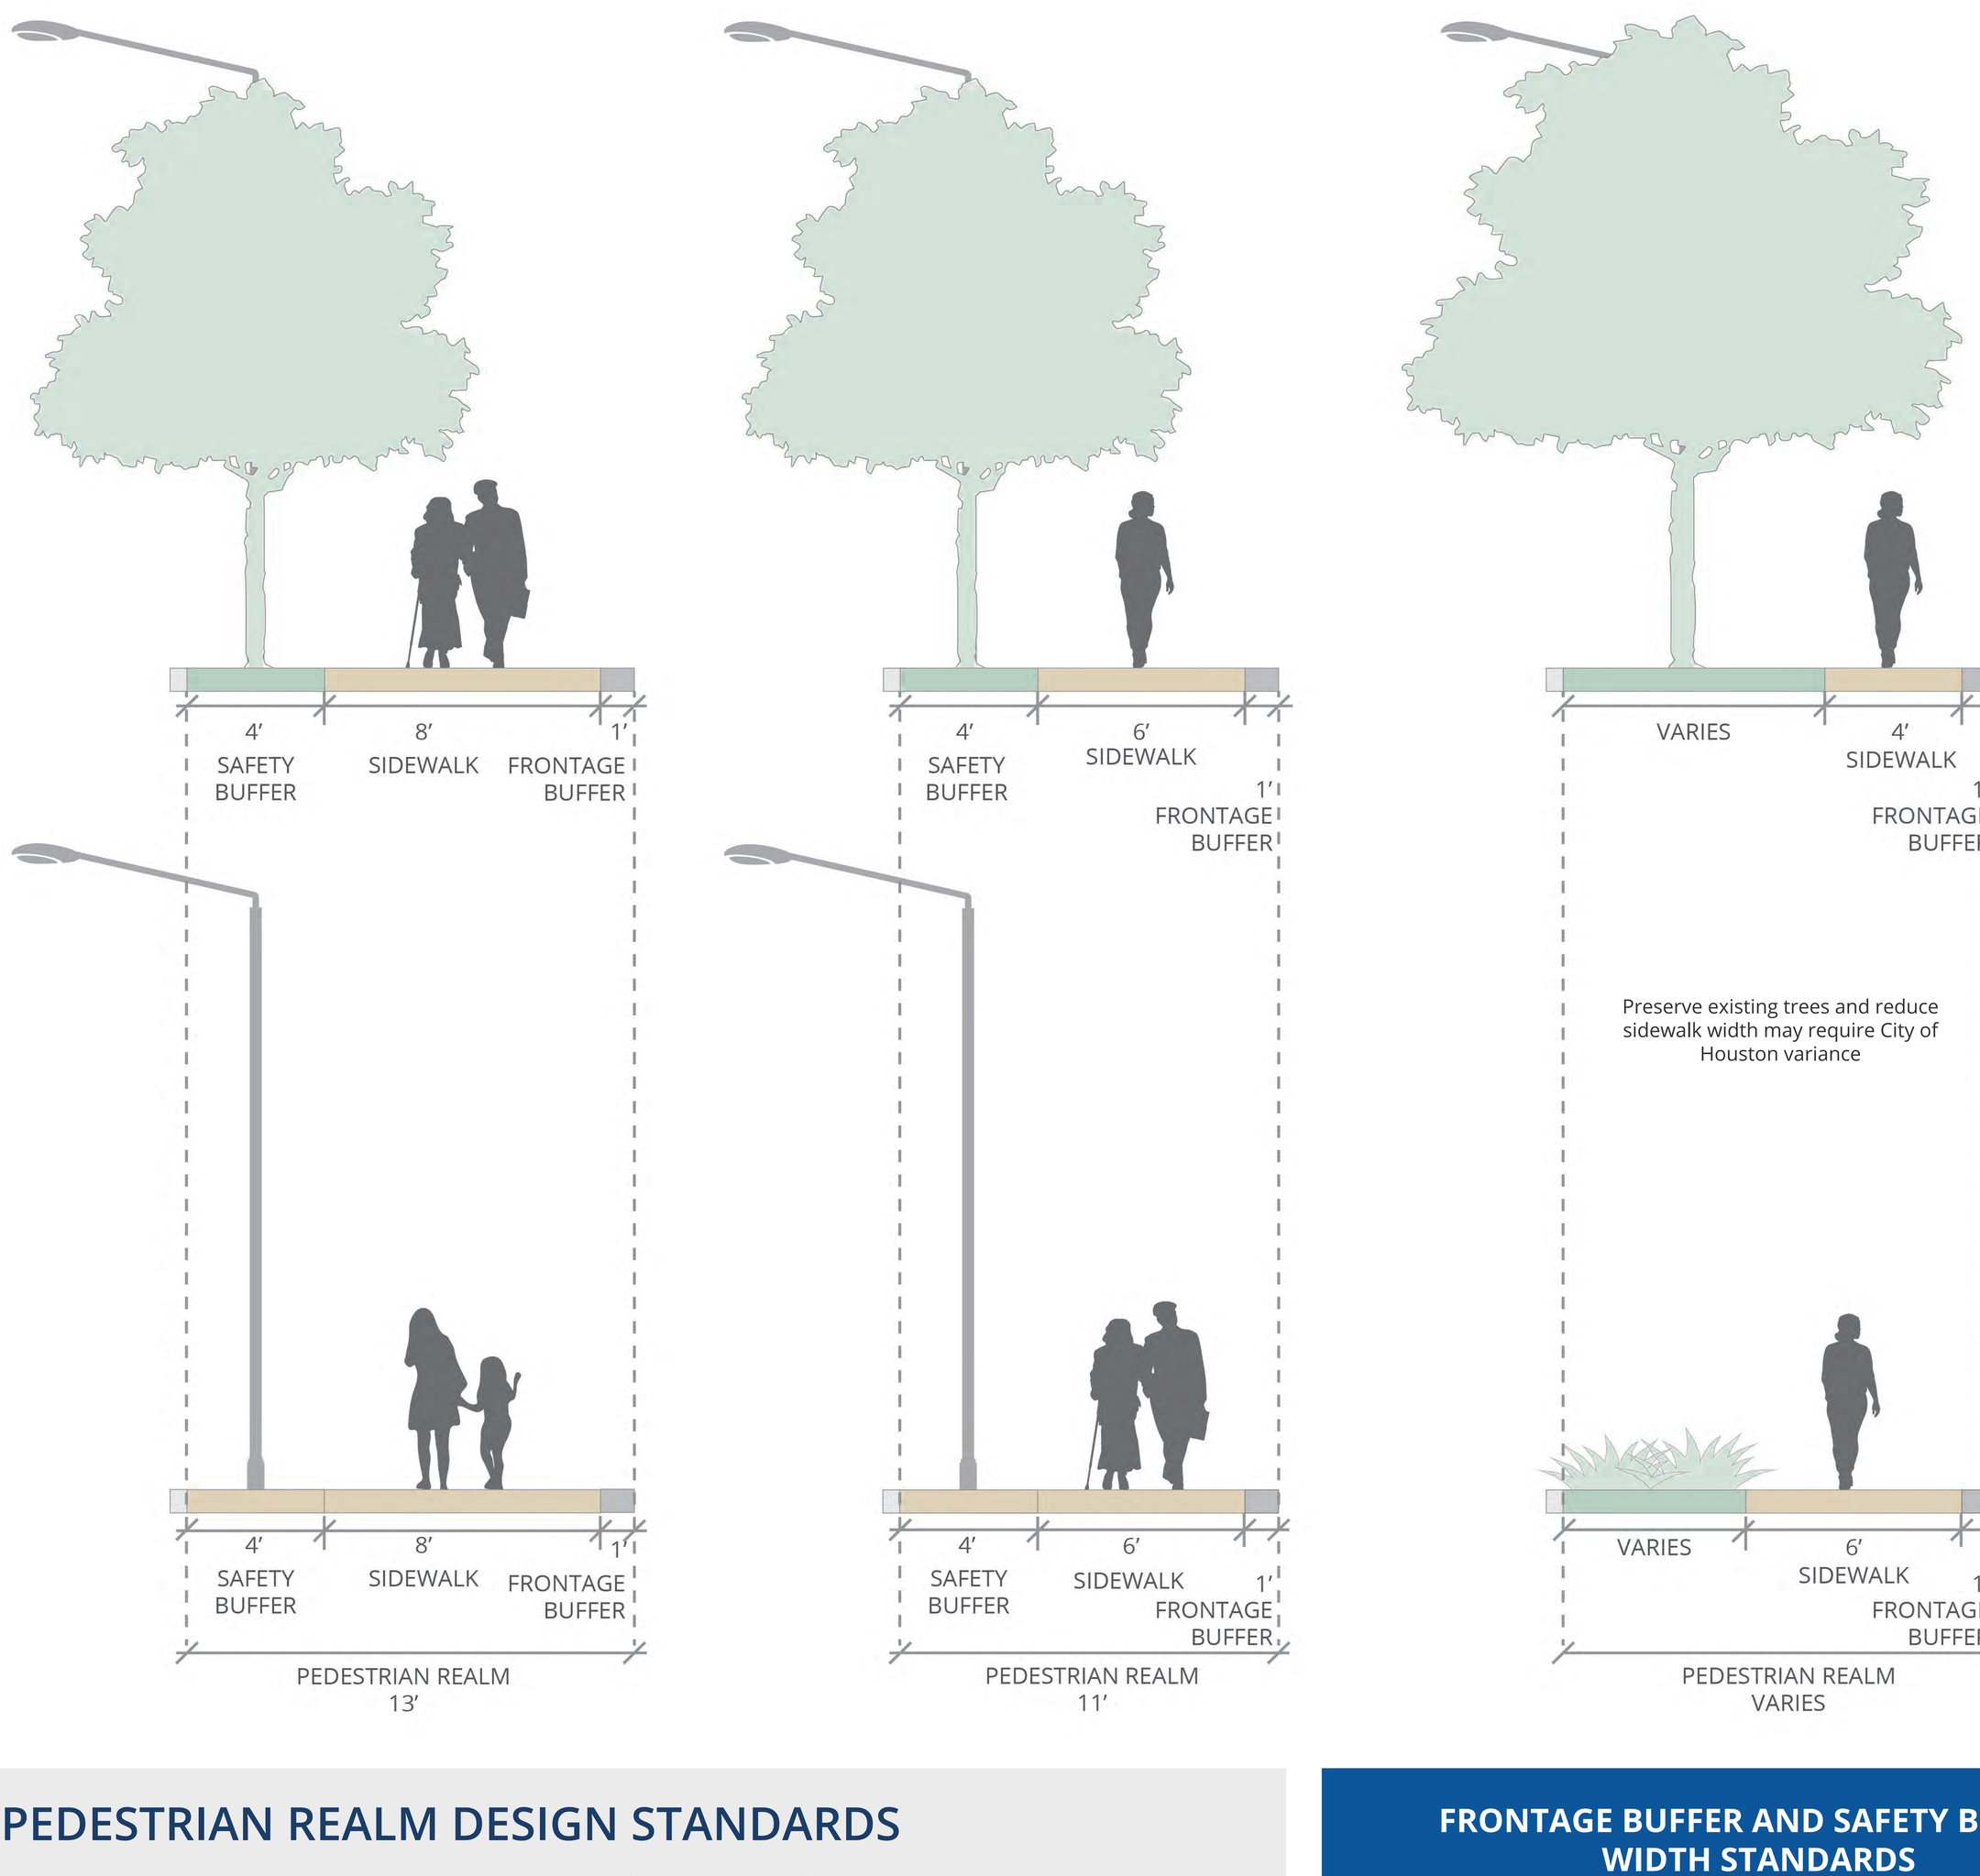
City of Houston *Users' Guide for Walkable Places* and *Transit-Oriented Development (Walkable Places)* - September 2020, indicates Pedestrian Realm as a Key Element and defines it as the area between the back-of-curb (BOC), or the edge of a streets pavement, and the ground floor building facade. It includes and unobstructed sidewalk for walking and a safety buffer area.

RIGHT-OF-WAY (ROW)

The City of Houston defines ROW as any public thoroughfare such as a street or road that typically includes travel lanes, median, utilities (poles, lighting), and may also include a safety buffer, sidewalk, other hardscape and landscape.



SAFETY BUFFER

Also indicated as a Key Element, Walkable Places defines the safety buffer as the area that shields the sidewalk from the street, and can contain a combination of landscaping, utilities and sidewalk amenities such as street furniture and decorative plantings.

LANDSCAPING

Landscape is an important element within the pedestrian realm, especially in the safety buffer. It provides important shade, storm water management and protection from automobiles. Installed street trees within the Pedestrian Realm must be chosen from an approved list provided by the City of Houston.

The illustrations below show the various ways to accommodate sidewalks and landscape within the ROW for the METRORapid University Corridor inside the pedestrian realm. The images on the opposite board provide a true depiction of these conditions.

PEDESTRIAN REALM DESIGN STANDARDS

The sidewalk must be a continuous surface, free of obstructions or encroachments. Sidewalks must comply with Agency standard details, *Public Right of Way Accessibility Standards (PROWAG)*, *Texas Accessibility Standards, City of Houston Infrastructure Design Manual and American Association of Highway and Transportation Officials (AASHTO).*

Alternative methods of Sidewalk construction may be used in places where tree preservation is of concern. Alternative materials may be, but are not limited to, decomposed granite and checkered plates. All alternatives shall be coordinated with the City's Urban Forester, as applicable, and approved by the City Engineer.

To minimize right-of-way impacts to adjoining properties, a modification to the pedestrian realm standards is required. Any modification to the pedestrian realm standards will require METRO to seek a variance from the City of Houston.

FRONTAGE BUFFER AND SAFETY BUFFER WIDTH STANDARDS

LANDSCAPE CONSIDERATIONS

TREE PROTECTION

City of Houston Required Tree Protection Plan Process includes:

ISA certified arborist, landscape architect and City of Houston Urban Forestry

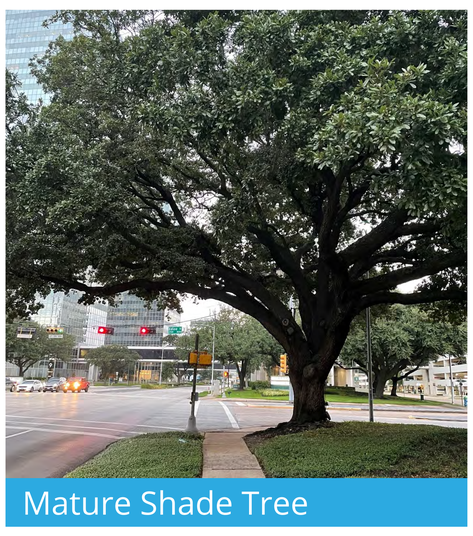
We Are Here

1 → 2 → 3 → 4 → 5 → 6 → 7

Step 1 – Tree Survey
- Identify species and size (caliper and spread)
- Condition analysis (disease, structural defects, severely pruned)

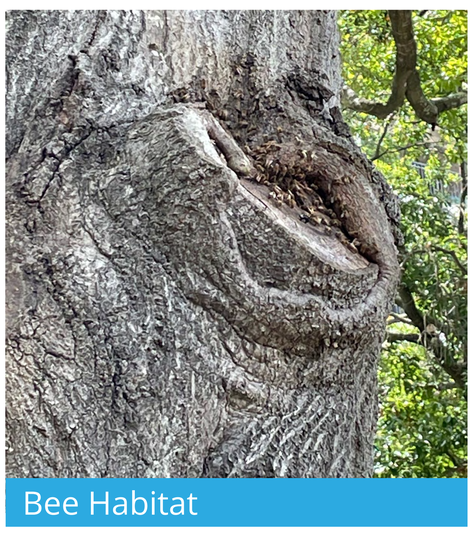
Step 2 – Tree Protection Analysis
- Identify trees that warrant removal (because of tree condition)
- Identify trees that can be protected during construction
- Identify protection measures (root pruning, fencing, etc)
- Consider design plan changes
- Sidewalk width variance with City of Houston
- Utility relocation
- Identify trees that cannot be protected
- Determine required mitigation requirement
- Maximize replacement planting

Step 3 – Coordinate BRT Plan Changes
- Update construction plans to maximize tree protection



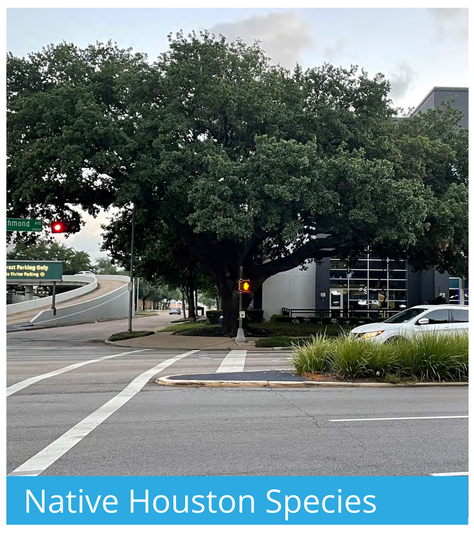
Step 4 – Tree Mitigation Plans
- Quantity, species, and size of new trees included in the plans
- Additional possible mitigation requirements: planting trees on METRO owned property for future use, planting trees in adjacent open space, and contributing to a designed tree fund

Step 5 – Pre-Construction Activities
- Root and canopy pruning
- Injected with mycorrhizal fungi at least one growing season prior to construction to improve survivability
- Additional watering of trees, as required, with construction activities that disturb the soil



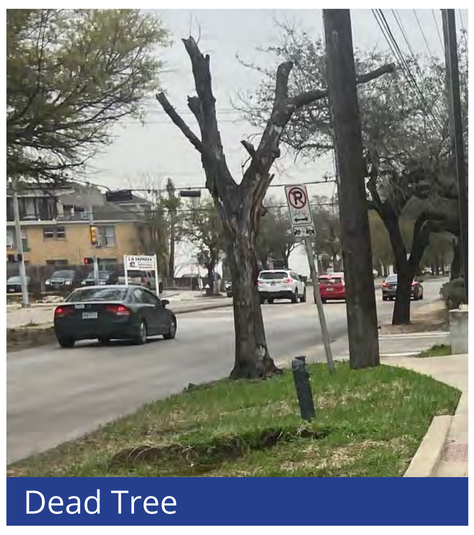
Step 6 – During Construction
- All construction staff must attend a mandatory METRO educational class on tree protection
- Strict compliance to the Tree Protection Plans and Specifications
- Continuous site inspections through construction
- Remove contaminated soil and aerate compacted soil

Step 7 – After Construction
- Maintain the same grade as before construction
- Water stressed trees to help them recover from construction stress

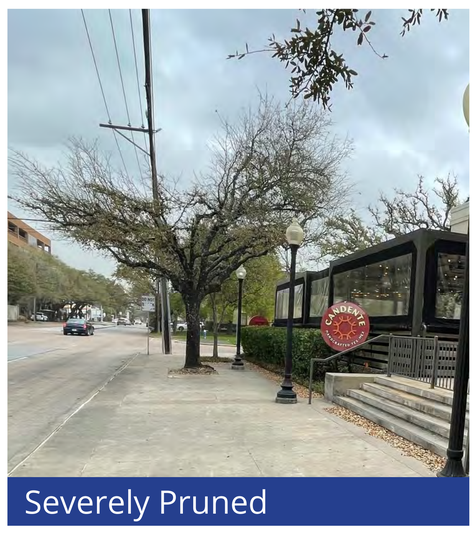


Trees to Preserve

Mature Shade Tree



Bee Habitat



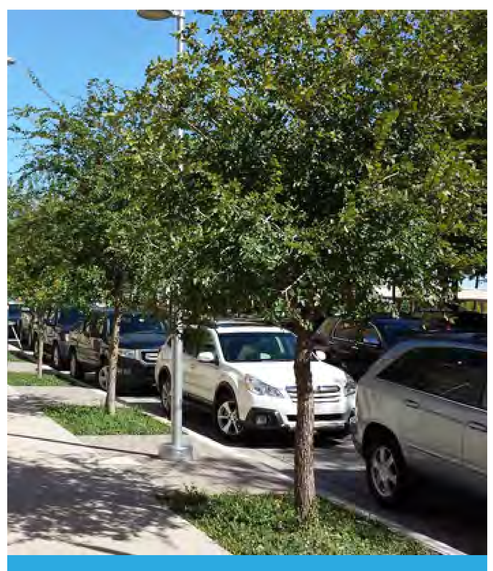
Native Houston Species

Trees to Remove

Dead Tree

Severely Pruned

LANDSCAPE PLANTING PLANS

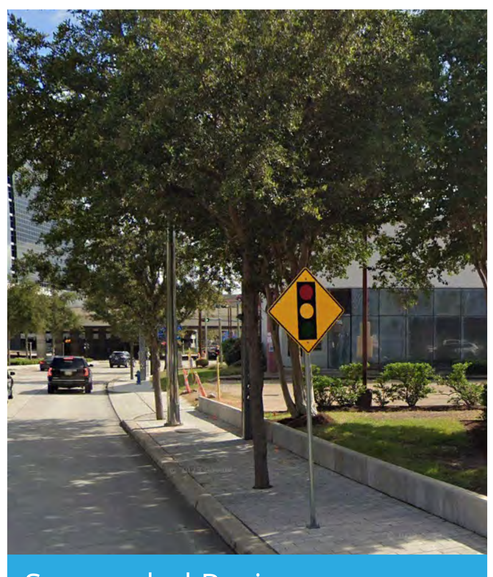


Goal - Work with the community to create a plan that takes into account the unique locations and best tree varieties suited to each location.

City of Houston Tree and Shrub Ordinance

Street Tree Requirements
- 1 tree per 30 linear feet of frontage
- 3″ caliper size for transit corridor street
- Credit for trees 4″ caliper or more
- Credit for preserving existing trees

Street Tree Planting
- Spacing no closer than 20 feet
- At least 3 feet from back of curb to center line of tree trunk



Street Tree Planting in Esplanade (Median)
- Not closer than 75 feet to the end of the esplanade
- Not closer than 50 feet from any mid-block opening in the esplanade.
- At least 5 feet from back of curb to center line of tree trunk
- Tree spacing not less than 30 feet

1 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston (COH), Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

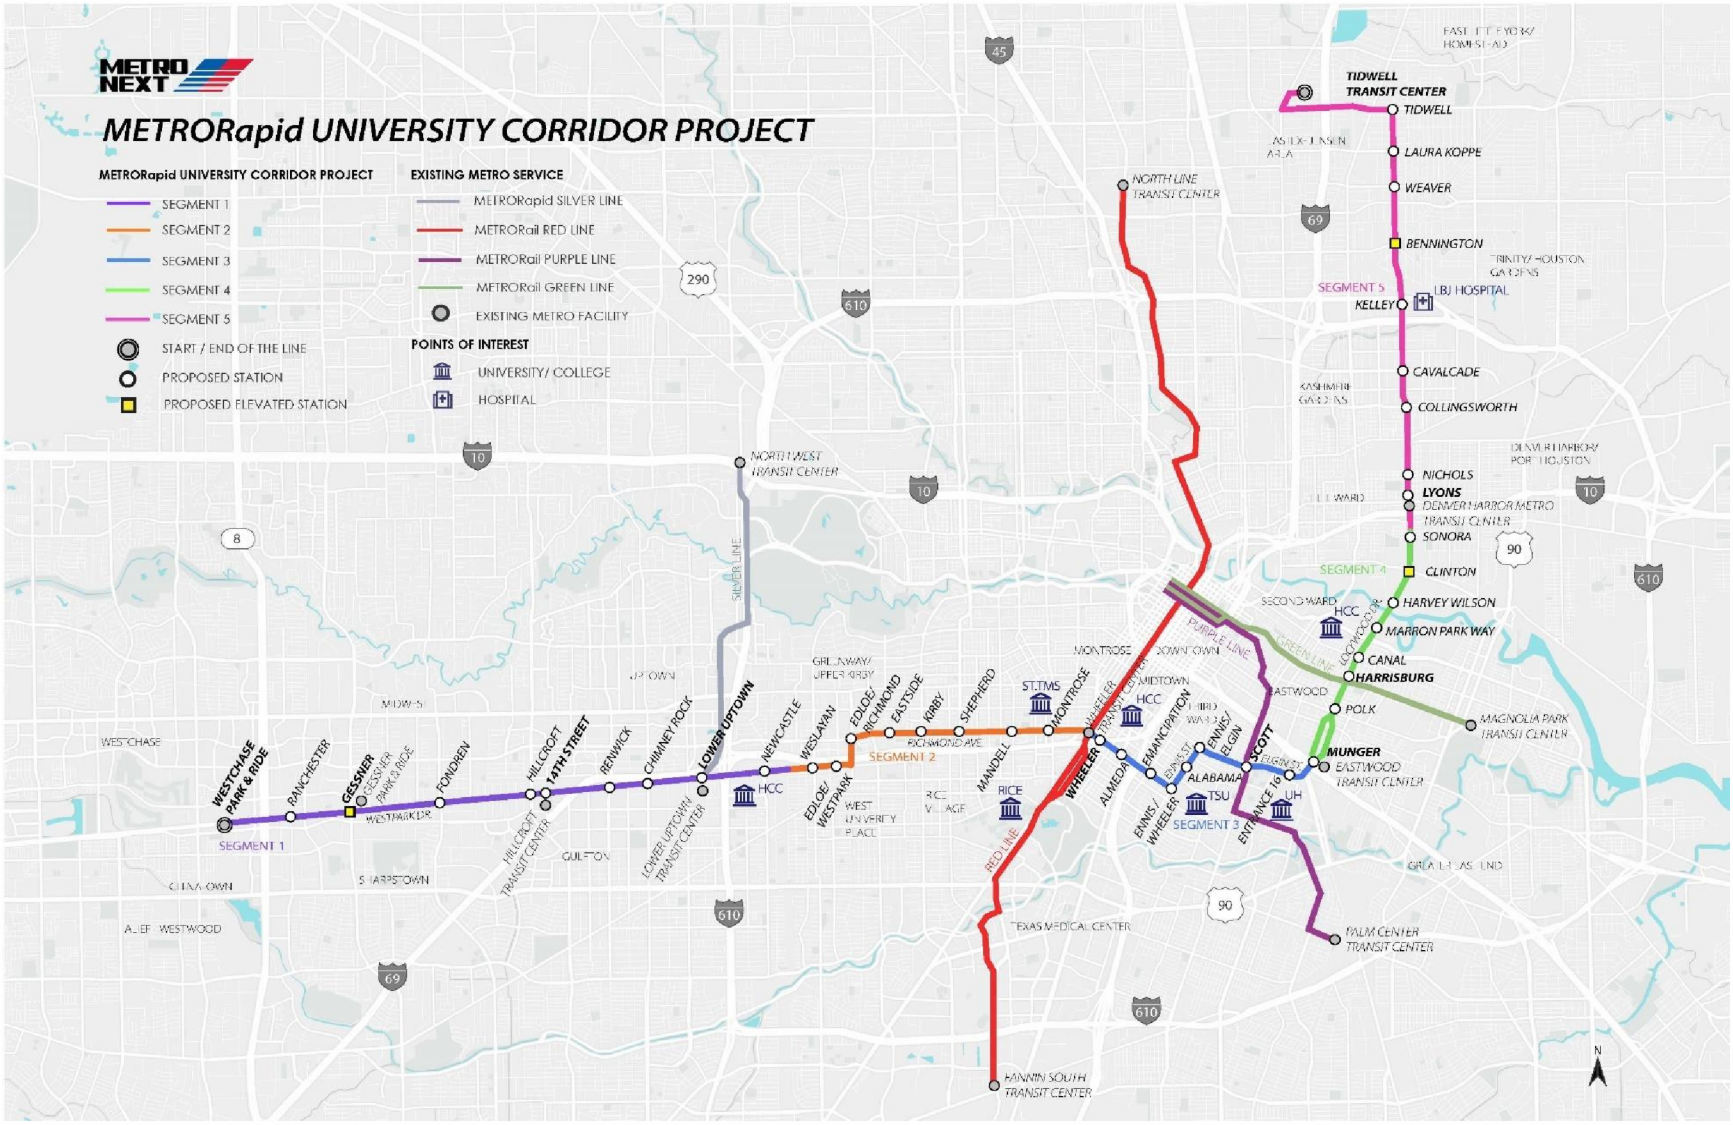
1.1 Purpose of Report

The purpose of this Environmental Justice (EJ) report is to present a profile of the community surrounding the Project and analyze the potential effects of the Project on that community. This report describes the demographics of the surrounding communities and documents METRO's coordination efforts with EJ communities. It presents the potential effects of the Project on EJ communities and includes an assessment of whether the surrounding low-income and minority populations would experience any disproportionately high or adverse impacts due to the proposed Project. This report also discusses avoidance and minimization strategies that METRO has taken to eliminate or reduce impacts, benefits to EJ populations due to the proposed Project, and any mitigation measures METRO would undertake to offset potential adverse effects.

1.2 Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park and Ride in the west to the Tidwell Transit Center in the northeast. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park and Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the COH. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1. Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.



The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other service like METRORail, METRORapid, and local bus services. Two stations would be incorporated into existing METRO service like. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

Table 1-1: University Corridor Segments

Segment	From	To
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Dr
2	Westpark Dr 1,500 feet east of UPRR tracks, east of Newcastle Dr	Richmond Ave at US-59
3	Richmond Ave at US-59	Elgin Street at I-45 (Eastwood Transit Center)
4	Elgin Street at I-45 (Eastwood Transit Center)	Lockwood Drive at Margarita Street
5	Lockwood Dr at Margarita St.	Tidwell Transit Center

Figure 1-1: University Corridor Proposed BRT Alignment

2 Methodology

The general methodology for addressing Executive Order (EO) 12898 involves the following:

- Identifying the EJ populations within the study area;
- Assessing whether the Project would result in disproportionately high and adverse effects on environmental justice populations, taking into consideration mitigation and enhancement measures and Project benefits, as appropriate; and
- Providing information on the efforts that METRO has made to involve minority, low-income, and LEP populations in the project development process.

The United States Department of Transportation (USDOT) Order 5610.2(c) and FTA Circular 4703.1 define a minority population as any readily identifiable groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed DOT program, policy, or activity. Minority populations include persons who are American Indian and Alaska Native, Asian, Black or African American, Hispanic or Latino, and Native Hawaiian and other Pacific Islander.

A low-income population is defined as any individual or household with income at or below the U.S. Census poverty thresholds. The U.S. Census poverty threshold for 2023 is $30,000 for a family of four. For comparison, the poverty threshold for a family of four in 2020 was $26,200.

U.S. Census data and American Community Survey (ACS) 5-year average data (2016-2020) were used to identify minority and low-income populations. The EJ analysis includes all Census block groups that fall fully or partially within a ½-mile (the study area) of the proposed alignment. Community resource data was obtained from City of Houston and Texas Education Agency GIS files to determine the location of community resources. This data was verified through Google Earth. The assessment of the potential for disproportionately high and adverse effects is based upon the environmental impact information developed for the overall project.

3 Existing Conditions

This section identifies EJ populations in the study area.

3.1 Minority Populations

Minority populations account for approximately 75 percent of the total population in the 199 populated census block groups within the study area (See **Table 3-1**). Hispanic/Latino communities comprise the highest percentage of the study area minority population.

Minority populations in the 199 individual populated census block groups in the study area range from 17 to 100 percent. All of the Segments with the exception of Segment 2, have a higher percentage of minority populations than the city and county averages. Segment 1 and Segment 5 have the highest minority populations with 97 percent total minority. Minority population data is

displayed by census block group in **Appendix A**, **Tables A-1** through **A-5** and shown visually in **Appendix B, Figure B-1**.

Table 3-1: Race and Ethnicity Summary

Geography	% White*	% Black*	% American Indian*	% Asian *	% Pacific Islander	% Some Other Race*	% Two or More Races *	% Hispanic or Latino**	% Total Minority
Study Area	24.8%	22.2%	0.1%	7.9%	~0.0%	0.4%	2.1%	42.3%	75.2%
City of Houston	24.2%	22.0%	0.1%	7.0%	0.1%	0.3%	2.4%	44.0%	75.8%
Harris County	28.9%	18.5%	0.2%	6.9%	~0.0%	0.2%	1.9%	43.3%	71.1%

*The complete Census race descriptions are as follows: White alone; Black or African American alone; American Indian and Alaska Native alone; Asian alone; Native Hawaiian and Other Pacific Islander alone; Some Other Race alone; and Two or More Races. Only non-Hispanic races are displayed.

**The concept of race is separate from the concept of Hispanic origin. Hispanic origin can be viewed as the heritage, nationality, lineage, or country of birth of the person or the person's parents or ancestors before arriving in the United States. People who identify as Hispanic, Latino, or Spanish may be of any race.

Source: U.S. Census Bureau, 2016-2020 ACS 5-Year Estimates. Table B03002.

3.2 Limited English Proficiency Populations

Limited English Proficiency (LEP) populations are included in this analysis to ensure that the current communication strategy is tailored appropriately. This information can also be used to inform any future public engagement campaigns to help ensure that non-English speaking populations are given meaningful access to participate in the public engagement process. Approximately 23 percent of the total population aged five and older in the study area speaks English less than "very-well". A majority of the LEP population in the study area speaks Spanish, with smaller percentages speaking Indo-European Languages, Asian and Pacific Islander Languages, and Other languages (See **Table 3-2**).

The LEP populations in the individual census block groups within the study area range from 0 to approximately 79 percent of the total populations ages five and older. These populations that speak English less than "very-well" according to the 2016-2020 ACS are presented in **Appendix A**, **Tables A-5** through **A-10** and shown visually in **Appendix B, Figure B-2**.

Table 3-2: LEP Summary

Geography	Total Percent LEP Population	Percent Spanish	Percent Indo-European Languages	Percent Asian & Pacific Islander Languages	Percent Other Languages
Study Area	23.1%	20.0%	1.1%	2.0%	~0.0%
City of Houston	22.1%	19.0%	0.8%	2.0%	0.3%
Harris County	19.7%	16.2%	0.7%	2.2%	0.6%

Source: U.S. Census Bureau, 2016-2020 ACS 5-Year Estimates. Table B16004.

3.3 Low-Income Populations

Low-income populations account for approximately 25 percent of the total population in the populated census block groups within the study area (See **Table-3-3**). In 2023, the Department of Health and Human Services (DHHS) Federal Poverty Guidelines for a family of four is $30,000. The poverty threshold for a family of four in 2020 was $26,200.

Table 3-3: Poverty and Low-Income Summary

Geography	Percent Individuals Below Poverty	Median Household Income (in 2019 inflation adjusted dollars)
Study Area	24.7%	$53,482*
City of Houston	19.4%	$55,499
Harris County	15.6%	$63,498

*Average of median household incomes in the populated census block groups in the study area.

Note: The ACS 2016-2020 5-year estimates excluded three populated block groups in the study area from the median household income calculations. See **Table C-2** in **Appendix C** for more details.

Sources: U.S. Census Bureau, 2016-2020 ACS 5-Year Estimates. Tables B17021 and B19013.

The median household income ranges between segments. Segment 1 ranges from $19,157 to $137,530. Segment 2 has the highest median income of the segments, ranging from $55,000 to $238,935. Segment 3 has some of the lowest median income census tracts ranging from $11,662.00 to $121,950. Segment 4 ranges from $15,268 to $72,833. Segment 5 has the lowest median income, ranging from $10, 467 to $61,089.

3.4 Transit-Dependent Populations

This analysis also recognizes transit-dependent populations. Zero-car households, children (under 18), seniors (65 and older), and people with disabilities are traditionally transit-dependent populations and can benefit from improved access to transit to meet their mobility needs. **Table 3- 5** reports the percentage of households without a vehicle, children, seniors, and people with disabilities data available for the census block groups within the study area.

Zero-car households account for approximately 11 percent of the total households in the census block groups within the study area (see **Table 3-5**). As **Figure B-4** in **Appendix B** illustrates, zero-car households in the individual census block groups in the study area range from 0 to approximately 61 percent. Additionally, 108 census block groups were estimated to have higher percentages of zero-car households than the city and county averages. The segment with the highest average of zero-car households is Segment 3 with approximately 20.45 percent of households without cars. Residents in Segment 5 have also been historically underserved with transit service.

Children account for approximately 22 percent of the total population within the study area (see **Table 3-5**). As **Figure B-5** in **Appendix B** illustrates, populations under the age of 18 in the individual census block groups in the study area range from 0 to approximately 22 percent. Additionally, 65

populated census block groups were estimated to have higher percentages of populations under the age of 18 than the city and county averages. The segment with the highest average of population under the age of 18 is Segment 1 at approximately 24.96 percent.

Seniors account for approximately 10 percent of the total population in the census block groups within the study area (see **Table 3-5**). As **Figure B-6** in **Appendix B** illustrates, populations 65 years and older in the individual census block groups in the study area range 0 to approximately 57 percent. Additionally, 85 populated census block groups were estimated to have higher percentages of populations 65 years and older than the city and county averages. the segment with the highest average of population 65 years and older is Segment 2 at approximately 14.20 percent.

People with disabilities account for approximately 11 percent of the total population 18 years and older in the census block groups within the study area (see **Table 3-5**). As **Figure B-7** in **Appendix B** illustrates, people with disabilities in the individual census block groups in the study area range from approximately 0 to approximately 55 percent. Additionally, 84 populated census block groups were estimated to have higher percentages of populations with disabilities than the city and county averages. The segment with the highest average of people with a disability is segment 5 at approximately 22.74 percent. Transit-dependent population data is displayed by census block group in **Appendix A**, **Tables A-16 through A-20** and shown visually in **Appendix B, Figures B-4 through B- 5**.

Table 3-5: Transit-Dependent Populations Summary

Geography	Percent Zero-Car Households	Percent Children (Under 18)	Percent Seniors (65 and older)	Percent People with a Disability
Study Area	11.23%	22.05%	9.72%	11.19%
City of Houston	7.20%	25.93%	10.63%	11.50%
Harris County	6.11%	26.68%	10.50%	11.53%

Sources: U.S. Census Bureau, 2016-2020 ACS 5-Year Estimates. Tables B25044, B01001, and C21007.

4 Public Involvement

Public involvement is a continuous component throughout the development process and includes efforts to involve the public in the decision-making process related to scoping, design, and potential impacts. METRO has used and will continue to use a variety of methods to gather meaningful input from the community, including LEP populations. Public and stakeholders meetings will continue to be held throughout the design of the Project.

4.1 Meetings

Approximately 20 in-person public meetings and two virtual ones have been held to date for the general public and interested citizens. The public meetings have been accompanied by multiple meetings with local organizations, neighborhoods, universities and various stakeholders. See **Table D-1** in **Appendix D** for a list of public involvement conducted to date.

Due to the presence of LEP populations along the study area, METRO advertised the meetings in Spanish, and translated the meeting presentation content and recordings. METRO also sent area residents direct mailers that advertised the meetings in four languages - English, Spanish, Vietnamese, and Chinese. METRO also ensured that interpreters were present at meetings located in predominately Spanish-speaking neighborhoods.

4.2 Summary of EJ Related Comments Received

EJ related issues raised during the public involvement process are described below.

- Questions about the Project service areas and why the Project does not extend to other areas and universities.
    - These comments were mostly raised at the meetings held in Segments 1 and 5. METRO identified the proposed alignment and station locations identified based on public input and its ability to connect to other transit modes (METRORail, local bus, METRORapid), facilities (Transit Centers and Park and Rides) and activity centers (universities, employment centers, etc.) to ensure the line would be readily accessible. Station locations are still being finalized and are subject to change during final design.

- Comments about not sufficiently reaching out to the Spanish speaking community.
    - Direct mailers were sent to in Spanish to all communities. Public meeting materials were created in Spanish as well as translated presentations. Interpreters and headsets for translating meetings were provided.

- Comments about homelessness and gentrification.
    - METRO is committed to making its service accessible and affordable to all. The University Line intent is to allow for better access to jobs and education for communities which have had limited transit options in the past.
    - The Project design will incorporate Crime Prevention Through Environmental Design techniques to enhance safety for the University Line. As METRO expands services, there is also planned to be an expanding police presence on new lines.
    - METRO is committed to making its service accessible and affordable to all. Projects like the METRORapid University Rapid's intent is to allow for better access to jobs and education for communities that have had limited transit options in the past.

- Questions regarding safety and ADA accessibility at stations.
    - METRO has proposed several safety features at each station such as:
        - Accessible sidewalks and ADA ramps along the entire corridor.
        - Bike and pedestrian crossings be designed for safer crossings along the corridor.
        - Roadway modifications to improve safety.

- Many of the stakeholders have concerns about quality of life.

- METRO is aware of these concerns and is designing the Project to be located primarily within existing ROW in order to avoid impacting adjacent property where possible.
- Care would be taken to provide access, for pedestrians and vehicles, during construction and minimize noise impacts.

- Concerns over the Lockwood and Harrisburg Overpasses dividing the communities that are primarily non-English speaking and minority populations.
  - After extensive public involvement with the Eastwood neighborhood and adjacent communities, METRO reevaluated the proposed design to include an underpass instead of an overpass. The proposed design also includes continuous shared-use paths in these areas to further connect the communities on either side of Lockwood.

Community coordination is ongoing and the information in this section represents general topics related to EJ that were communicated by the public and collected through public involvement channels to date. METRO will continue to consider all public and stakeholder input as it refines the design of the Project to maximize transportation and community benefits while avoiding and minimizing impacts to communities and the environment as well as providing mitigation where warranted and reasonably feasible.

5 Environmental Commitments

5.1 Short-Term Construction Impacts

The communities adjacent to the footprint of the Project would experience temporary impacts during construction, such as traffic detours, closing off access to certain properties, increasing noise levels, vibration, dust, and the presence of construction equipment. Construction of the Project could result in potential changes to access and travel patterns to residences, businesses, and community facilities in the areas adjacent to the Project footprint. Construction is planned to start as early as 2028, though construction sequencing plans that would determine where and when construction would start and how it would be phased have not yet been developed. Initial phases of construction are anticipated to focus on major utility relocations. The street reconstruction would then be sequenced in segments to minimize the need for disruptions and construction impacts for the full duration of construction to any one area. Final design and construction plans would address maintenance of access for vehicles and pedestrians during construction.

Additionally, temporary construction easements would be needed for staging and parking areas as well as construction access. METRO anticipates that multiple staging areas would be used, some of which may only be used for part of the construction period. METRO will determine the locations of the temporary construction easements during final design. Temporary construction activity in staging areas and construction easements would convert the existing land on which they occur to temporary construction use. The owner of such lands would temporarily lose the use of that land until construction activity ends.

Additionally, short-term construction impacts would generate jobs, which would be directly supported by construction activities related to constructing the Project. Outside of the construction

impacts characterized above, the Project would not cause short-term construction-related impacts to socioeconomic resources. Construction impacts would be a benefit to the study area in terms of employment, labor income, and sales. METRO will coordinate with local businesses to maintain access during construction.

5.2 Long-Term Operational Impacts

Overall, the Project would keep community cohesion and not separate or isolate any distinct neighborhoods, ethnic groups or other special groups as existing access is being maintained as much as possible through design of the project. Areas across Houston would experience enhanced connection between communities with more efficient travel through Houston and the study area, along with additional bicycle and pedestrian elements.

Transit Benefits and Impacts

Communities in the study area would experience improved access to high-capacity transit as a benefit from the Project. Approximately 18 percent of the study area is transit dependent and would benefit from faster, convenient modes of travel.

Overall, there would be an improvement in pedestrian and bicycle connections and access. Throughout the corridor the Project includes additional sidewalks or crosswalks in station areas, where needed to support safe station access and shared-use paths along both sides of the corridor where feasible. To improve vehicular safety and reduce crash points, left turns from the University Corridor were converted to protected only phasing and separated to control movements across the BRT lanes. Existing left turn access was kept throughout the project as much as safely feasible.

The Project would not result in a major change in community cohesion or neighborhood quality as it would operate in existing roadways. It would improve transit accessibility and mobility, which in turn would encourage more pedestrian and bicycle travel The Project would further encourage pedestrian and bicycle connectivity with its improvements to intersections, crosswalks and other bicycle pedestrian facilities. Elevated sections of the alignment would be designed to avoid negative visual impacts as possible, and where safely feasible avoid removing any existing access to neighborhoods.

As part of the Project, a Transit-Oriented Development (TOD) study is ongoing to encourage redevelopment around station areas in an effort to create a sense of place in local neighborhoods. METRO is also committed to Arts in Transit which supports local, national, and international artists by celebrating the city's diversity through art and would cater to each segment's distinct character.

Air Quality

METRO is committed to using zero-emission vehicles and when funding is feasible, METRO plans to transition the buses to fully electric. This would benefit air quality along the corridor. The Project would comply with air conformity requirements.

Noise and Vibration

No noise and vibration impacts are anticipated. METRO is proposing to use electric buses, which would result in less noise and vibration than currently experienced along the corridor. See the *University Corridor Noise and Vibration Report* (METRO 2023) for more information.

Land Acquisitions and Displacements

METRO sought to use existing linear transportation and utility ROW in developing the Project to minimize the need to acquire private property. By using this approach, most land area that METRO would need for the Project can be accommodated within the existing ROW. However, some acquisitions and relocation of existing users of the affected properties will also be required to provide adequate ROW and accommodate station locations and other equipment along existing corridors. In this assessment, a full property acquisition is assumed to also be a displacement of the occupant(s). For partial acquisitions, only the portion of the parcel falling within the proposed ROW footprints is assumed to be acquired. Final determinations regarding property needs and acquisitions will be made by METRO during the final design phase of the Project. For detailed figures see **Appendix C**.

Table 5-1 summarizes METRO's preliminary determination of the potential full and partial property acquisitions that would be needed for the Project based on the 30 percent level of planning and schematic design. Overall, based on the preliminary design, the Project would result in 23 full acquisitions, 110 corner clips, and 448 partial acquisitions, affecting roughly 18 acres. **Table 5-2** provides a list of the full acquisitions. METRO is constantly finetuning the number of acquisitions planned and will make the final determinations regarding property needs and acquisitions during the final design phase of the Project. The Project would not displace any of the community facilities identified in the study area.

Table 5-1: Acreage and Acquisition Count by Type and Land Use by Segment

*See Appendix B for maps showing the census tracts and block groups.

Source: METRO, 2023.

Segment 1 Potential Displacements: The one potential displacement in Segment 1 is currently vacant commercial property. This block group is 54 percent minority and has a 11 percent LEP population. The median household is $63,169. This block group is below the city and county averages for minority and LEP populations. The average income is slightly lower than the Harris County average.

Segment 2 Potential Displacements: The property listed as Diamond Shamrock is no longer operating as a gas station and is serving as covered parking for Little Pappasito's Cantina. Little Pappasito's tex-mex restaurant located at the intersection of Kirby Drive and Richmond Avenue. Cigar Emporium, located at 3514 South Shepherd Drive is located within a small shopping center also containing Honey Art Café, Howdy's Hot Chicken Restaurant, a subway, 1-0-2 Lash by Tracy and Accents by Phillipe Upholstery Shop. These commercial properties are all located within the same census tract 4110.03, block group 1, which has a median household income of $91,591 and does not contain a minority percentage or a LEP percentage higher than the city or county averages.

The Valero located at 3519 S Shepherd at the intersection of Richmond Avenue and Kirby Drive is currently in use as a gas station. Lane Equipment Co. is next to the Valero and is a distributor and rental company specializing in frozen beverages and soft-serve ice cream machines. These properties are located within the 4108.01 census tract, block group 1 that has a median household income of $59,966 and does not contain a minority percentage or a LEP percentage higher than the city or county averages.

Along Richmond Avenue, two residential properties have the potential to be displaced. These parcels are located within census tract 4108.01, block group 2, which has a median household income of $64,792 and does not contain a minority percentage or a LEP percentage higher than the city or county averages.

Segment 3 Potential Displacements: Potential displacements in Segment 3 include two commercial properties, two single family residential properties, and one multi-family property containing 4 housing units. The Jack in the Box located at 4403 Fannin Street is in census tract 3125.01, block group 1 which has a median income of $52,297 and does not contain a minority percentage higher or a LEP percentage below the city or county averages. Green Seed Vegan, 1409 Wheeler Street, 1411 Wheeler Street, and 1419 Wheeler Street are located in census tract 3126.03, block group 2. This block group has a median income of $54,571, just below the city and county averages. It does not contain a minority percentage or a LEP percentage higher than the city or county averages.

Segment 4 Potential Displacements: Segment 4 has one vacant commercial property and one residential potential displacement located at 94 Lockwood Drive. The residential property appears to be vacant and is located in census tract 3104, block group 3, which has a median income of $45,556 below the city and county averages. The minority population is 90 percent and above the city and county averages and the LEP population is 22 percent, above the city and county averages.

Segment 5 Potential Displacements: Segment 5 has two potential commercial displacements and five potential single-family residential displacements. Located at 6902 Lockwood Drive, is a commercial property that appears to be a snow cone establishment that operates in the summer months. It is located in census tract 2302, block group 1. The parcel currently does not have median income information available, however, it is located within a LEP and predominately minority community.

One commercial property, the Buffalo Quick Stop Food Store and one residential property located at 8507 Lockwood Drive are within census tract 2304, block group 1. The Buffalo Quick Stop Food Store

does not appear to currently operate as a food store and does not have any signage indicating as such. The census tract has a median income of $24,375 and the minority population is 97 percent and above the city and county averages and the LEP population is 39 percent, above the city and county averages.

One residential property located at 2209 Lockwood Drive is in census tract 2113.02, block group 2. This block group has a median income of $72,075 and contains a minority population of 93 percent. The LEP percentage is below the city and county averages

Three residential properties are located in census tract 2302, block group 1 and block group 2. Block group 1 has a median income of $44,135 and block group 2 had a median income of $32,159. The two block groups have minority populations of 99 percent and 97 percent respectively, higher than the city and county averages. Both block groups have a LEP population lower than the city and county averages.

Socioeconomics

The Project would benefit transit-dependent populations by providing increased mobility and improved access and connectivity to high-capacity transit. Residents of the study area would particularly benefit from improvements in travel time, safety, and new bicycle and pedestrian accommodations. The Project would serve as a link to the residential growth and employment centers. No disproportionate adverse impacts to demographics, employment, or economic development are anticipated although land use and development patterns may change incrementally over time.

Totality of Effects

Based on this information long-term operational adverse impacts due to the Project include residential and commercial displacements and relocations. EJ populations exist in these areas to varying degrees, although higher concentrations are present in Segment 1, Segment 3 and Segment 5. The long-term benefits associated with the Project would include increased access to transit, enhanced efficiency of travel, and improved air quality. Over the long term, the EJ populations would benefit from the Project as a result of the increased access to transit, enhanced efficiency of travel, and improved air quality in the area. In the case of the proposed Project and considering the limited adverse effects, EJ populations would benefit overall from improved transit accessibility and mobility.

6 Environmental Commitments

Impacts from potential displacements resulting from the Project could occur; however, the extent to which displacements result in an adverse impact to the community would be determined by the extent to which those residents and businesses could relocate within the local area and local taxing jurisdiction. Displacees would receive assistance through compliance with the Uniform Relocation Assistance and Real Property Acquisition Act. METRO would coordinate with individual property owners and tenants regarding means to minimize and mitigate property acquisitions and displacements.

With regard to changes in travel and access patterns, METRO would continuously coordinate with local transit users to ensure access to transit on existing bus routes. Access to businesses would be maintained during construction for customers, deliveries and parking lots. METRO would continue communication with local businesses during construction to monitor effects and modify construction plans, if possible, to further reduce impacts.

During the design process, efforts were made to reduce impacts wherever possible. After design refinements, additional fieldwork and data analysis, 23 total displacements and 13 residential displacements would be required. Design is still ongoing to reduce the total number of impacts where feasible. No community facilities would be displaced. The locations of the displacements would be balanced across areas with high and low concentrations of EJ populations.

Severe and moderate noise impacts could occur during construction, but METRO would appropriately mitigate these impacts. At the severe impact level, impacts should be mitigated unless there are no practical means to do so.

7 Potential for Disproportionately High and Adverse Effects on EJ Populations

There does not appear to be a disproportionately high and adverse direct impact on minority and low-income populations associated with the Project due to limited adverse effects. the Project would result in a net benefit to the community including EJ populations and transit-dependent populations. This determination considers the significant individual effects of the Project, along with existing regulations and future planned actions by the City of Houston.

1 Introduction

The Metropolitan Transit Authority of Harris County (METRO) has proposed to construct a Bus Rapid Transit (BRT) line along the University Corridor, which extends approximately 26 miles from the Westchase Park & Ride facility in southwest Houston to the Tidwell Transit Center in the northeastern part of the city. Numerous facilities that maintain bulk quantities of hazardous materials on site or generate hazardous waste, or have done so in the past, are located along and in close proximity to the corridor. METRO aims to minimize potential legal liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) associated with owning, and human health and safety risks associated with constructing and operating transit facilities on, property that may have been impacted by hazardous materials released by activities on adjacent properties. To aid METRO in its decision-making process as the Project develops, HNTB, Inc., has contracted with AmaTerra Environmental, Inc. (AmaTerra) to evaluate risks to the Project posed by the presence of hazardous materials sites. The purpose of these studies is address potential impacts of the Project related to hazardous materials, as part of the Categorical Exclusion addressing over Project impacts performed pursuant to the National Environmental Policy Act (NEPA).

In July 2021, AmaTerra submitted a Hazardous Materials Report that evaluated registered hazardous materials sites adjacent to the Project corridor. At the time, the design phase was incomplete, so it was unknown from which hazardous materials sites new right-of-way (ROW) might be acquired or on or adjacent to which construction might be required. The sites were found through a database search obtained from a commercial vendor and found 275 adjacent properties listed in the various databases searched. Of these sites, however, 150 were eliminated from further consideration due to the database(s) in which they were listed or specific information in their listings. Such site listings included the following:

- Listings related to air permits or releases
- Listings unrelated to hazardous materials (e.g., stormwater permits or similar)
- Listings whose registered addresses and locations were found to be corporate offices rather than locations at which hazardous materials were managed
- Notices of Violations, Corrective Actions, or enforcement actions taken in response to violations unrelated to hazardous materials releases, such as recordkeeping, testing, maintenance, training, etc.
- Listings from the Facility Index System (also known as the Facility Registration System) database unless the listing relates to a potential release of hazardous materials and the facility is not otherwise listed in a relevant database. This database only identifies facilities listed in other databases, and as such serves essentially as a "list of listings." It provides little detail about any specific facility apart from the type of activity that resulted in its listing.
- Drycleaners that serve(d) only as a drop station, with no actual drycleaning operations at the listed facility
- Spills or other emergency response incidents that did not involve soil or groundwater contamination, e.g., incidents in which hazardous materials were only released in a building

or vehicle, onto a paved ground surface, or to storm sewers or flowing water that would have conveyed the material off the property

- Facilities that only maintain(ed) aboveground storage tanks, unless a release is associated with the facility
- Facilities that merely store(d) hazardous materials or generate(d) hazardous waste, with no indication of either any documented releases or the use of underground storage tanks (USTs).

The nature of such databases or listing-specific information implied at the outset that METRO would not risk potential CERCLA liability or safety concerns should it acquire ROW from, or construct bus stations on, any of these sites.

The remaining 125 sites were found to have been locations of known past releases to soil or groundwater, to maintain or have maintained USTs on the property, or otherwise suggest the potential for unknown releases that could impact the property in areas that METRO might consider for ROW acquisition and/or construction. Based on information in their respective database listings and site-specific factors for each, the 125 sites were rated as being of no, low, or moderate risk for CERCLA liability or construction safety.

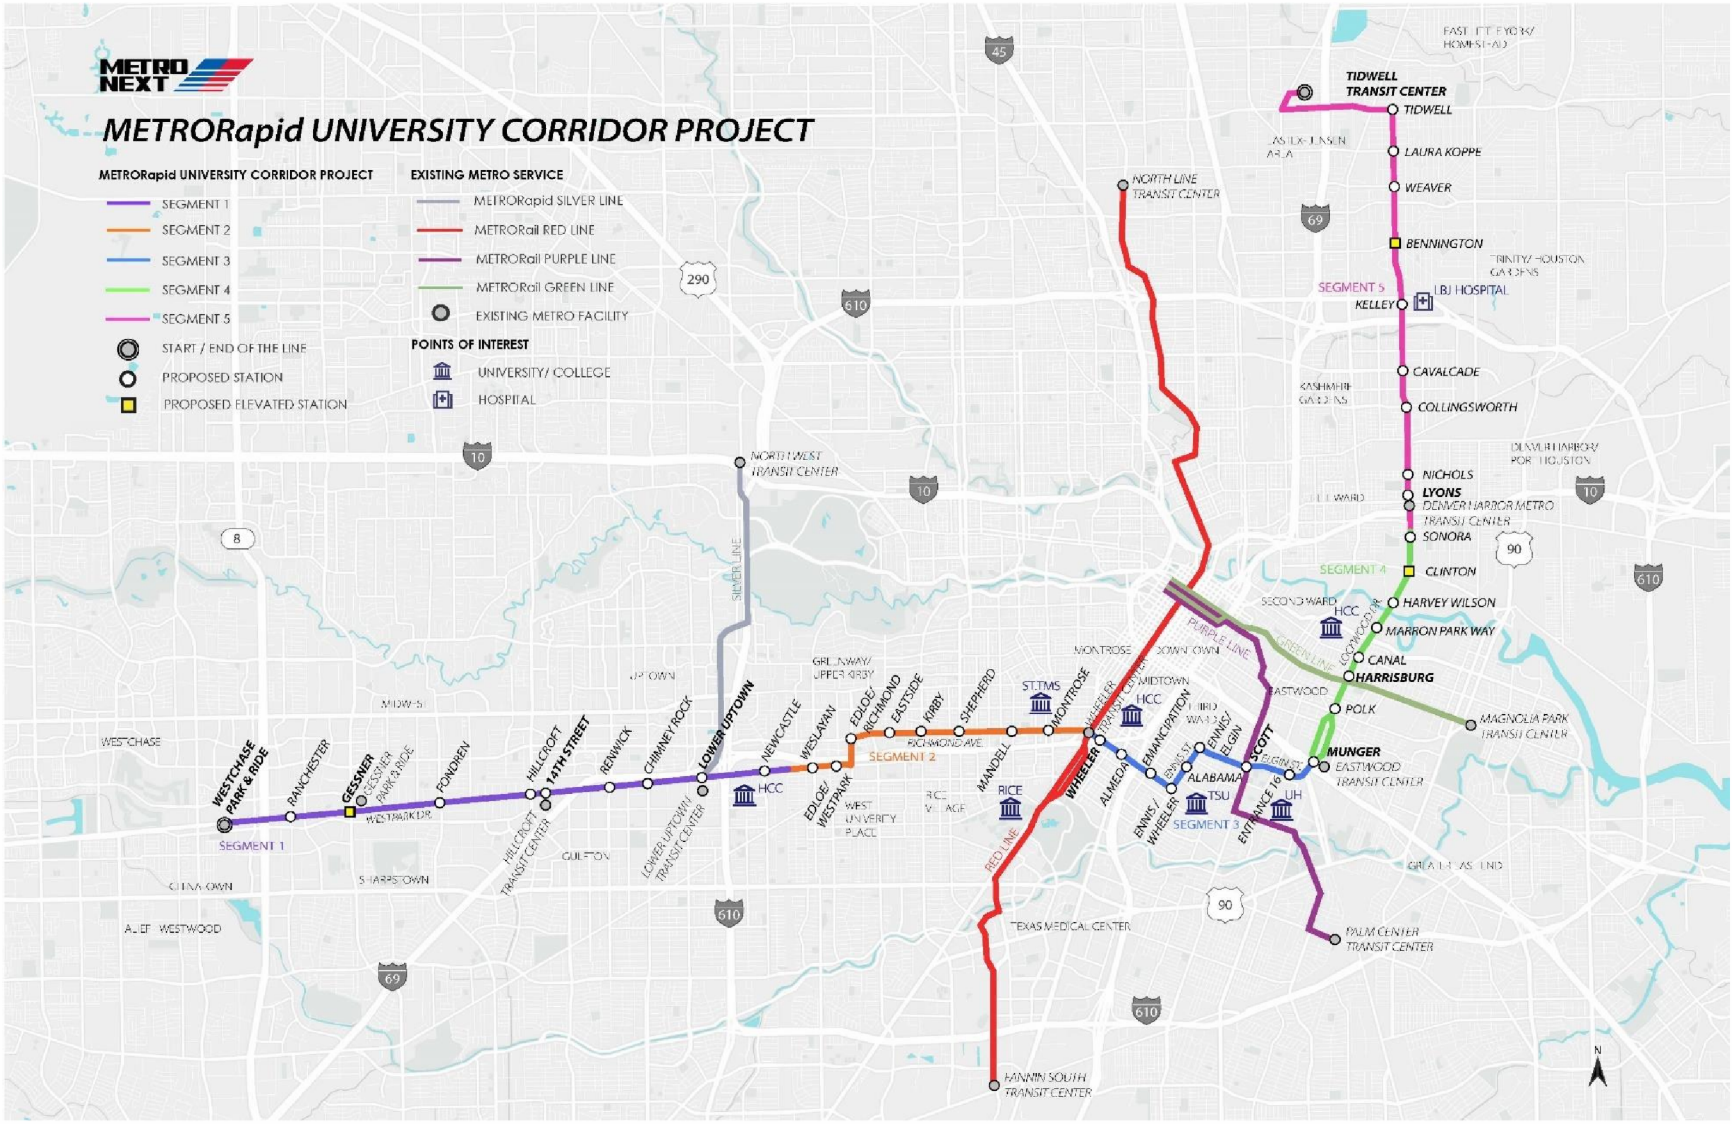
In February 2022, HNTB provided AmaTerra with conceptual designs and roll plots of each of the five segments. These design documents provided detail on sites of proposed construction and new ROW acquisition. AmaTerra then systematically evaluated each of the previously identified sites to determine which might require more detailed study and evaluation through Phase I Environmental Site Assessments (ESAs). The results of this analysis are presented in this report, with copies of Phase I ESA's attached as Appendices.

2 Project Description

The METRORapid University Corridor Project (the "Project") is a proposed 25.3-mile BRT line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned ROW from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 2-1** and **Figure 2-1.**

The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other service like



METRORail, METRORapid, and local bus services. Two stations would be incorporated into existing METRO facilities, Westchase Park and Ride and Tidwell Transit Center. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

Table 2--1: METRO University Corridor BRT Line Segments

Segment	From	To
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Dr
2	Westpark Dr 1,500 feet east of UPRR tracks, east of Newcastle Dr	Richmond Ave at US-59

4	Elgin St at I-45 (Eastwood Transit Center)	Lockwood Dr at Margarita St.
5	Lockwood Dr at Margarita St.	Tidwell Transit Center

Figure 2-1: University Corridor Proposed BRT Alignment

3 Methodology

3.1 2021 Hazardous Materials Evaluation

The July 2021 Hazardous Materials Evaluation was conducted to identify hazardous materials sites adjacent to the proposed BRT route. It was a desktop study that essentially functioned as an enhanced constraints analysis, in which AmaTerra not only identified potential sites of concern but provided broad estimates of the risk each site might pose to the Project. As part of its study, AmaTerra obtained a search of federal and state hazardous material databases from Environmental Risk Information Services (ERIS) in order to identify registered facilities at which releases of hazardous materials have been documented or which might pose a risk of contamination by hazardous materials. The databases were searched to various distances, based on the search radii specified in *American Society for Testing and Materials (ASTM) E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The risk evaluation at the time was based on documentation of past releases, the status of remediation or other responses to such releases, the current presence of active USTs, distance to/from the BRT footprint, and the topographic relationship of the property to the corridor. It did not, and was not intended to, provide Phase I ESA's of any property, and as such did not include such typical Phase I elements as review of historical topographic maps, aerial photographs, and Sanborn Fire Insurance Maps, interviews, or site visits.

AmaTerra considered several factors in estimating overall risks of each adjacent property during the 2021 survey. As previously noted, risks include both the risk of liability for future remediation under CERCLA associated with acquiring or owning a contaminated property as well as the safety risk for workers during construction, were any proposed, and, depending on the nature of the constructed facility, users or occupants of the facility. Factors that were considered included the following:

- Known releases on the property. Properties with known releases would generally be considered of higher risk than those without.
- Status of releases. Properties at which releases are still being addressed would be of greater risk than those at which they have been resolved. For properties at which the contamination issue has been resolved, this risk primarily applies to safety associated with exposure to residual contamination rather than legal liability under CERCLA, as it is very unlikely that TCEQ would issue final concurrence for Leaking Petroleum Storage Tank (LPST) or a Voluntary Cleanup Program (VCP) Certificate of Completion for a release that still requires remediation.
- The current presence of underground storage tanks on the property. While most modern tank systems include leak detection systems and other counter-spill features, previously undetected leaks are still possible. Aboveground tanks are considered to be of lower risk, as releases are readily apparent; UST releases, by contrast, may persist and migrate for an extended period of time before being detected.

- Topographic relationship of the property to the Project footprint. The surface topographic gradient often serves as a rough approximation of the water table gradient. Most portions of the Project area have a generally eastward natural topographic gradient, frequently influenced by a southerly component as well. Properties at higher/upgradient elevations- often those on the north or west side of a proposed segment- are considered to pose a greater risk to the Project than those at the same/cross-gradient or lower/downgradient elevations.

3.2 2023 Hazardous and Contaminated Materials Technical Report

Upon receipt of design details in February 2022, AmaTerra was contracted to prepare this Hazardous and Contaminated Materials Technical Report to build on the 2021 study. Based on conceptual plans available at the time, an evaluation of a site's need for a Phase I ESA was conducted, based on several factors: whether the previous study found at least some risk based on the factors above, plans (or lack thereof) for subsurface excavation or disturbance, plans (or lack thereof) for acquisition of new ROW, documentation (or lack thereof) of previous releases, the nature of contamination, if any (with soil contamination not generally being more localized and groundwater contamination implying greater mobility of contaminants), and the estimated hydrogeologic relationship of the property relative to proposed construction (up-, cross-, or downgradient, presumed from topographic relationship unless otherwise known). Other site-specific factors at some properties were also considered. Phase I ESA's were then conducted on properties deemed to require one, in compliance with the updated ASTM standard E-1527-21.

An additional database search was obtained from ERIS in January 2023 based on the realigned portion of Segment 3. Sites mapped as being adjacent to this new alignment were subject to the same analysis as above. Three sites were identified at locations adjacent to the realigned portion, one of which (The Texas Southern University Pharmacy at 3100 Cleburne Street) was found to be mapped inaccurately and eliminated from further consideration; its listed address is actually that of the university itself and does not reflect the actual location of the facility. A second facility, Riverside General Hospital, was correctly mapped at the southwest corner of Ennis Street and Elgin Street. This facility, however, is similar to the 150 facilities immediately eliminated from further consideration in the 2021 study, as its database listings suggest that it only generated small quantities of hazardous waste, did not ever have a release, and never stored bulk quantities of hazardous material or maintained storage tanks. It is included in this analysis only because it was not previously evaluated in 2021, prior to the realignment of Segment 3. The final newly identified site, Sunmart 317, is an active service station at 3033 Elgin Street. It was evaluated in the same manner as other sites in this study.

The realignment of Segment 3 also resulted in the deletion of one 2021 identified property, Map ID #179 (identified only as Former Gas Station at 3432 Scott Street) from this analysis, as it no longer adjacent to Segment 3. In total, the original 125 sites from the 2021 study, two additions of adjacent sites, and deletion of one 2021 site resulted in a total of 126 sites evaluated for the need for Phase I ESAs.

4 Determination of Need for Further Action

With the exception of one property eliminated from evaluation due to the realignment of Segment 3, the remaining 124 properties identified in the original Hazardous Materials Report, as well as two additional properties adjacent to the new alignment of Segment 3, were initially evaluated for the need for further study through a Phase I ESA. This evaluation was based on conceptual plans available to AmaTerra at the time of Project initiation. Three Phase I ESA's addressing four properties (two of which were adjacent to one another and were thus addressed in a single Phase I) were conducted.

Following further development of the proposed design, METRO provided AmaTerra with utility maps based on 30 percent design. AmaTerra located the 126 properties on these maps to determine the extent to which any might impact subsurface soils in adjacent excavations for relocation of utility poles or installation or lowering of electrical and cable duct banks and water, storm, and sanitary sewer lines. While the utility maps pinpointed the lateral locations and extents of the various utilities, they did not generally specify depths, typically either stating a minimum depth or indicating no depth measurements at all, only "lower in place" or similar statements.

Tables 4-1 through **4-5** present the results of this evaluation, as well as future actions that might be required, of the respective properties adjacent to Segments 1 through 5. Locations of each site are shown in the figures in **Appendix A**.

Table 4--1: Results of Evaluation of HazMat Sites for Phase I Environmental Site Assessment, Segment 1

Address	2021 ERIS Map ID#	Risk Level per Previous Study	Further Action?	Factors Considered
3802 Rogerdale Rd	23	Low	Soil management plan	Subsurface electrical/cable installation, relocated pole(s), Certificate of Completion (COC) issued by TCEQ, no new ROW, construction cross-gradient
10400 Harwin Dr	425	Low	No	Subsurface electrical/cable installation, final concurrence issued by TCEQ, and case closed, soil contamination only, no new ROW, construction cross-gradient

Sources: ERIS 2021, HNTB 20230217 UNC Proposed Utility Segment 5

One-hundred twenty-four of 126 properties had previously judged to have been of no risk or had had their contamination cases resolved, meaning that cleanup levels for soil and/or groundwater had been achieved and TCEQ had closed the case. As shown in **Tables 4-1** to **4-5**, four of the 126 adjacent properties were judged to require Phase I ESA's, based on AmaTerra's initial evaluation of conceptual plans.

- A property at 3520 S. Shepherd Drive/2100 Richmond Avenue, the northwest corner of Richmond Street and S. Shepherd Drive on Segment 2. The property is the former location of a drycleaners at which investigation of groundwater contamination is ongoing and from which ROW would be acquired.

- A property at 4516 Harrisburg Boulevard, the southwest corner of Harrisburg Boulevard and Lockwood Drive on Segment 4. Documented releases at the property have been resolved, but it is unknown where on the property these releases may have occurred. It is possible that residual contamination could be present in soils in the ROW to be excavated for the proposed underpass beneath the UPRR line if contaminants were found to have migrated offsite.

- Two adjacent properties at 5311 Clinton Drive and 1025 Lockwood Drive, the respective northwest corner of Clinton Drive and Lockwood Drive and the west side of Lockwood Drive to its north on Segment 4. Documented releases affecting groundwater at the former have been resolved. The VCP listing for the latter indicated that the facility was ultimately withdrawn from the program, while the status of the LPST listing indicates only that site characterization was incomplete as of its last update. Neither listing for the 1025 Lockwood property shows any activity since 1998, and it is likely that progress on its releases, and possibly successful remediation, has been made in the intervening time. Nevertheless, the properties are hydrogeologically upgradient of the locations of deep excavations for bridge supports in the ROW of Lockwood Drive, suggested the need for additional consideration through the Phase I ESA process. Because Phase I ESA's of adjacent properties such as these would show extensive overlap, one ESA focused on 1025 Lockwood Drive due to the lack of formal documentation of its resolution was deemed to be appropriate. The Phase I ESA considered impacts from, and risks related to, the adjacent property at 5311 Clinton Drive and other nearby listed properties as well.

In the subsequent evaluation of the properties using utility maps, it was found that some combination of electrical/cable duct bank installation or lowering, water lines, sanitary and storm sewer lines, and/or relocated utility poles were planned at 70 properties. At a minimum, it is recommended that METRO have a soil management plan in place as excavations are carried out at these sites. A soil management plan would detail procedures to be followed in the event that contaminated soils were excavated. These sites may require additional further action at some time in the future, as the design is refined.

5 Results of Phase I ESA's

Phase I ESA's of properties at 3520 S. Shepherd Drive/2100 Richmond Avenue, 4615 Harrisburg Boulevard., and 1025 Lockwood Drive were conducted. Copies are attached as **Appendices B-D**. The purpose of the ESA's was to identify actual or potential Recognized Environmental Conditions (RECs) that could result in possible environmental liability under CERCLA arising from METRO's planned acquisition of a portion of the property for new ROW and concerns over worker safety during removal of subsurface soils from ROW adjacent to the latter two properties. The evaluations included a search of various hazardous materials databases, review of historical aerial photographs and topographic maps, review of Sanborn Fire Insurance Maps, requests for information from the Houston Fire Department, and an on-site visual assessment of the properties. AmaTerra personnel conducted on-site inspections on May 11, 2022. Interviews with property owners were not conducted, as no response to AmaTerra's requests were received.

5.1 3520 S. Shepherd Drive/2100 Richmond Avenue

AmaTerra found 12 aerial photographs from 1938 through 2016. The photographs confirmed that the property has been cleared and paved since sometime prior to 1938 and featured a building other than the present structure as of 1953. By 1966, the present-day commercial building occupied by several businesses had been constructed. The surrounding area was completely urbanized by this time as well.

Eleven topographic maps depicting the subject property from 1915 to 2019 were obtained. None of the maps provided useful information, as there were no structures or other possible industrial features on or near the subject property from 1915 through 1929, and subsequent maps show no individual structures due to urban density.

Sanborn Fire Insurance Maps from 1950, 1951, 1955, and 1969 were obtained. The combined 1950 and 1951 maps show the subject property to be occupied by a building labeled "Sewing Machine Repair" and the other three corners of the intersection to be occupied by service stations. The 1955 map does not show the property but does depict a building on the south side of Richmond Avenue approximately 200 feet west of the subject property as containing a solvent tank. The 1969 map shows the subject property and includes a label identifying a drycleaning solvent tank, as well as the filling stations on all three other corners of the intersection. As such, there is a REC at the subject property due to the presence of a drycleaner operation on the property in the 1969 Sanborn map.

The database search results showed the property to have been occupied by drycleaners of various names from, at a minimum, 1968 through 2004. Various state hazardous materials database listings document groundwater contamination by chlorinated solvents resulted from these drycleaning operations. Remediation of the groundwater contamination is being managed through the state Drycleaner Remediation Program (DCRP) but is as yet unresolved.

At the time of the site visit, the subject property was in active use as a strip shopping center. It was occupied by several food service and retail businesses. Monitor wells were visible at various locations

on the property. These wells corroborate the presence of the groundwater contamination documented by the hazardous materials database search, and are thus indicative of the same REC.

METRO intends to acquire the southern and southwestern portions of the property as additional ROW. As previously noted, CERCLA exempts municipalities from liability for contaminated properties acquired through eminent domain, so if ROW is acquired in this manner, METRO is exempt from liability. If ROW is acquired through some other means, it is still unlikely that TCEQ would assign METRO as a responsible party for the existing groundwater contamination at the property, and subsequently transfer lead responsibility for remediation to METRO. As a safeguard against legal technicalities that might arise during the acquisition, however, AmaTerra recommended one or both of two possible options for METRO in the process of its acquisition of new ROW from the property:

- METRO's legal counsel should coordinate with TCEQ's legal counsel and DCRP representatives to secure formal agreement that METRO will not be named as a responsible party.
- METRO may enter its acquired portion of the property into the state Innocent Owner/Operator Program (IOP).

5.2 4516 Harrisburg Boulevard

AmaTerra found 12 aerial photographs from 1938 through 2016. The photographs confirmed that the property has been entirely developed since sometime prior to 1938 and included a mix of residential and industrial uses until sometime between 1953 and 1966. By 1966, almost all of the property was devoted to a Stewart & Stevenson industrial complex and remained so through the 2005 photograph. As of 2012, the industrial complex had been demolished and the present-day CVS pharmacy constructed in the easternmost portion of the property, adjacent to S. Lockwood Drive and the proposed elevated section on Segment 4 of the BRT.

A topographic map from 1922 showed what appeared to be a commercial or industrial building on the subject property, indicating that such activity has taken place on the property for at least 100 years. There is nothing on the map to suggest the presence of a REC, however. No individual features of the property are visible on any topographic map before or since.

Sanborn Fire Insurance Maps from 1925, 1951, and 1969 were obtained. The maps confirmed the industrial use of the property visible in aerial photographs and document specific ownership by S&S. The only features in the S&S complex that suggested use of hazardous materials was a room in a central building identified on the 1951 map as being used for grease and oil storage and a paint spraying booth identified on the 1969 map; neither of these uses represents a REC. All three maps indicate the presence of a filling station at the northwest corner of the property; based on its distance (over 1,000 feet) from the proposed BRT underpass, it is not considered a REC.

All three maps indicate a service station at the northwestern corner of Harrisburg Boulevard and S. Lockwood Drive, while the first two maps indicate a dry cleaner at the southeastern corner. As such, there is a REC at the intersection of Lockwood Drive and Harrisburg Boulevard, the northern end of

the proposed underpass, due to potential contamination from either the service station or drycleaner. The former drycleaner is of particular concern for multiple reasons:

- It is directly adjacent to proposed excavations for the underpass
- Chlorinated solvents used in drycleaning tend to be very persistent in the environment
- A study by the State Coalition for Remediation of Drycleaners found that up to 75 percent of historical drycleaners may have contaminated the surrounding environment (Schmidt et al 2001).

These factors suggest a reasonable likelihood that excavations in the northern portion of the underpass will encounter contaminated soils.

The subject property was identified in numerous federal, state, and local databases of properties that use or store hazardous materials and/or generate hazardous waste, including some that indicated that uncontrolled releases had occurred on the property. Further online research of supporting documentation, however, found that documented releases all occurred in the central and western portions of the property, away from the proposed underpass, and that all had been successfully remediated. There was no evidence in database listings or supporting documentation to suggest that any hazardous materials had been released to subsurface media underlying S. Lockwood Drive, in which the underpass would be constructed. There was similarly no direct evidence of such releases from other adjacent or nearby properties identified in various databases. A listing for the service station at the northwest corner of Lockwood and Harrisburg Boulevard, however, indicates that former storage tanks were replaced in 1976, before reporting of leaks was required; as a result, it is possible that the service station could have had releases that went undetected for any part of the 50 years of its existence prior to this time. A listing of historical drycleaners also corroborated the existence of the drycleaners at the southeast corner of the intersection. The combination of these two facilities and the potential for either to have contaminated subsurface soil within the footprint of the proposed underpass thus is considered a REC, independent of the same conclusion based on Sanborn maps.

At the time of the site visit, the subject property was occupied by a CVS pharmacy in its easternmost portion, adjacent to the proposed BRT line, two office buildings, and a parking garage. There are no RECs associated with the subject property itself in its current condition.

The combined presence of a former service station and a former drycleaner at the respective northwest and southeast corners of the intersection of Lockwood Drive and Harrisburg Boulevard, as documented in Sanborn maps and database listings, constitutes a REC, as it implies the possibility of contaminated soils being encountered during excavations for the proposed underpass. To mitigate against hazards associated with potential contamination, AmaTerra recommends that the northern portion of the footprint of the proposed underpass excavation (e.g., the portion between the UPRR line and Harrisburg Boulevard) be assessed through installation of soil borings and collection of soil and groundwater samples. If contamination is found, AmaTerra further recommends that METRO

prepare a plan for contaminated soil and/or groundwater (as appropriate) management and treatment/disposal during construction.

5.3 1025 Lockwood Drive

AmaTerra found 12 aerial photographs from 1938 through 2016. The photographs confirmed that the property has been at least partially developed since even the earliest 1938 photograph and has remained relatively unchanged since at least 1953. For most of its history, it was a manufacturing complex owned by Rheem Manufacturing, although it is presently occupied by Pioneer Freight Group, LLC and Painted Metal Products. The industrial nature of the property is clear; however, there are no specific features in the photographs to suggest the presence of a REC at the subject property. Similarly, the remainder of the area adjacent to the proposed elevated BRT segment shows heavy urbanization and industrialization, but the only clear suggestions of a potential REC are a tank battery at the former Flint Ink facility across Lockwood Drive at 1010 Lockwood and the two adjacent service stations at the intersection of Lockwood Drive and Clinton Drive Records reviews subsequently found that none of these facilities is likely to have resulted in a REC at the location of the elevated BRT segment.

Historical topographic maps show development of the subject property, as well as portions of the surrounding area, starting by 1946/47. Subsequent maps show steady infilling of undeveloped land with commercial/industrial facilities up through 1982, by which time the area has been completely urbanized. There is nothing on the maps to suggest the presence of a REC at the subject property or in the footprint of the proposed elevated segment of the BRT, however.

Sanborn Fire Insurance Maps from 1950 and 1970 were obtained. The maps confirm the industrial use of the property visible in aerial photographs and document specific ownership by Rheem. The only features in the Rheem complex that suggested use of hazardous materials are notations on the 1950 map indicating spray paint booths, a paint storage yard, chemical carts, and vats, and an additional notation on the 1970 map of a small, enclosed area as “Flammables Storage and Mixing.” While records reviews found documentation of releases on the property, all were attributed to underground storage tanks that are not evident on the Sanborn maps. The hazardous material usages implied by the Sanborn maps are thus not considered to be a REC.

Listings for the subject property under three names were found in thirteen federal, state, and local databases of properties that use or store hazardous materials and/or generate hazardous waste. Some indicated that uncontrolled releases had occurred on the property. Further online research of supporting documentation found that groundwater contamination had been addressed through three different state programs over the course of 20 years. Although various files presented confusing and conflicting information concerning groundwater flow directions and the source of contamination by chlorinated solvents, maps of contamination plumes showed no evidence that contaminant concentrations ever exceeded state standards in areas east of the facility, where the elevated segment of the BRT is proposed. AmaTerra was also unable to obtain actual documents stating that investigation or remediation was complete in TCEQ’s online records. It did, however, find that TCEQ’s online Central Registry listing for the facility’s Industrial and Hazardous Waste-Corrective Action

registration references (but does not link to) a technical report on the subject of "Final Site Closeout" from late 2011 and two subsequent outgoing approvals from early 2012; these imply that remediation meeting state cleanup standards had been achieved. As such, the former groundwater contamination at the Rheem complex would be considered a Historical REC on the subject property itself but does not represent a REC at the proposed location of the elevated segment of the BRT.

The facility at 3511 Clinton Drive was found in five databases implying the release of hazardous materials. Online records obtained from TCEQ, however, found no evidence that contamination had been transported offsite to the ROW of Lockwood Drive In addition, all contamination cases had been resolved. As such, the contamination at this facility, while qualifying as a Controlled REC at the property itself, is not considered a REC for the BRT route.

Other facilities adjacent to the proposed elevated BRT segment were also found, through both the database search and records obtained from the Houston Fire Department, to have had releases of hazardous materials. None showed any evidence of having impacted subsurface soils or groundwater beneath Lockwood Drive where the elevated segment of the BRT is proposed.

No RECs are associated with the property or with other properties adjacent to the proposed elevated segment of the BRT line. No Phase I ESA could, and thus AmaTerra does not, however, guarantee that the soil in which supports for the elevated segment of the BRT line would be installed is free of contamination from the subject property, nearby properties identified during the database search, or another unknown source. Based on distances to known releases and the lack of evidence of releases that might have affected soils beneath Lockwood Drive, AmaTerra believes that contamination in the area of the proposed bridge supports is sufficiently unlikely that no further investigation is warranted. As a best practice, however, AmaTerra recommends that construction crews be advised that subsurface contamination is known historically in the area and that the contractor have a contingency plan for soil management in place in the event that excavated soil exhibits staining or a hydrocarbon odor.

6 Summary, Conclusions, and Recommendations

One hundred twenty-five sites adjacent to the original footprint of the proposed BRT line were identified by a 2021 Hazardous Materials Evaluation as having documented releases or storage of bulk quantities of hazardous materials. With conceptual design detail available in 2022 and utility plans made available in 2023, AmaTerra considered sites previously judged to be of low or moderate risk to the Project to determine whether a Phase I ESA would be required to more fully evaluate the legal risk to METRO of acquiring contaminated property and/or the risk of encountering contaminated soil during construction and thus posing a safety risk to construction workers. In addition to the properties previously evaluated, a realignment of a portion of Segment 3 resulted in consideration of two additional properties adjacent to the updated alignment and deletion of one property adjacent to only the former alignment.

Three Phase I ESA's addressing four properties (two of which are adjacent to one another) were undertaken. The first focused on a small shopping center at the northwest corner of Richmond Avenue and S. Shepherd Drive on Segment 2, found in the 2021 evaluation listed as both 3520 S. Shepherd Drive and 2100 Richmond Avenue in various databases. The property is an active groundwater contamination case, currently being remediated through the TCEQ's Drycleaner Remediation Program. Conceptual design drawings showed that ROW would be acquired from the property in the form of a corner clip; as such, concern over legal liability related to the acquisition of ROW from a resolved contamination case suggested the need for a Phase I ESA. The Phase I ESA confirmed the ongoing groundwater investigation and remediation process at the property through records searches and documentation of numerous monitoring wells in the shopping center parking lot observed during the field investigation. The ESA concluded that the property poses low risk to the BRT Project; it did, however, recommend as a precautionary measure that METRO's legal counsel coordinate with its TCEQ counterparts to secure assurance that METRO would not be held liable for remediation costs following its acquisition of new ROW, in case the ROW was acquired through some means other than eminent domain or there was another legal loophole to the CERCLA exemption. As an alternative recommended precautionary measure, the ESA also noted that METRO could enroll its ROW acquired from the property in the TCEQ Innocent Owner/Operator Program.

The former S&S property at 4516 Harrisburg Boulevard was the site of historical releases that contaminated soil and groundwater. The locations of these releases on the property, however, are sufficiently distant that they are unlikely to have impacted soils affected by excavation for the underpass. The property is thus not considered a REC itself. Sanborn maps and database listings for two nearby properties, however, present a REC in the area of the intersection of Lockwood Drive and Harrisburg Boulevard and suggest the possibility that excavations in the northern portion of the underpass footprint, between the UPRR line and Harrisburg Boulevard, may encounter contamination. AmaTerra recommends that METRO conduct an assessment of subsurface soils between the UPRR line and Harrisburg Boulevard through installation of soil borings and collection of soil and groundwater samples and develop a plan for management of contaminated soil and/or groundwater during construction should the assessment identify contamination.

The remaining properties- the adjacent 5311 Clinton Drive and 1025 Lockwood Drive (northwest corner of Clinton Drive and Lockwood Drive and west side of Lockwood Dr)., also on Segment 4- were locations of documented groundwater releases at which deep excavation for bridge supports is planned for the Lockwood Drive ROW, downgradient of the properties. As such, it appeared possible that construction crews could encounter contaminated soils during construction at either location; therefore, Phase I ESA's were undertaken at both locations. Records were obtained during the Phase I ESA's identifying locations of groundwater plumes and other contamination. There was no evidence that contamination had migrated off-site from either property into the ROW of Lockwood Drive. It thus appears that the likelihood of construction crews encountering contaminated soils during installation of bridge supports is low. Nevertheless, the ESA recommended, as a precautionary measure, that construction crews be made of aware of historical subsurface contamination of adjacent properties and that METRO have a soil management plan in

place in case hydrocarbon odors, oily sheens, or other evidence of residual contamination is observed in excavated soils.

Consideration of the regulatory status of each listed property, the absence or nature of documented contamination, the probable hydrogeologic relationship of a hazardous materials property to the proposed BRT route, and other site-specific factors a variety of other site-specific factors during the initial evaluation based on conceptual designs resulted in the determination that Phase I ESA's were not required for 122 of the 126 properties evaluated.

The extent to which METRO will acquire ROW through eminent domain or other mechanisms has not been determined. CERCLA exempts municipalities from liability for hazardous materials contamination of property acquired through eminent domain, so the legal risk to METRO for acquisition of any property in this manner is eliminated. It is very unlikely that CERCLA liability would accrue to METRO for any ROW acquired by other means, considering that TCEQ has granted closure to all but two known hazardous materials cases studied (implying that TCEQ-mandated cleanup criteria have been met and no further action is required) and the fact that METRO is only acquiring strips of ROW rather than entire parcels and associated sources of contamination at any of these properties. Even so, the same precautionary recommendation made in the Phase I ESA of the property at 3520 S. Shepherd applies to the entire BRT Project as well: it is advised that METRO legal counsel coordinate with TCEQ legal counsel to secure agreement that METRO will not be liable for costs of hazardous materials remediation in ROW that it acquires.

Based on utility maps provided in 2023, it appears that excavation of subsurface soils at approximately 70 locations adjacent to hazardous materials sites is planned. At present, the specific depth of excavations at any particular location has not been determined. As such, the likelihood of encountering residual contamination from known past releases at these properties, or undiscovered contamination at any property, cannot be assessed. For this reason, the same recommendation made in the Phase I ESA of 1025 Lockwood Drive/5311 Clinton Drive is recommended for the sites of excavations as well: AmaTerra recommends that METRO develop a soil management plan in advance of construction to be implemented in the event that evidence of contamination is discovered. The plan should address soil handling procedures to be followed, health and safety measures to be instituted, sampling frequency, laboratory analyses to be performed, disposal procedures, City of Houston requirements for compatible materials, and other measures to be taken. As the Project design is further refined, the need for Phase II investigations or environmental monitoring during construction can be assessed. For the purposes of NEPA, such a plan is sufficient to address mitigation of potential impacts of hazardous materials on the BRT Project.

1 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

1.1 Purpose of Report

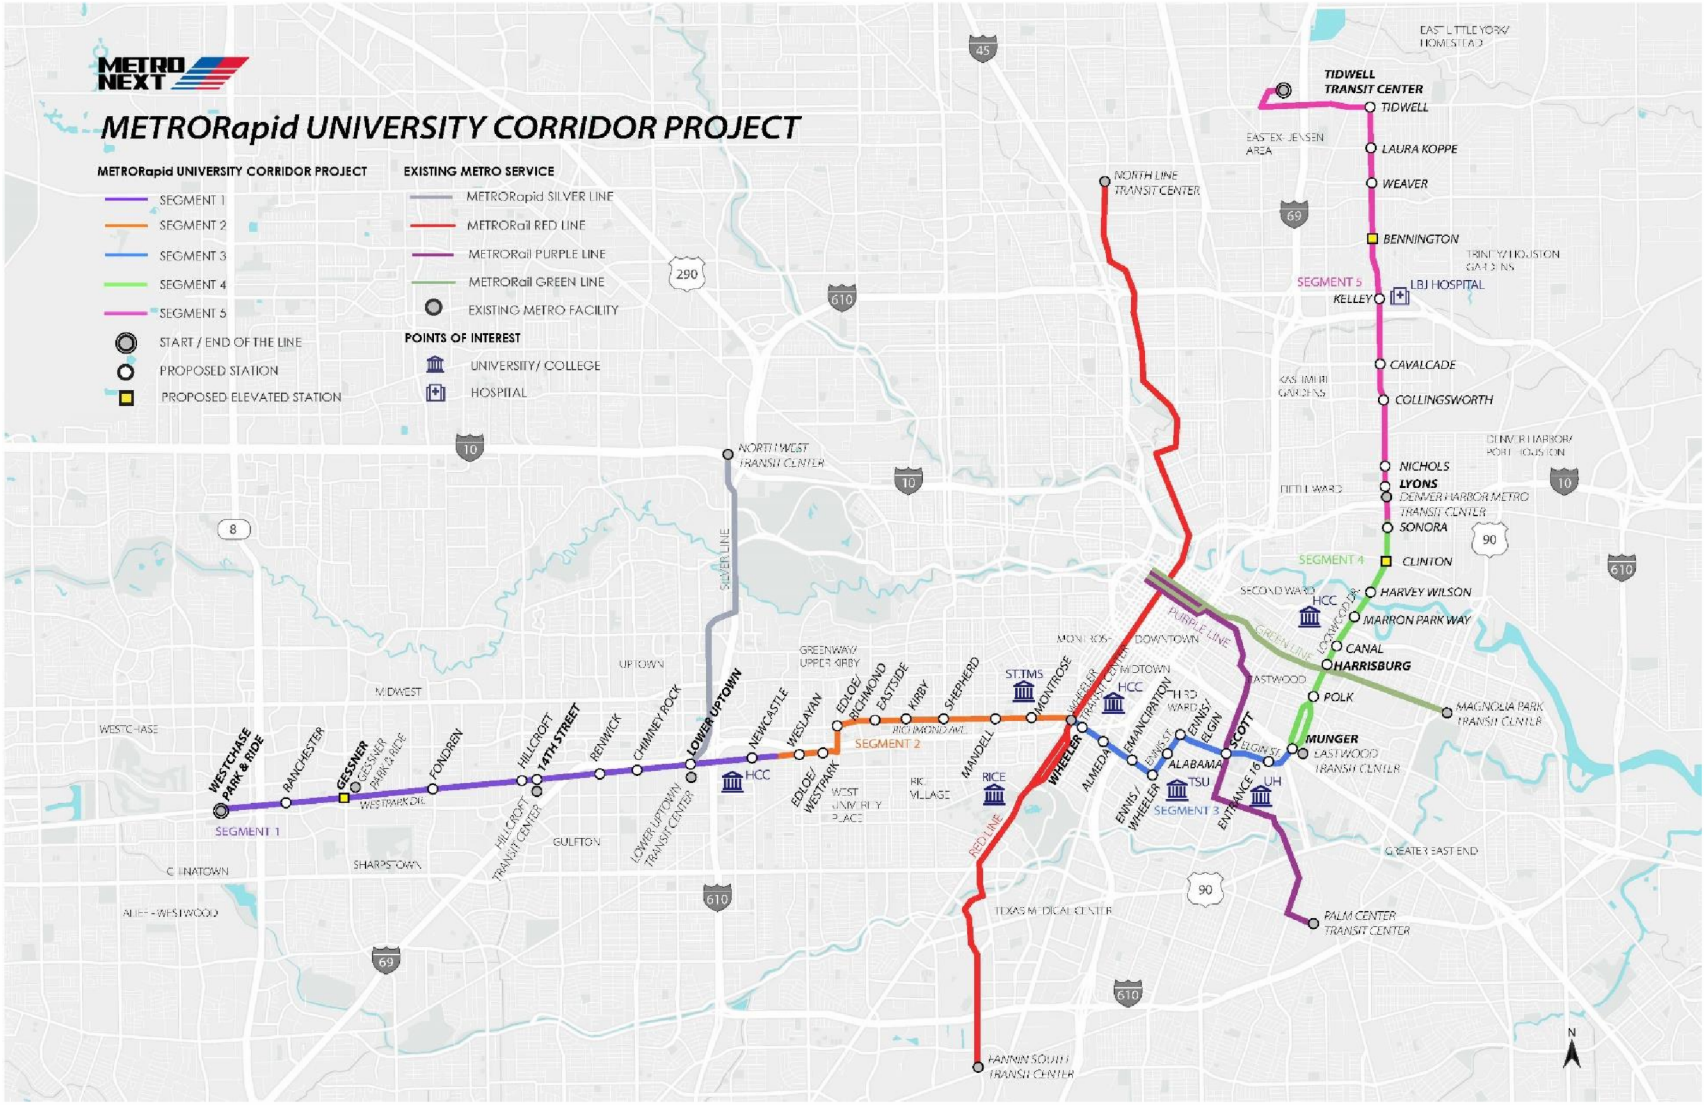
The purpose of this technical report is to present the results of a noise and vibration assessment prepared for the University Corridor Bus Rapid Transit (University BRT) project in Houston, Texas. As the project will result in a change to noise and vibration sources, an assessment adhering to FTA's "Transit Noise and Vibration Impact Assessment" methodology was prepared in support of the Categorical Exclusion.

1.2 Project Overview

The Project is a proposed 25.3-mile BRT line from Westchase Park & Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit- dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park & Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1. Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.

The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other METRORail, METRORapid, and local bus services. Some stations would be incorporated into existing METRO facilities. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.



METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 9:30 PM to 12:30 AM. Weekend service

would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

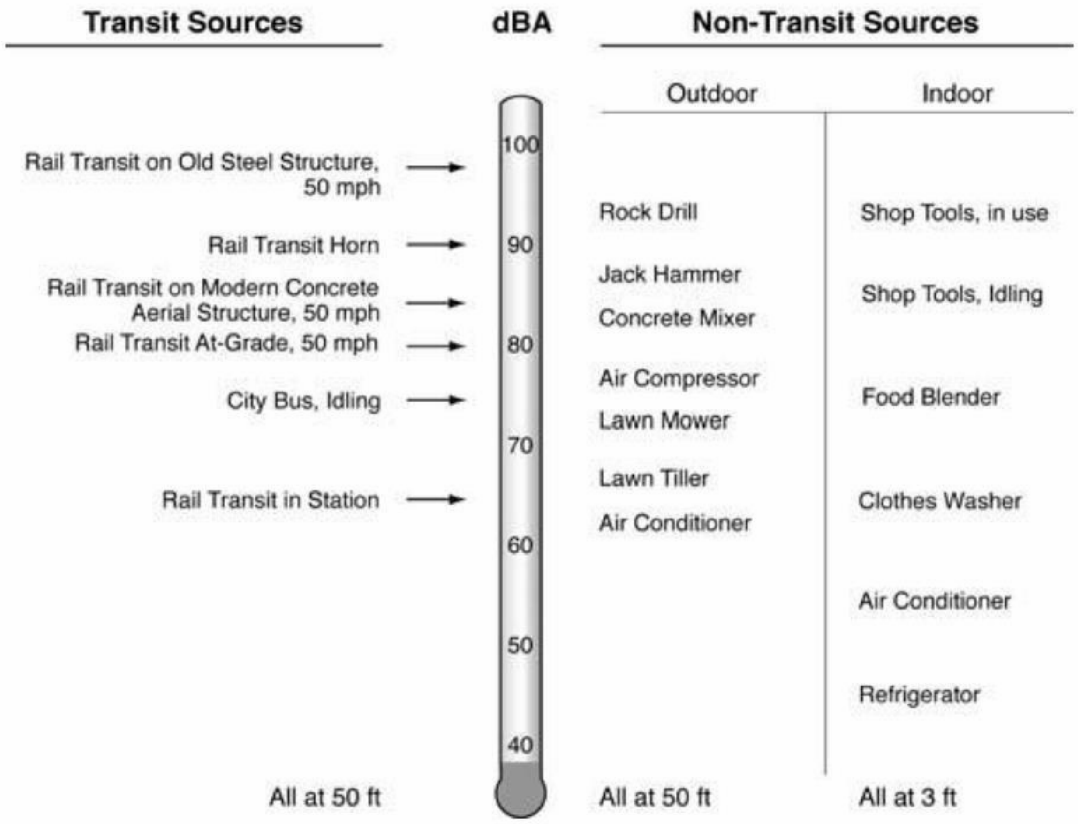
2 Fundamentals of Noise and Vibration

2.1 Noise Fundamentals



Sound is created when a disturbance or vibration induces pressure waves in the air. Sound is characterized by various parameters: the pressure level of a given sound (amplitude), the rate of oscillation (frequency or pitch), and time pattern (variability). When sound is unwanted, it is categorized as noise. Typical sound levels of transit and non-transit sources are provided in **Figure 2-1**.

The frequency of a sound is the rate of physical oscillation, measured in oscillations per second, or Hertz (Hz). To humans, this manifests as pitch, or the lowness (rumble) or highness (hiss) of a sound. Sound pressure level can vary by over one million times within the range of human hearing. The decibel (dB) scale is a logarithmic loudness scale used to reflect this wide range. Environmental noise is a combination of all outdoor noise sources. When combined, sources such as distant traffic, wind in trees, and distant industrial or farming activities often create a low-level background noise in which no particular individual source is identifiable (FTA 2018).

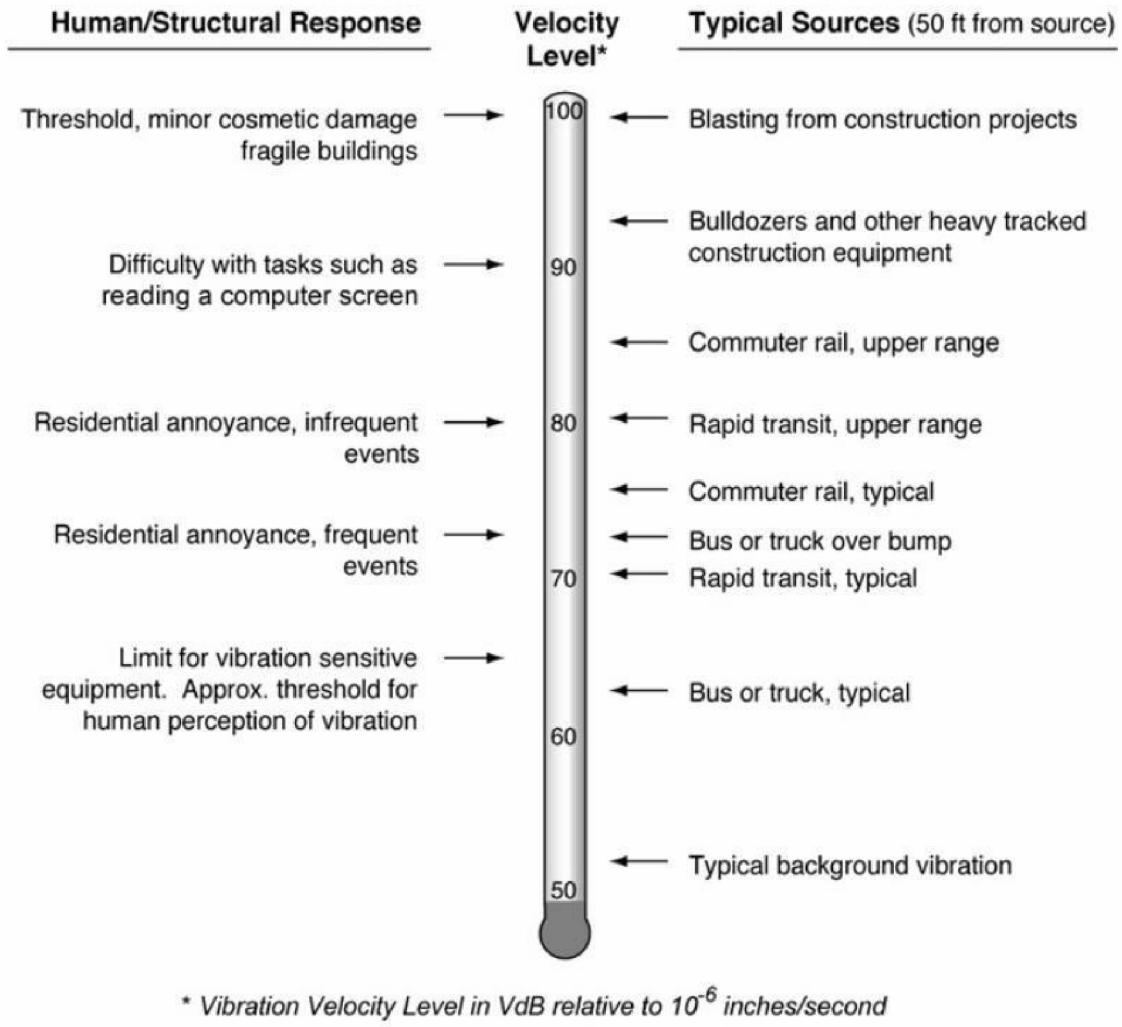
Because the human auditory system does not respond equally to all frequencies of sound, human response to noise uses A-weighted sound levels, where the sound has been filtered to reduce the strength of very low and very high-frequency sounds to emulate the human response to sound levels. The A-weighted sound level correlates well with human response, and the overall A-weighted sound level is denoted in decibels expressed as “dBA.” On the dBA scale, the normal range of human hearing extends from 0 dBA to about 140 dBA. Under real-world conditions changing a sound by 1 dBA cannot be perceived; a 3-dBA change is considered a perceptible difference, while a 5-dBA change is readily noticeable. A 10-dBA increase in the level of continuous noise represents a perceived doubling of loudness (FTA 2018).

Noise exposure over time is typically expressed in terms of an equivalent steady-state energy level, referred to as Leq, or equivalent noise level, that represents the average acoustical energy of a given measurement over a specified time period. Because community receptors are more sensitive to unwanted noise intrusion during the evening and at night, a 24-hour noise descriptor called the day- night noise level (Ldn) is often used for environmental studies; this level adds a 10 dBA penalty to nighttime noise levels to account for the increased sensitivity. The 10 dBA penalty applies from 10 PM to 7 AM.

Figure 2-1: Typical Sound Levels of Transit and Non-Transit Noise Sources

Source: FTA 2018.

A receptor's distance from a noise source affects how noise levels attenuate (decrease). Transportation noise sources tend to be arranged in a line, and continuous roadway traffic attenuates at a rate of 3.0 dBA to 4.5 dBA per doubling of distance from the source, depending on the ground conditions which can absorb sound. Point sources of noise, such as stationary equipment or construction equipment, typically attenuate at a rate of 6.0 dBA per doubling of distance from the source. For example, a sound level of 80 dBA at 50 feet from a point noise source will be reduced to 74 dBA at 100 feet and 68 dBA at 200 feet. Noise levels can also be attenuated by "shielding" or providing a barrier between the source and the receptor. With respect to interior noise levels, the noise reduction provided by the exterior shell of the building depends on whether windows are closed or open. Based on the United States Environmental Protection Agency (U.S. EPA) national average, closed windows reduce noise levels by approximately 25 dBA, while open windows reduce noise levels by about 15 dBA (U.S. EPA, 1974).



2.2 Vibration Fundamentals

Vibration can be interpreted as energy transmitted in waves through the ground. Vibration generally dissipates with distance from the vibration source (e.g., pile driving) due to geometric spreading and inherent damping in the intervening ground. The vibration transmitted to a receiving person or building is influenced by soil type and distance between source and receptor, building construction

(if applicable), and duration. For humans, the response to vibration is also influenced by the number of perceived events. A scale of typical source levels and response levels are provided in **Figure 2-2.**

If the amplitude is high enough, ground vibration can cause structural damage. To assess the potential for structural damage associated with vibration, the vibratory ground motion in the vicinity of the affected structure is measured in terms of peak particle velocity (PPV) in the vertical and horizontal directions (vector sum), typically in units of inches per second (in/sec). Minor cosmetic damage to fragile buildings can occur at vibration levels as low as 0.12 in/sec PPV depending on building condition and construction (FTA, 2018).

Figure 2-2: Typical Levels of Ground-Borne Vibration

Source: FTA 2018.

3 Regulatory Setting

Because this project is funded by the FTA, the impact assessment is based on guidance from the FTA's *Transit Noise and Vibration Impact Assessment Manual* (2018), hereinafter denoted FTA Manual, as well as the City of Houston Noise Ordinance (Chapter 30).

The FTA Manual establishes procedures, criteria, and modeling tools for predicting and assessing noise and vibration impacts of transit projects. Assessing potential noise and vibration impacts in relation to established criteria and methods such as the FTA methodology is consistent with NEPA.

3.1 FTA Guidance

3.1.1 Operations Noise

FTA operational noise impact criteria are outlined in Section 4.1 of the FTA Manual.

Two tables from Section 4.1 of the FTA Manual are presented below. **Table 3-1** provides detailed land use category descriptions as well as the impact assessment metric for each category. **Figure 3-1** defines the *moderate* and *severe* impact threshold for each category, based on existing noise exposure. In the context of the NEPA process, either a *moderate* or *severe* impact would be considered a significant adverse effect. These criteria are also applicable to evaluate potential noise impacts from temporary relocation of the UPRR tracks for the UPRR undercrossing.

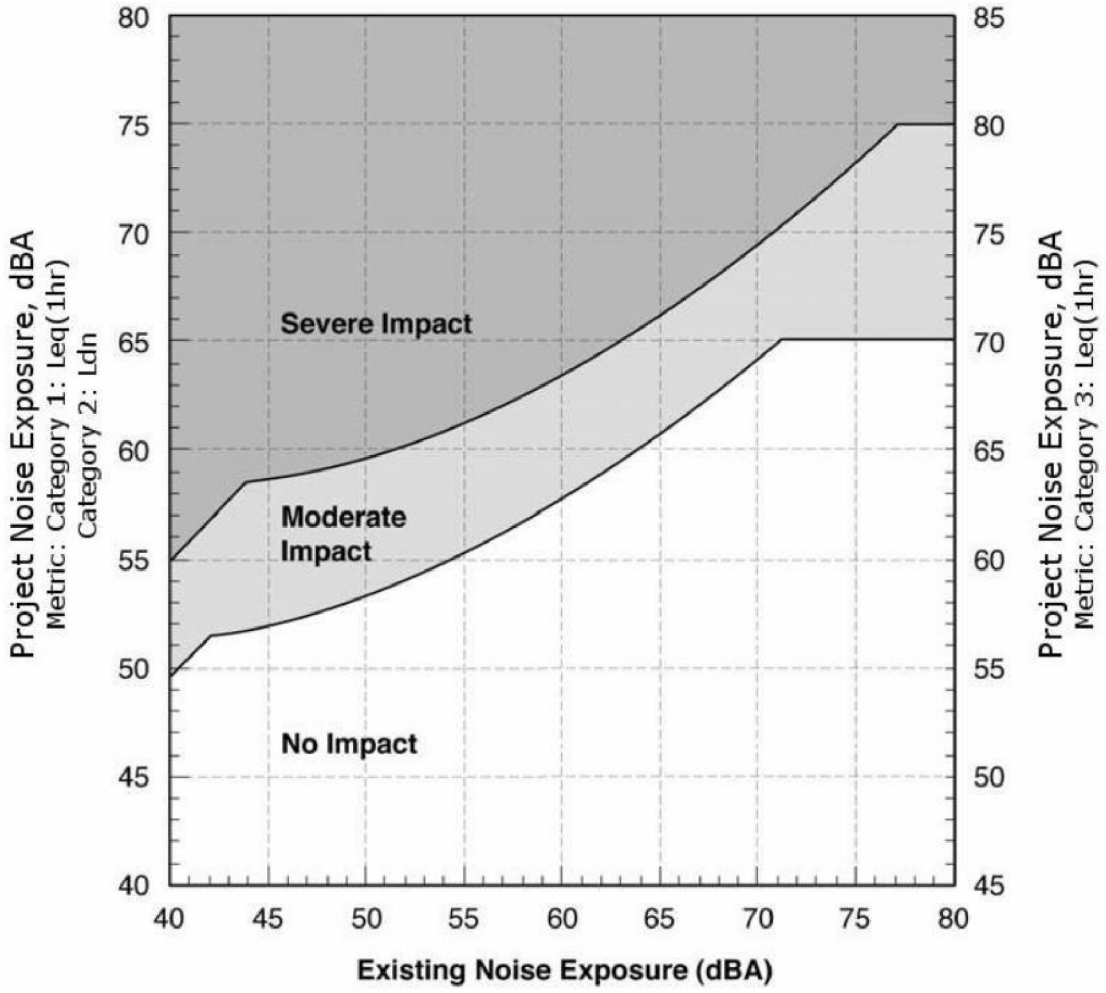


Table 3-1: FTA Land Use Categories

Land Use Category	Land Use Type	Noise Metric, dBA	Description of Land Use Category
1	High Sensitivity	Outdoor $L_{eq(1hr)}$*	Land where quiet is an essential element of its intended purpose. Example land uses include preserved land for serenity and quiet, outdoor amphitheaters and concert pavilions, and national historic landmarks with considerable outdoor use. Recording studios and concert halls are also included in this category.
2	Residential	Outdoor L_{dn}	This category is applicable all residential land use and buildings where people normally sleep, such as hotels and hospitals.
3	Institutional	Outdoor $L_{eq(1hr)}$*	This category is applicable to institutional land uses with primarily daytime and evening use. Example land uses include schools, libraries, theaters, and churches where it is important to avoid interference with such activities as speech, meditation, and concentration on reading material. Places for meditation or study associated with cemeteries, monuments, museums, campgrounds, and recreational facilities are also included in this category.

* $L_{eq(1hr)}$ for the loudest hour of project-related activity during hours of noise sensitivity.

Source: FTA 2018.

Figure 3-1: FTA Noise Impact Criteria

Source: FTA 2018.

3.1.2 Construction Noise

FTA construction noise impact criteria are outlined in Section 7.1 of the FTA Manual.

As the City of Houston construction noise regulations are more conservative than FTA, a lower criterion of 85 dBA is used as the primary impact level for residential receivers, as opposed to the 90 dBA suggested by FTA. The City of Houston noise ordinance is discussed in **Section 3.2**.

3.1.3 Operations Vibration

FTA operational vibration impact criteria are outlined in Section 6.2 of the FTA Manual.

The FTA ground-borne vibration criteria are outlined in **Table 3-2**. In addition to these criteria, FTA also identifies a ground-borne vibration criterion for TV studios of 65 VdB and ground-borne noise criterion of 25 dBA. These criteria are also applicable to evaluate potential vibration impacts from temporary relocation of the UPRR tracks for the UPRR undercrossing.

Table 3-2: FTA Vibration Impact Criteria

Land Use Category	GBV Impact Levels (VdB re 1 micro-inch /sec)			GBN Impact Levels (dBA re 20 micro Pascals)		
	Frequent Events	Occasional Events	Infrequent Events	Frequent Events	Occasional Events	Infrequent Events
Category 1: Buildings where vibration would interfere with interior operations.	65 VdB*	65 VdB*	65 VdB*	N/A**	N/A**	N/A**
Category 2: Residences and buildings where people normally sleep.	72 VdB	75 VdB	80 VdB	35 dBA	38 dBA	43 dBA
Category 3: Institutional land uses with primarily daytime use.	75 VdB	78 VdB	83 VdB	40 dBA	43 dBA	48 dBA

* This criterion limit is based on levels that are acceptable for most moderately sensitive equipment such as optical microscopes. For equipment that is more sensitive, a Detailed Vibration Analysis must be performed.
** Vibration-sensitive equipment is generally not sensitive to ground-borne noise; however, the manufacturer's specifications should be reviewed for acoustic and vibration sensitivity.

Source: FTA 2018.

3.1.4 Construction Vibration

FTA construction noise impact criteria are outlined in Section 7.2 of the FTA Manual.

The FTA vibration damage impact level for each building category is shown in **Table**

3-3. *Table 3-3: FTA Construction Damage Criteria*

Building/ Structural Category	PPV, in/sec	Approximate L_v*
I. Reinforced-concrete, steel or timber (no plaster)	0.5	102
II. Engineered concrete and masonry (no plaster)	0.3	98
III. Non-engineered timber and masonry buildings	0.2	94
IV. Buildings extremely susceptible to vibration damage	0.12	90

*RMS velocity in decibels, VdB re 1 micro-in/sec

The FTA's vibration annoyance criteria are based on the same land use categories as the noise impact criteria, in addition to considering the frequency of the vibration events. The most conservative vibration annoyance criteria for frequent events are utilized in the construction vibration impact assessment.

3.2 City of Houston Noise Ordinance

The City of Houston's noise ordinance is defined in Chapter 30 – Noise and Sound Level Regulation in the Code of Ordinances. The ordinance defines maximum permissible sound levels which apply at the property line of the residential or non-residential receiver. For construction noise, the ordinance also defines a higher permissible noise limit of 85 dBA between the hours of 7 AM to 8 PM. Construction noise outside those defined hours would still be subject to the standard maximum permissible sound levels listed in **Table 3-4** and **Table 3-5**.

Table 3-4: City of Houston Maximum Permissible Sound Levels

City of Houston Maximum Permissible Sound Levels		
Time Periods	Daytime	Nighttime
Receiving Property	8 AM – 10 PM	10 PM – 8 AM
Residential	65 dBA	58 dBA
Non-residential	68 dBA	68 dBA

4 Methodology

The potential for noise and vibration impacts from the project were evaluated using procedures described in the FTA Manual.

4.1 Noise Analysis Procedure

The FTA Manual has three levels of analysis that may be used, depending on the type and scale of the project, the stage of project development, and the environmental setting. The three levels of analysis are:

- Noise Screening Procedure
- General Noise Assessment
- Detailed Noise Analysis

The screening procedure is used to identify noise-sensitive land uses in the vicinity of a project and whether there is likely to be an impact. For BRT projects, the screening distances are 500 feet from the proposed alignment in unobstructed areas and 250 feet in areas where there are intervening buildings.

The Project is located along an existing roadway corridor, in an urban setting, and would not considerably increase the number of vehicles on the roadway. The Project would add up to 10 vehicles per hour in each direction on a given section of roadway. Because noise-sensitive receptors were determined to be present based on the screening procedure, the next level of analysis for the noise-sensitive receptors is a general or detailed noise assessment.

For the Project, the screening procedure and detailed noise assessment were conducted. A detailed assessment was chosen over a general assessment because all the necessary inputs required for a detailed assessment have been established in the Project design, including the specific lane alignment, the operations schedule, speed profile, and vehicle type. A general assessment is normally conducted in the early stages of project development and when specific details are not available. The detailed noise assessment was completed using models based on the FTA's noise exposure computation equations. The models determine the level of impact that noise may have on a receptor ranging from "none" to "severe." The model calculates the level of impact by using existing noise readings, distance of the receptor to the noise source, bus noise reference levels, the operations schedule, intervening rows of buildings, FTA land use categories, and the FTA noise impact criteria curves. The following assumptions were used in the detailed noise assessment.

- Operations schedule
    - Weekday: 6-minute headways from 6:30 AM to 7:00 PM. 12-miniute headways from 4:00 AM to 6:30 AM and from 9:30 PM to 12:30 AM.
    - Weekend: As the number of buses run on the weekend is lower, only the more conservative weekday schedule was modeled.
- Speed
    - 55 miles per hour (mph) along the dedicated Metro-owned ROW
    - 35 mph on Houston city streets.
- Bus reference noise level: 82 dBA sound exposure level (SEL) at 50 feet and 50 mph.
    - 82 dBA SEL is the FTA refence level for diesel buses. The New Flyer XE60 articulated battery-electric buses proposed for the Project are expected to generate lower noise levels, and thus this assessment would be conservative (higher than expected).
- Noise-sensitive receptors were grouped into "clusters" following the FTA Manual guidelines with each cluster represented by a single existing noise measurement. The clusters were selected based on proximity to the Project as well as other major noise sources, such as highways. This information was used to determine the noise impact thresholds for moderate and severe impacts.

4.2 Vibration Analysis Procedure

Per the FTA Manual, projects that involve rubber-tire vehicles and do **not** meet the conditions listed below, vibration impacts are unlikely, and no further analysis is needed. Because the rubber tires and suspension systems of buses provide vibration isolation, it is unusual for buses to cause ground- borne vibration problems.

- **Roadway irregularity** – Expansion joints, speed bumps, or other design features that result in unevenness in the road surface can result in perceptible ground-borne vibration at distances up to 75 feet away.
- **Operation close to vibration-sensitive buildings** – Buses, trucks, or other heavy vehicles operating close to a vibration-sensitive building (within approximately 100 feet from the

property line) may impact vibration-sensitive activities, such as research that uses electron microscopes or manufacturing of computer chips.

- **Vehicles operating within buildings** – Special considerations are often required for shared- use facilities where vehicles operate inside or directly underneath buildings such as bus stations located inside an office building complex.

Because the Project alignment would run entirely on new or re-paved roadway without speed bumps, it is assumed that roadway irregularities would not be present. The alignment also does not go through or underneath any buildings. Therefore, a vibration screening procedure was used to identify the potential for vibration impacts at highly sensitive FTA Category 1 receivers or Special Building only. If no highly vibration-sensitive land uses are located within the defined screening distance of 100 feet, then no further vibration assessment is necessary. If highly vibration-sensitive land uses are identified, a vibration assessment is conducted individually for each Category 1 or special building receiver based on the FTA's generalized ground surface vibration equations for rubber-tired transit vehicles and the vibration criteria outlined in **Section 3.1.3**.

For special use buildings where ground-borne noise from vibration sources would also be of concern, the ground-borne vibration level was converted to ground-borne noise by applying a conversion factor of -50 to -20 dB. The FTA procedure for converting ground-borne vibration to ground-borne noise is shown in **Figure 4-1**. If necessary, the specific conversion factor can be identified via further analysis of the ground vibration and site-specific measurements of the existing condition.

Figure 4-1: Conversion to ground-borne noise

Conversion to Ground-borne Noise			
Noise Level in dBA	Peak frequency of ground vibration:		Use these adjustments to estimate the A-weighted sound level given the average vibration velocity level of the room surfaces. See text for guidelines for selecting low-, mid-, or high-frequency characteristics. Use the high-frequency adjustment for subway tunnels in rock or if the dominant frequencies of the vibration spectrum are known to be 60 Hz or greater.
	Low frequency (<30 Hz)	-50 dB	
	Mid Frequency (peak 30 to 60 Hz)	-35 dB	
	High frequency (>60 Hz)	-20 dB	

Source: FTA 2018.

4.3 Noise and Vibration Analysis during Construction

For purposes of this analysis the effects from high level sources such as pile driving are addressed, but specific construction methods have not yet been determined in the Project description.

4.3.1 Construction Noise Analysis Procedure

Noise impacts from construction may vary greatly depending on the duration and complexity of the project. The FTA Manual has two levels of construction noise analysis that may be used, either a Qualitative Construction Noise Assessment or a Quantitative Construction Noise Assessment. The

Quantitative Assessment is further divided into a General Assessment or a Detailed Analysis. For the University Project, a General Quantitative Construction Noise Assessment has been conducted in this report. The construction noise analysis has been completed utilizing models developed from the FTA's construction noise propagation equations.

In a General Quantitative Assessment, a separate assessment is made for each phase of construction. For the University BRT Project, the assessment is split into demolition, paving, bridgework, and underpass construction phases. For the General Quantitative Assessment, a conservative estimate of the noise for each phase is achieved assuming the two noisiest pieces of equipment are operating continuously. An hourly equivalent noise level (Leq) is then calculated from the selected equipment for each phase. The estimated construction noise levels are then compared against the relevant criterion and appropriate noise reduction measures are selected.

Table 4-1 shows typical equipment that could potentially be used for each phase of construction, along with reference noise levels at 50 feet. This equipment is likely to be both stationary and mobile.

Table 4-1: Noise Levels of Typical Equipment used in Construction

Phase	Equipment	Equipment Leq @ 50 ft
Demolition	**Concrete saw**	90 dBA
	Jackhammer	88 dBA
	Mounted impact hammer (hoe ram)	90 dBA
	Excavator or Dozer	85 dBA
	Dump truck	84 dBA
	Air compressor	80 dBA
Paving	Paver	85 dBA
	Roller	85 dBA
	Compactor	82 dBA
	Grader	85 dBA
	Dump truck	84 dBA
	Air compressor	80 dBA
Bridges	**Impact Pile Driver**	101 dBA
	Crane	83 dBA
	Concrete Pump truck	82 dBA
	Concrete Mixer truck	85 dBA
	Dump truck	84 dBA
	Front End Loader	80 dBA
	Auger Drill Rig	85 dBA
Underpasses	**Impact Pile Driver**	101 dBA
	Concrete Pump truck	82 dBA
	Concrete Mixer truck	85 dBA
	Dump Truck	84 dBA
	Excavator or Dozer	85 dBA
	Auger Drill Rig	85 dBA
	Roller	85 dBA
	Rail Saw	90 dBA
BOLD text indicates the two noisiest pieces of equipment in each analysis phase		

Source: FTA 2018.

The City of Houston Maximum Permissible Construction Sound Levels are shown in **Table 3-5**. Construction noise impacts would be identified for any sensitive receiver that falls within the calculated impact distance. The most straightforward way to reduce community impact is to avoid construction at high-annoyance times. The analysis assumes that no construction would be done at

night when the residential receivers, which make up most receivers along the alignment, have a lower impact threshold.

4.3.2 Construction Vibration Analysis Procedure

As with the construction noise assessment, the FTA outlines two levels of construction vibration assessment. Either a Qualitative Construction Vibration Assessment or a Quantitative Construction Vibration Assessment can be used to determine impact distances. For the University Project, a Quantitative Construction Vibration Assessment was performed. The construction vibration analysis was completed utilizing models developed from the FTA's construction vibration propagation equations.

In a Quantitative Construction Vibration Assessment, the estimated vibration level is calculated by selecting vibration reference levels, defined by the FTA, of appropriate construction equipment. Unlike the construction noise assessment which assesses cumulative noise by phase, vibration impact is assessed for each piece of construction equipment separately. The Peak Particle Velocity (PPV) metric is utilized when assessing construction vibration damage potential and is reported in inches per second (in/sec). The RMS velocity level (Lv) is utilized when assessing vibration annoyance impact and is reported in vibration decibels (VdB). Vibration damage and annoyance criteria are outlined in **Table 3-3** and **Table 3-2** respectively. Estimated construction vibration levels are compared against both damage and annoyance criteria, and appropriate vibration reduction measures are selected. Buildings along the alignment are assumed to be non-engineered timber and masonry construction (Type 3).

While the exact methods to construct the project have yet to be determined, **Table 4-2** shows typical equipment that could be used for each phase of construction, along with reference vibration levels at 25 feet.

Table 4-2: Vibration Levels of Typical Equipment Used in Construction

Phase	Equipment	Equipment PPV @ 25 ft	Equipment Lv @ 25 ft
Demolition	Jackhammer	0.035 in/sec	79 VdB
	Mounted impact hammer (hoe ram)	0.089 in/sec	87 VdB
	Large bulldozer	0.089 in/sec	87 VdB
	Loaded trucks	0.076 in/sec	86 VdB
Paving	Vibratory roller	0.210 in/sec	94 VdB
	Large bulldozer	0.089 in/sec	87 VdB
	Loaded trucks	0.076 in/sec	86 VdB
Bridges	Pile driver (impact) - typical	0.644 in/sec	104 VdB
	Pile driver (impact) - upper range	1.518 in/sec	112 VdB

	Pile driver (sonic) - typical	0.17 in/sec	93 VdB
	Pile driver (sonic) – upper range	0.734 in/sec	105 VdB
	Caisson drilling	0.089 in/sec	87 VdB
	Loaded trucks	0.076 in/sec	86 VdB
Underpass	Pile driver (impact) - typical	0.644 in/sec	104 VdB
	Pile driver (impact) - upper range	1.518 in/sec	112 VdB
	Pile driver (sonic) - typical	0.170 in/sec	93 VdB
	Pile driver (sonic) – upper range	0.734 in/sec	105 VdB
	Caisson drilling	0.089 in/sec	87 VdB
	Vibratory roller	0.210 in/sec	94 VdB
	Loaded trucks	0.076 in/sec	86 VdB

Source: FTA 2018

The buffer distances to determine vibration annoyance impacts are calculated based on FTA Equation 7-2, shown in **Figure 4-2**. Damage impact distances are based on FTA Equation 7-3, shown in **Figure 4-3**. Construction vibration impacts would be identified for any sensitive receiver that falls within the calculated damage or annoyance impact distances.

Figure 4-2: FTA Equation 7-2 – Construction Vibration PPV

$$PPV_{equip} = PPV_{ref} \times (\frac{25}{D})^{1.5} \qquad \textbf{Eq. 7-2}$$

where:

PPV_{equip} = the peak particle velocity of the equipment adjusted for distance, in/sec

PPV_{ref} = the source reference vibration level at 25 ft, in/sec

D = distance from the equipment to the receiver, ft

Source: FTA 2018.

Figure 4-3: FTA Equation 7-3 - Construction Vibration Velocity Level

$$L_{v.distance} = L_{vref} - 30log(\frac{D}{25}) \quad \textbf{Eq. 7-3}$$

where:

$L_{v.distance}$ = the rms velocity level adjusted for distance, VdB
L_{vref} = the source reference vibration level at 25 ft, VdB
D = distance from the equipment to the receiver, ft

Source: FTA 2018.

Ground-borne noise for Special Buildings can be calculated by using the same procedure described in **Section 4.2**.

4.3.3 UPRR Operations on Temporary Shoofly

During construction of the UPRR underpass, the UPRR tracks would be temporarily relocated up to 15 feet to the south to facilitate reconstruction of the UPRR bridge. The incremental effect of freight trains in this temporary configuration has been evaluated by determining the expected change in the noise using the Detailed Noise Assessment described in the FTA Manual for rail analysis and criteria presented in **Figure 3-1** and the change in vibration using the General Vibration Assessment procedures provided by FTA and the criteria presented in **Table 3-2**.

The freight train speed is assumed to be 25 mph for current and future operations with the single- track grade crossing and with the shoofly. The FTA train horn noise model assumes that trains are uniformly distributed over daytime and nighttime hours (62.5% and 37.5%, respectively) and was adjusted to match the existing noise measurements conducted at LT-9. Adjustments for the vibration analysis include jointed tracks and wood-framed buildings with raised-floor resonance.

5 Existing Conditions

5.1 Existing Noise Environment

Existing noise measurements were made at 22 locations along the proposed alignment. The measurements were made in July of 2022 over a period of at least two days at each location. The sound level meters were hung on utility poles approximately 10 feet above the ground near the addresses listed in **Table 5-1** below. The locations for the measurements were selected to represent clusters of sensitive receivers based on their proximity to major noise sources, such as highways, arterial roads, or rail lines. The measured Ldn and peak hour Leq levels are used to assess the estimated increase in the ambient noise level due to the project. Maps of the existing noise measurement locations are presented in Appendix A.

It should be noted that the LT14 and LT13 locations were selected in 2022 based on the then-current Segment 3 alignment which has since shifted. As the updated alignment maintains a similar offset to Highway 288, which is the dominant noise source in the area, it is assumed the that ambient noise levels measured at LT14 and LT13 are still representative of the ambient noise levels along the

reconfigured section of Segment 3. **Figure A-5** of **Appendix A** illustrates the location of LT14 and LT13 in relation to the current alignment.

The average Ldn and peak hour Leq for each existing noise measurement is presented in Table 5-1. The average Ldn was calculated by averaging the 24-hour Ldn for each day of the measurement period. The average peak hour Leq was calculated by averaging both the morning and evening peak hour Leq for each day of the measurement period. Both weekday and weekend measurements were included. As ambient noise is generally lower on the weekends, including weekend ambient noise results in a conservative (lower) existing noise level compared to a typical weekday. Thunderstorm noise was also excluded from the LT1, LT4, LT5, and LT6 measurements by replacing data points during the storm with the mean of the hour before and after the storm period. Rain directly impacting the microphone housing generates increased noise levels. Excluding rain and thunder noise results in a conservative (lower) existing noise level.

Table 5-1: Existing Noise Measurements Summary

Number	LT Number	Approximate Address	City	Avg Ldn (dBA)	Avg Pk Hr Leq (dBA)
1	LT1	9678 Edell St	Houston, TX	64.9	63.3
2	LT2	3811 Tidwell Rd		78.5	77.4
3	LT3	9009 Lockwood Dr		75.5	74.8
4	LT4	7719 Lockwood Dr		74.3	77.7

6 Environmental Consequences

Temporary construction impacts are identified for sensitive receivers that would fall within the buffer distances discussed in **Section 6.1**. No noise or vibration impacts have been identified for Project bus operations as discussed in **Section 6.2**.

6.1 Short-Term Construction Impacts

6.1.1 Noise

During the construction phase of the project, there would be temporary increases in the ambient noise level near active construction sites. The estimated construction noise level at 50 feet is 93 dBA during the demolition phase, 88 dBA during paving, and up to 101 dBA during bridge and underpass phases if impact pile drivers are utilized. All four modeled phases could exceed the daytime City of Houston Maximum Permissible Construction Sound Level of 85 dBA for residential receivers. Construction noise impacts have been identified for residential receivers at distances of up to 126 feet during demolition, 71 feet during paving, and 320 feet during impact pile driving. Utilizing drilled piles instead of impact driven piles would reduce the noise impact buffer distance for residential receivers to 71 feet for the bridge and underpass phases. Construction outside of the hours of 7 AM to 8 PM would be done according to City of Houston ordinance requirements.

6.1.2 Vibration

During the construction phase of the project, there would be temporary increases in ground-borne vibration levels near active construction sites. Estimated vibration levels at 25 feet and the distances within which damage and annoyance criteria would be exceeded are summarized in **Table 6-1**, with building damage impact distances for Type III buildings shown. As shown in **Table 3-3**, FTA Type I (reinforced-concrete, steel, or timber) and Type II (engineered concrete, and masonry) buildings have higher impact criteria for building damage than Type III buildings (non-engineered timber & masonry), thus the information shown in **Table 6-1** are conservative. No Type IV (extremely susceptible to vibration damage) buildings were identified during the screening procedure.

Phase	Equipment	Vibration level @ 25 ft	Distance to damage impact for Type III buildings	Distance to annoyance impact for residential receivers	Distance to annoyance impact for institutional receivers
Demolition	Jackhammer	79 VdB	8 ft	43 ft	34 ft
	Mounted impact	87 VdB	15 ft	79 ft	63 ft

	hammer (hoe ram)				
	Large bulldozer	87 VdB	15 ft	79 ft	63 ft
	Loaded trucks	86 VdB	13 ft	73 ft	58 ft
Paving					
	Large bulldozer	87 VdB	15 ft	79 ft	63 ft
	Loaded trucks	86 VdB	13 ft	73 ft	58 ft
Bridges	Pile driver (impact) - typical	104 VdB	55 ft	291 ft	232 ft
	Pile driver (impact) – upper range	112 VdB	97 ft	539 ft	428 ft
	Pile driver (sonic) - typical	93 VdB	22 ft	125 ft	100 ft
	Pile driver (sonic) – upper range	105 VdB	59 ft	315 ft	250 ft
	Caisson drilling	87 VdB	15 ft	79 ft	63 ft
	Loaded trucks	86 VdB	13 ft	73 ft	58 ft
Underpass	Pile driver (impact) - typical – **Not anticipated**	104 VdB	55 ft	291 ft	232 ft
	Pile driver (impact) – upper range - **Not anticipated**	112 VdB	97 ft	539 ft	428 ft
	Pile driver (sonic) - typical	93 VdB	22 ft	125 ft	100 ft
	Pile driver (sonic) – upper range[1]	105 VdB	59 ft	315 ft	250 ft
	Caisson drilling	87 VdB	15 ft	79 ft	63 ft

	Vibratory roller	94 VdB	26 ft	135 ft	107 ft
	Loaded trucks	86 VdB	13 ft	73 ft	58 ft
Note: If subsurface obstacles such as large boulders are encountered during vibratory driving, vibration could reach the upper range.					

Table 6-1: Estimated Construction Vibration Levels and Distance Within Which Impacts Could Occur

Source: Wilson Ihrig 2023.

Vibration Damage

The construction vibration damage impact threshold for Type III buildings could be exceeded within 55 feet of typical impact pile driving and 22 feet of typical vibratory (sonic) pile driving. The need for impact pile driving and the specific locations where impact pile driving would occur are still undetermined at this stage of the Project.

Without impact pile driving, construction damage impacts are unlikely to occur for any phase of roadway construction, except for a vibratory roller operating near a single building. Use of a vibratory roller within 26 feet of any Type III building could exceed the Type III building damage criteria. One building in Segment 2, located on parcel HR26719, is 25 feet from the alignment. This building is closer than the 26 feet buffer distance corresponding to the damage threshold for vibratory rolling near Type III buildings.

Vibration Annoyance

The construction of the Project has the potential to exceed the FTA vibration annoyance criteria, on a temporary basis. These temporary vibration impacts would be minimized by using the best management practices discussed in **Section 7.2.2**.

Construction vibration has the potential to cause annoyance impacts at residential receivers within 79 feet during hoe ram demolition operations, 135 feet during vibratory roller operations, 125 feet during typical vibratory (sonic) pile driving, and up to 539 feet if impact pile drivers are utilized. Utilizing drilled piles would reduce the distance at which the impact threshold would be exceeded to 79 feet, from 539 feet.

Pile driving is not anticipated near the highly sensitive Houston Public Media recording (and broadcast) studio, however, the operation of a vibratory roller within 235 feet of the building has the potential to exceed the 65 VdB impact criteria for Category 1 receivers and special buildings. The ground-borne noise would also range from 10 to 40 dBA, which could exceed the 25 dBA impact criteria.

6.1.3 UPRR Operations

During construction of the UPRR undercrossing, freight trains will operate on tracks relocated up to 15 feet to the south (shoofly) for a period up to 8 months. The temporary change in noise levels

has been estimated, and the results are summarized in **Table 6-2**. The noise would increase slightly at homes on the south side of the railroad and decrease slightly for homes on the north side of the railroad. The temporary noise at two homes would increase by 1.5 to 1.6 dBA and exceed the severe noise thresholds of 1.1 and 1.0, respectively.

Table 6-2: Shoofly Horn Noise General Noise Assessment Summary

Segment	Land Use Category	Building Distance to Center Existing Railroad (ft.)	Railroad Speed (mph)	Existing Noise Ldn** (dBA)	Estimated Temporary Shoofly Noise Ldn* (dBA)	Noise Impact Criteria (dBA)		Number of Impacts	
						Moderate	Severe	Moderate	Severe
4	1	-	-	-	-	-	-	-	-
	2	25 – 130	25	74 – 85	75 – 82	65	75	0	2
	3	-	-	-	-	-	-	-	-
*Shoofly would move the single track to the south, with the resulting range of 40 to 124 ft. **Modeled existing noise based on results measured at LT-9 and extrapolated for distance									

The temporary change in vibration levels has also been estimated, and the results are summarized in **Table 6-3**. The vibration would increase slightly at homes on the south side of the railroad and decrease slightly for homes on the north side of the railroad. The estimated existing condition currently exceeds the FTA criterion at 6 residences, and the temporary shoofly would have the same impacts at the same residences. In no case would the vibration increase by 5 decibels or more.

Table 6-3: Shoofly Generalized Vibration Assessment Summary

Segment	Land Use Category	Building Distance to Center Existing Track* (ft.)	Railroad Speed (mph)	Existing Vibration (VdB)	Estimated Temporary Shoofly Vibration (VdB)	Vibration Impact Criteria (VdB)	Number of Impacts	
						Infrequent	Existing	Shoofly
4	1	-	-	-	-	-	-	-
	2	25 – 130	25	76 – 90	76 – 86	80	6	6
	3	-	-	-	-	-	-	-
*Shoofly would move the single track up to 15 ft. to the south, with the resulting range of 40 to 124 ft. distances								

6.1.4 Construction Impacts Significance Conclusions

While the construction of the Project has the potential to exceed the City of Houston construction noise criteria, construction noise impacts would only occur when there is active construction within the impact distance of a given receiver. Based on the progressive nature of roadway construction work it is anticipated that the duration of active construction within the impact distances would be

a week or less at any single receiver for each phase. Therefore, the construction noise impacts for roadway construction could be considered less than significant due to the inherently limited duration and would not require mitigation. These temporary noise impacts could be minimized by using the best management practices discussed in **Section 7.2.1.**

The duration of construction for the UPRR underpass along Lockwood Drive may be longer than the other roadwork phases. However, of the equipment modeled for underpass construction, only a pile driver and rail saw have the potential to exceed the City of Houston construction noise criteria at 50 ft or greater. It is anticipated that these pieces of equipment will only be utilized during a small portion of the construction process and that most of the work will be related to earth and concrete work, which is not predicted to exceed the daytime construction noise criteria. The noise impacts for underpass construction could be considered less than significant due to the limited duration and would not require mitigation. These temporary noise impacts could be minimized by using the best management practices discussed in **Section 7.2.1.**

The construction of the Project has the potential to exceed the FTA building damage criteria for Type III buildings at a single building if a vibratory roller capable of generating vibration levels consistent with the suggested FTA source level operates within 26 feet. This impact could potentially be significant. Realistically, the weight of different vibratory rollers can vary by an order of magnitude. Alternative compacting methods such as plate compactors could also be utilized in place of a vibratory roller. As the type of compactor, the amplitude settings, and the extents of construction are undetermined at this stage of the Project, a final determination of significance is not made for compaction operations.

The construction of the Project has the potential to exceed the FTA vibration annoyance criteria, on a temporary basis, at residential receivers if equipment such as hoe ram, vibratory roller, or impact pile drivers would be used. As with the construction noise impacts, construction vibration annoyance impacts would only occur when there is active construction within the impact distance to a given receiver. Based on the progressive nature of roadway construction work it is anticipated that the duration of active construction within the impact distances would be a week or less at any single receiver for each phase. Therefore, the construction vibration annoyance impacts could be considered less than significant due to the inherently limited duration and would not require mitigation. These temporary vibration impacts could be minimized by using the best management practices discussed in **Section 7.2.2**.

The construction of the Project UPRR underpass has the potential to exceed the FTA vibration annoyance criteria on a temporary basis at residential receivers if equipment such as vibratory roller or sheet pile drivers would be used. As with the construction noise impacts, construction vibration annoyance impacts would only occur when there is active construction within the impact distance to a given receiver. The UPRR underpass construction phases (UPRR bridge reconstruction, UPRR shoofly, drilled secant shaft wall, sheet piles, excavation, and concrete panel installation), would each occur over several weeks up to approximately 3 months. Based on the progressive nature of the UPRR underpass and related construction work it is anticipated that the duration of active

construction within the impact distances would be a week or less at any single receiver for each phase. Therefore, the construction vibration annoyance impacts could be considered less than significant due to the inherently limited duration and would not require mitigation. These temporary vibration impacts could be minimized by using the best management practices discussed in **Section**
7.2.2.The construction of the Project has the potential to exceed the FTA vibration annoyance criteria and interfere with operations at recording studios for Houston Public Media if a vibratory roller is operated within 235 feet of the building. This impact would be potentially significant. These temporary vibration impacts could be minimized by using the best management practices discussed in **Section 7.2.2**.

The temporary change in UPRR operations on the shoofly during construction of the UPRR undercrossing on Lockwood Drive has the potential to increase freight train noise and vibration on the south side of the existing tracks where the UPRR tracks would be relocated by up to 15 feet. This noise increase would exceed the severe noise increase threshold at two residences, which would be potentially significant. It is estimated that the vibration from freight trains on the UPRR tracks currently exceed the 80 VdB criterion at six residences; with the shoofly the vibration would increase but there would be no change in the number of impacted residences. These temporary noise and vibration impacts could be considered less than significant due to the limited duration of these effects and would not require mitigation. These temporary noise and vibration impacts could be minimized by using the best management practices discussed in **Section 7.2.2**.

6.2 Long-Term Operational Impacts

6.2.1 Noise

BRT

The detailed noise assessment conducted for BRT operations did not identify any conditions where the project would exceed the noise criteria; there would be no noise impacts at any sensitive receivers along the proposed alignment. The operation of water pumps associated with the UPRR underpass are not predicted to result in an exceedance of FTA or City of Houston noise criteria at nearby residences. The pumps will be located 30+ feet underground and will not be directly exposed to the environment. Additionally, the pumps will only be operated for a limited duration on an as- needed basis. A summary of the detailed noise assessment is provided in **Table 6-4**.

Table 6-4: Detailed Noise Assessment Summary

Segment	Land Use Category	Building Distance to Near Lane (ft.)	Speed (mph)	Existing Noise Ldn/Pk Hr Leq* (dBA)	Estimated Project Noise Ldn/Pk Hr Leq* (dBA)	Noise Impact Criteria (dBA)		Number of Impacts

UPRR

The UPRR undercrossing would provide a grade-separation which could reduce horn soundings as trains approach and travel on the new Lockwood Drive UPRR bridge. This would dramatically reduce the noise levels in this area by at least 10 dBA depending on train schedule and number of cars per train.

6.2.2 Vibration

The vibration assessment did not identify any conditions where the Project would exceed the vibration criteria at sensitive receivers. Only a single highly vibration sensitive (FTA Category 1) receiver, the Houston Public Media recording studio, located at 4343 Elgin Street, Houston, TX 77004, was identified along the alignment. The estimated BRT vibration level at the interior of the Houston Public Media building is 60 VdB, which would be below the 65 VdB impact criteria for highly sensitive receivers. The corresponding ground-borne noise level inside Houston Public Media without accounting for building isolation features would be 10 to 40 dBA and could potentially exceed the impact criterion of 25 dBA. As noted above, a site review of the facilities would be instructive to determine if the building already includes vibration reduction measures to isolate the noise sensitive facilities from the existing bus traffic.

6.2.3 Operations Impacts Significance Conclusions

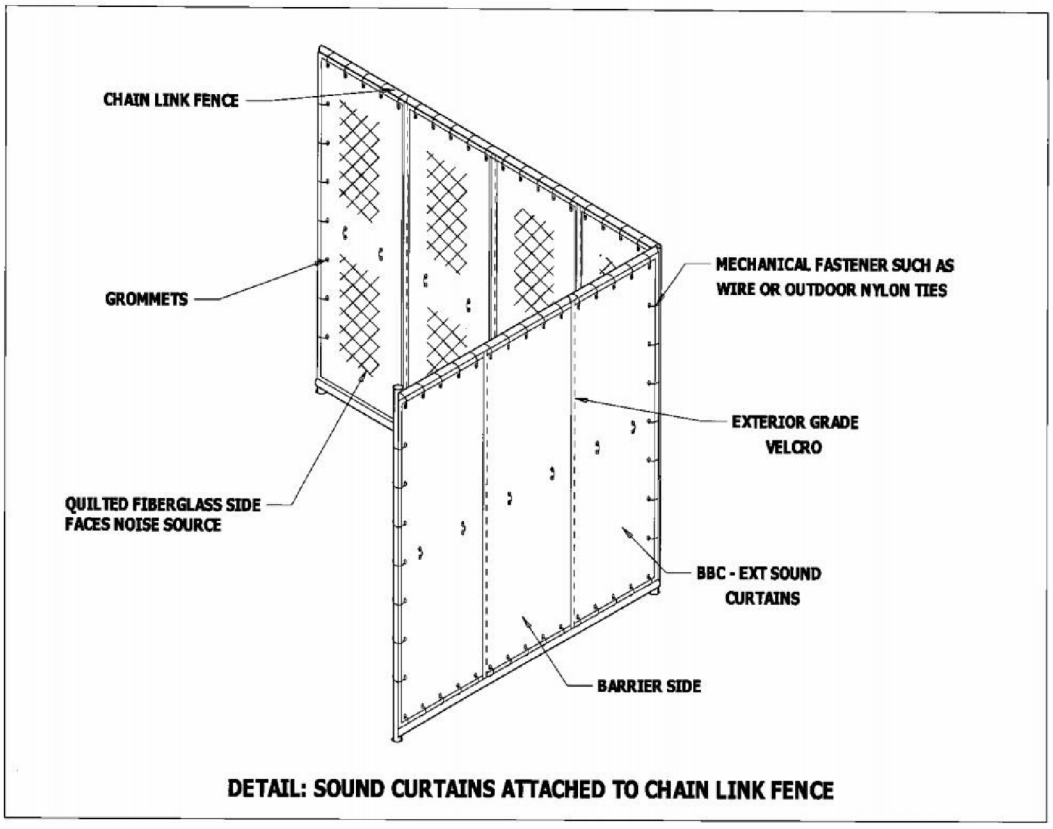
There would be no significant operational impacts as no noise and vibration impacts would occur from the operation of the Project, except for the possibility of ground borne noise impacts at the Houston Public Media studios. This impact would be potentially significant, as the Houston Public Media building may already include isolation features. It should also be noted that existing bus lines operate along Elgin Street. Thus, while the Project has the potential to exceed the FTA ground-borne noise criteria at the Houston Public Media building, an increase over the existing levels of ground- borne noise is not anticipated.

7 Noise and Vibration Minimization Measures & Best Management Practices

7.1 Operations

Except as noted for Houston Public Media, the University BRT project would not result in operational noise or vibration impacts. To confirm whether the project would impact Houston Public Media, conduct a site-specific assessment of the existing noise to determine if the existing facilities incorporate reduction measures to isolate the studios from traffic and other noise sources.

To minimize the effects of BRT operations on adjacent receivers, it is recommended that Metro keep the roadway in a good state of repair and minimize discontinuities in the pavement, such as potholes and uneven expansion joints as a best management practice. Large discontinuities would increase noise and vibration generated by the buses and may cause localized annoyance impacts.



7.2 Construction

While the means and methods for constructing the Project have yet to be established, the following are recommended best management practices for minimizing temporary construction impacts.

7.2.1 Noise

- Erect temporary construction noise barriers around work zones, where feasible. Construction noise barriers normally consist of acoustic blankets installed on chain link fencing. See **Figure 7-1.** Where feasible, the height of the noise barriers shall be determined so that the line of sight between the noise sources and the residential windows are blocked; this would provide at least 5 dBA noise reduction.
    - Place the barriers close to the noise source (hoe rams, jackhammers, saws, compressors, pile drivers, etc.) to increase their effectiveness.
    - At the UPRR undercrossing, noise barriers should be installed along the underpass excavation area along Lockwood Drive, similar to the layout plan shown in **Figure 7-2**.

Figure 7-1: Example of Temporary Construction Noise Barrier

Source: Acoustical Surfaces 2023.

Figure 7-2 Example of Noise Barrier Plan for UPRR Underpass at Lockwood Drive

- Avoid the use of impact pile drivers.
    - If foundation piles are required for the construction of new bridges, drilled piles generate noise levels approximately 10 dBA lower than vibratory pile driving, and up to 16 dBA lower than impact pile driving.
- Construction equipment should be in good condition with applicable noise suppressing devices properly installed and operating.
    - Newer equipment is generally quieter.
- The sound rating on backup and motion alarms should be site appropriate; alarms which adjust the alarm sound level based on the ambient noise are preferred (e.g., "smart" alarms).
- Whenever possible, position stationary noise sources such as generators and compressors as far away as possible from noise sensitive areas.

7.2.2 Vibration

- As noted in **Section 7.1**, conduct a site-specific assessment of the existing vibration at the Houston Public Media building to determine if the existing facilities incorporate reduction measures to isolate the studios from traffic vibration.
- Use buffer distances to limit vibration impacts.
    - Manage vibration-generating equipment to operate them beyond the buffer distances.
- Avoid the use of impact pile drivers.
    - If foundation piles are required for the construction of new bridges, drilled piles generate vibration levels 6 VdB lower than vibratory pile driving, and up to 25 VdB lower than impact pile driving.
- Low impact demolition.
    - Consider these or similar methods: expanding mortar, concrete saws and similar techniques that break the existing roadway into smaller parts and which minimize the use of traditional demolition equipment (e.g., hoe-rams and jackhammers) to reduce vibration.
- Use lower-impact compaction methods.
    - Plate compactors or jumping jack compactors are not capable of causing building damage impacts at Type III buildings at any distance.
    - Utilize smaller, lighter weight models of vibratory rollers.
- Coordinate vibration-intensive construction with Houston Public Media.

- Schedule compaction activities when the recording studio is not in use to eliminate the potential for impact.

7.2.3 UPRR Shoofly

- To reduce noise from UPRR operations on the shoofly, the height of the noise barrier should also block line of sight between the locomotive horn and the windows of the residences. Construction noise barriers could be placed as noted above in **Figure 7-2**.
- If it is feasible to do so, reducing UPRR train speed from 25 mph to 15 mph would reduce vibration by 4 decibels. While six receptors currently experience vibration that exceeds the 80 VdB FTA criterion, reducing the speed would also reduce the number of impacts from six to three.

1 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston (COH), Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

1.1 Purpose of Report

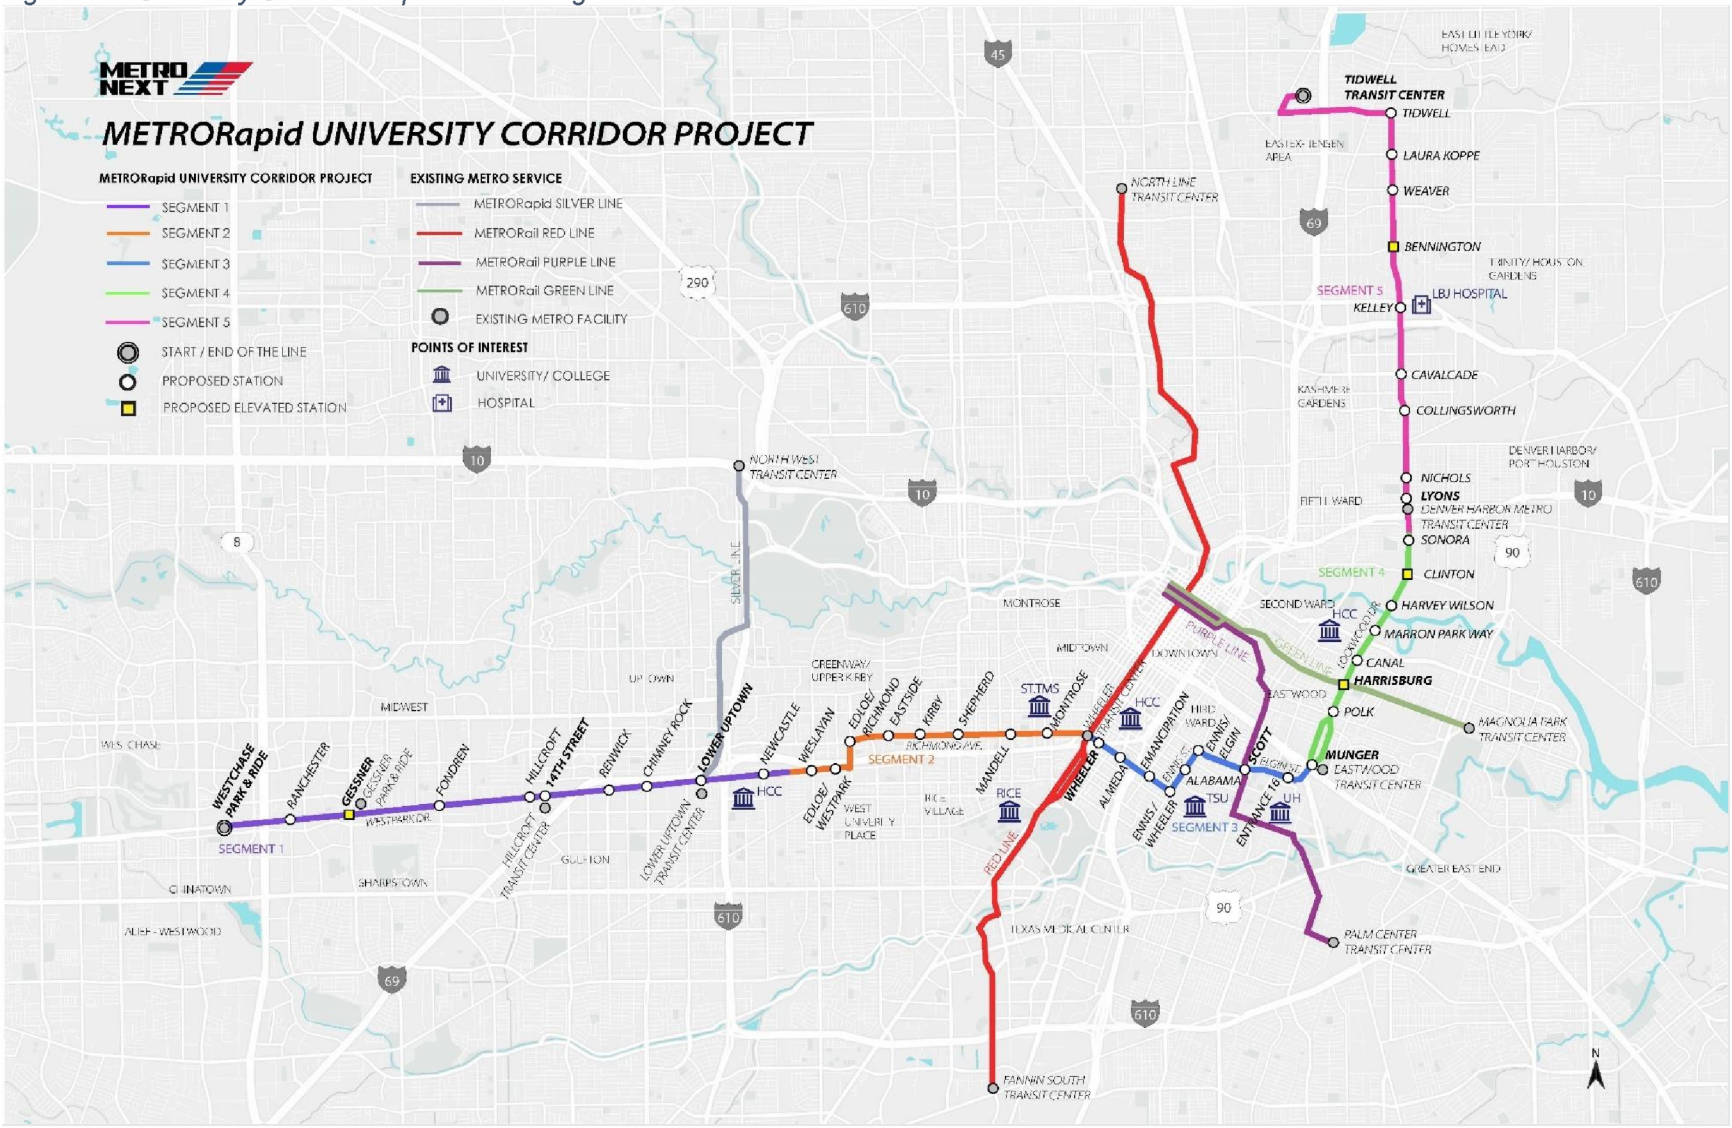
The purpose of this Biological Resources Report is to identify existing conditions and evaluate the potential effects of the Project on biological resources such as threatened and endangered species, critical habitat, and vegetation. This report is based on the 30 percent preliminary engineering design. This design will be refined to further reduce real estate impacts as the Project design advances.

1.2 Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park and Ride in the west to the Tidwell Transit Center in the northeast. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way (ROW) from Westchase Park and Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the COH. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1. Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.

The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other services like METRORail, METRORapid, and local bus services. Two stations would be incorporated into existing METRO service like, Westchase Park and Ride and Tidwell Transit Center. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.



METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 7:00 PM to 12:30 AM. Weekend service

would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

Table 1-1: University Corridor Segments

Segment	From	To
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Dr
2	Westpark Dr 1,500 feet east of UPRR tracks, east of Newcastle Dr	Richmond Ave at US-59
3	Richmond Ave at US-59	Elgin Street at I-45 (Eastwood Transit Center)
4	Elgin Street at I-45 (Eastwood Transit Center)	Lockwood Drive at Margarita Street
5	Lockwood Dr at Margarita St.	Tidwell Transit Center

Figure 1-1: University Corridor Proposed BRT Alignment

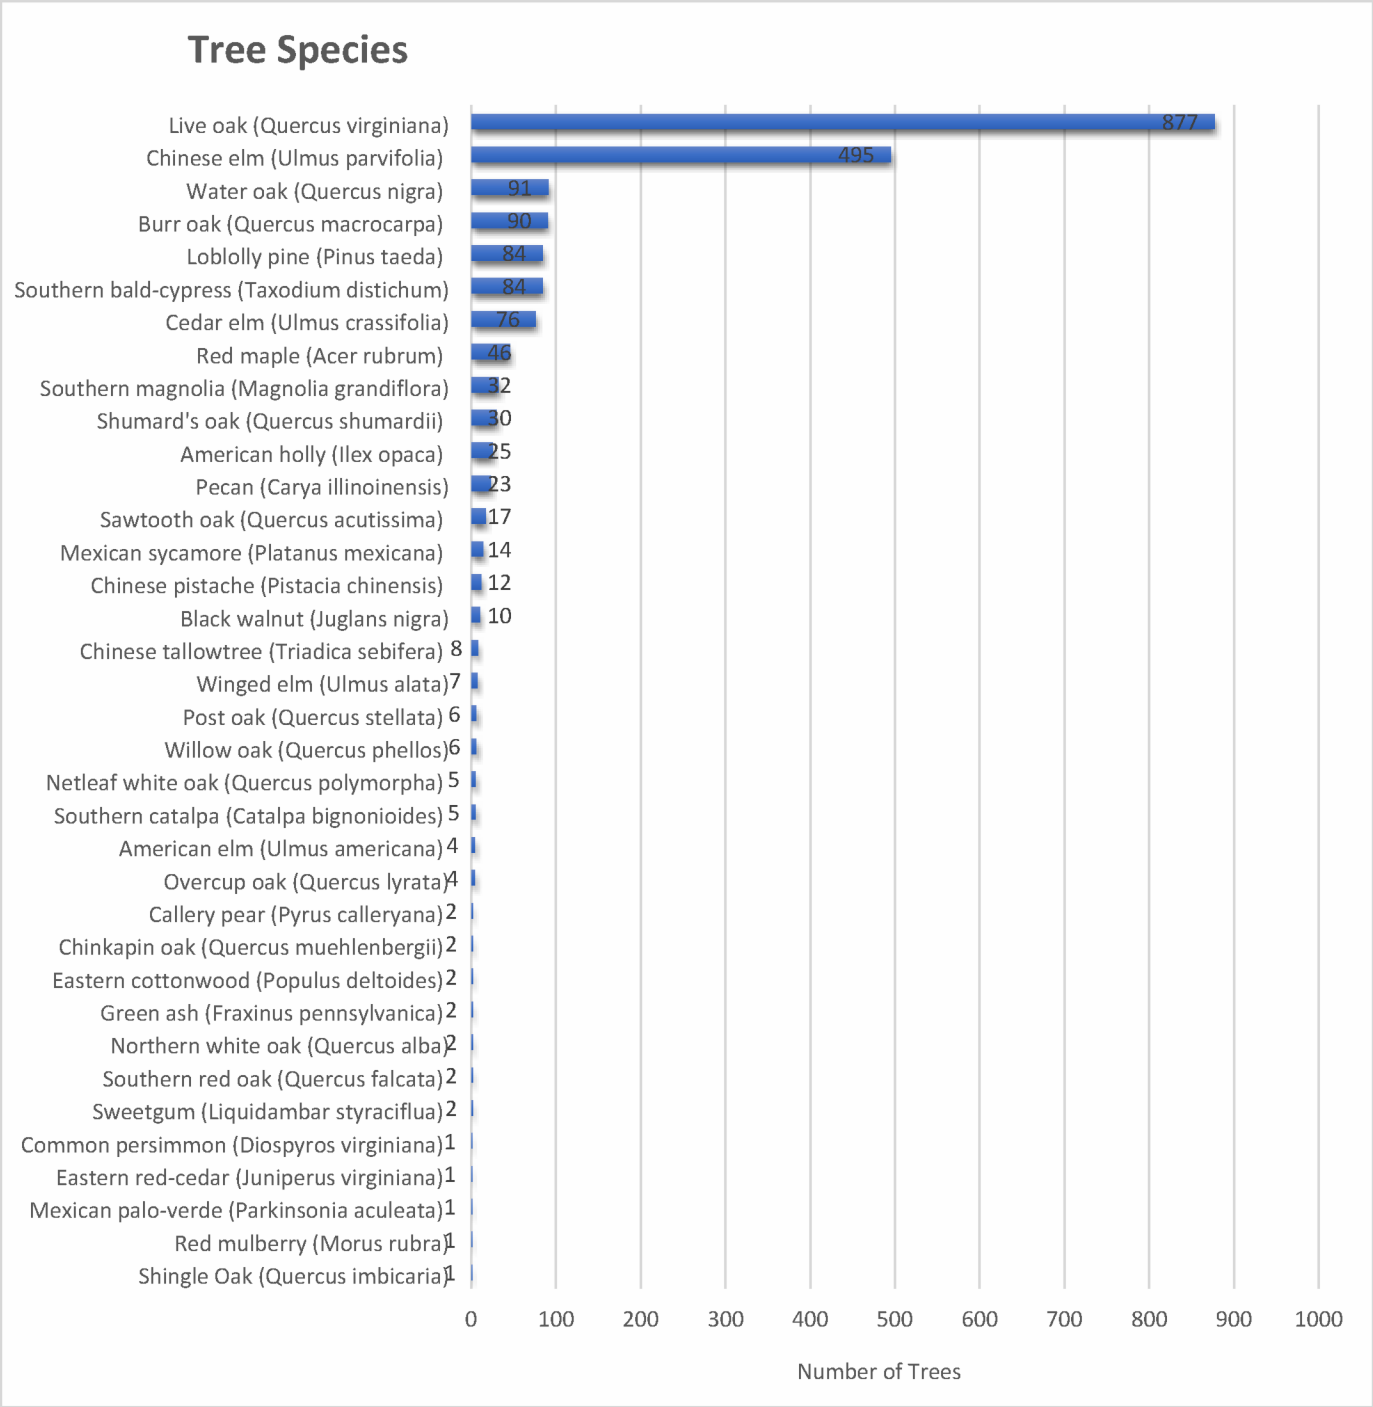
2 Methodology

The study area is defined as a ½-mile buffer surrounding the proposed alignment and stations for the Project.

A review of the study area was conducted using United States Fish and Wildlife Service (USFWS) Information for Planning and Consideration (IPaC), a planning tool that helps determine potential threatened and endangered species presence within a project area. IPaC also provides information on designated critical habitats, National Wildlife Refuges, and wetland resources in or near a project area. The Texas Parks and Wildlife Division's (TPWD) National Diversity Database (TXNDD) was used for analysis of potential impacts to threatened and endangered species.

Geographic Information Systems (GIS) shapefiles were obtained from the TPWD Ecological Mapping Systems of Texas (EMST); and the Texas Commission on Environmental Quality's (TCEQ's) *Ecoregions of Texas* (2007). This assessment was built upon detailed field investigations conducted by project biologists in 2022 to verify vegetative communities, wildlife habitat, migratory bird use, and potential habitat for rare threatened and endangered species within the study area.

A tree survey was conducted by qualified biologists in May through July 2022. Trimble R2 and EOS Arrow Global Positioning (GPS) units with sub-meter accuracy were utilized to determine the boundaries of the survey and record the location of trees within the boundary. Trees identified on the COH Street Tree List within the survey boundary that exhibited Diameter at Breast Height (DBH) values equal to or greater than 1.5 inches were analyzed and recorded. Any tree species not identified on the COH Street Tree List that exhibited Diameter at Breast Height (DBH) values greater than 20 inches were also analyzed. Trees' conditions were assessed based on overall form, signs of stress, wounds, decay, damage, and diseases. Based on those factors, trees were given condition classifications as poor, fair, good, and excellent. See **Figure 3-1** for Tree Species within the University study area.



3 Existing Conditions

The study area is within the Texas Gulf Coast Prairies and Marshes ecoregion. This region is characterized by low elevation and low relief that is slowly drained. It is dissected by streams and rivers flowing into the Gulf of Mexico. The region includes salt grass marshes, tallgrass prairies, tall woodlands, among others.

3.1 Vegetation/Habitat

METRO determined that the majority of vegetation within the current ROW consists of typical maintained grasses, and landscaped assemblages of trees and shrubs. Therefore, the majority of the existing ROW fits the description of the "Urban Low Intensity" and "Urban High Intensity" EMST) vegetation type. TPWD defines Urban High Intensity as built-up areas with wide transportation corridors, which is predominately covered by impervious cover. Urban Low Intensity is defined as built-up areas, but not entirely covered by impervious surfaces, it includes most of the non-industrial areas within cities and towns (TPWD, 2014, 2022a).

Figure 3-1: Tree Species within the Study Area

Source: Holloway Environmental Tree Inventory Report, 2022

METRO mapped 20 EMST habitat types within the study area. A review of the TPWD EMST revealed that 96 percent of the study area is considered Urban, with 59 percent of the study area defined as Urban High Intensity and 37 percent Urban Low Intensity.

The remaining 4 percent consists mostly of coastal prairie, deciduous woodland, barren, grass farm, disturbed or tame grassland, and other smaller habitats. Coastal prairie habitat makes up approximately 1 percent of the study area. It consists of species such as Bermudagrass (*Cynodon dactylon*), bahia grass (*Paspalum notatum*), deep-rooted sedge (*Cyperus entrerianus*), broom sedge (*Andropogon virginicus*), little bluestem (*Schizachyrium scoparium*) and others. The following habitats are less than 1 percent of the total study area:

- Barren
- Grass Farm
- Gulf Coast: Coastal Prairie Pondshore
- Marsh
- Native Invasive: Deciduous Shrubland
- Native Invasive: Deciduous Woodland
- Native Invasive: Huisache Woodland or Shrubland
- Native Invasive: Juniper Woodland
- Open Water
- Pine Plantation greater than 3 meters tall
- Pineywoods: Disturbance or Tame Grassland
- Pineywoods: Hardwood Flatwoods
- Pineywoods: Longleaf or Loblolly Pine Flatwoods or Plantation
- Pineywoods: Wet Hardwood Flatwoods
- Post Oak Savanna: Live Oak Motte and Woodland

See **Table 3-1** for EMST Vegetation Types within the study area.

3.2 Threatened and Endangered Species

The majority of the study area consists of typical maintained roadside grasses, which appear to be mowed regularly, and landscape assemblages of trees and shrubs along the roadway medians.

3.2.1 Federally Listed Threatened and Endangered Species

IPaC data shows that there are five federally listed threatened and endangered species that have the potential to occur within the study area:

- West Indian Manatee (*Trichechus manatus*)
- Eastern Black Rail (*Laterallus jamaicensis*)
- Piping Plover (*Charadrius melodus*)
- Red Knot (*Calidris canutus rufa*)
- Texas Prairie Dawn-flower (*Hymenoxys texana*)

The West Indian Manatee (*Trichechus manatus*) occurs in marine habitats. While habitat for the West Indian Manatee exists within Texas, there is no designated critical habitat nor suitable habitat for the West Indian Manatee within the University study area.

Table 3-1 EMST Vegetation Types by Acres

Vegetation	Area				
	Segment 1	Segment 2	Segment 3	Segment 4	Segment 5
Barren	85.67	6.94	8.40	25.92	105.96
Grass Farm	136.76	1.93	16.88	11.96	9.07

Urban High Intensity	6,699.56	6,057.60	4,714.78	7,662.54	3,831.34
Urban Low Intensity	4,116.66	2,250.22	3,585.09	1,607.89	6,299.27
TOTAL	**11,347.13**	**8,363.45**	**8,360.42**	**9,702.27**	**10,877.26**

Source: Texas Parks and Wildlife (TPWD) 2022. Ecological Mapping Systems of Texas.

The Eastern Black Rail (*Laterallus jamaicensis*) prefers woodland forests, riparian, and developed urban areas. While the Eastern Black Rail has potential suitable habitat within the study area, it has not been observed within the study area (ebird, 2022) and there are no designated critical habitats. Although the Eastern Black Rail has not been observed, preferred habitat is located within the study area. The Red Knot (*Calidris canutus rufa*) and Piping Plover (*Charadrius melodus*) prefer muddy tidal flats and beach shorelines. The Red Knot and Piping Plover have not been observed within the study area (ebird, 2022) and only need to be considered for wind-related projects. No suitable habitat for these species occurs within the study area.

The Texas Prairie Dawn-flower (*Hymenoxys texana*) prefers naturally barren or sparsely vegetated slick spots or pimple mounds on coastal prairies. A desktop review of vegetation types and aerial imagery shows that the study area is predominantly urbanized, with less than 2 percent of vegetation being coastal prairie. The Texas Prairie Dawn-flower has not been observed within the study area, but Segments 1 and 5 may contain limited suitable habitat for the species.

3.2.2 Candidate Species

According to the IPaC, the Monarch Butterfly (*Danaus plexippus*) is listed as a candidate species, but is not yet listed as threatened or endangered or proposed for listing. Monarch butterflies prefer open fields and meadows with milkweed. Suitable habitat is unlikely to occur within the study area, as it is predominantly urbanized, and minimal habitat supports open fields and meadows.

3.2.3 State-Listed Species

Three state-listed species - the Eastern Black Rail (*Laterallus jamaicensis*), Texas Prairie Dawn-flower (*Hymenoxys texana*), and Houston Toad (*Anaxyrus houstonensis)* - were identified that may occur within the study area. Both the Eastern Black Rail and Texas Prairie Dawn-flower are listed federally and by the state. **Table 3-** and **Table 3-** list the species that could occur in the study area, as well as suitable habitat information for each. No designated critical habitat for these species occurs within the study area.

3.2.4 Species of Greatest Conservation Need

TPWD designates native plants or animals as a Species of Greatest Conservation Need (SGCN) as part of the *Texas Conservation Action Plan* (TPWD, 2012). These species are declining or rare and need attention if they are to recover and avoid being listed as threatened or endangered under state regulations. The TxNDD shows that two SGCNs, the Oklahoma Grass, Pink (*Calopogon oklahomesis*) and the Southern Crawfish Frog (*Lithobates Areolatus Areolatus*), have been observed in and around the study area. There is potentially suitable habitat within the study area for both species. A summary of these species is included in **Table 3-2** and **Table 3-3** and the area's these species may occur are seen in **Figure 3-2** and **Figure 3-3**.

Table 3-2: Likelihood of Occurrence for Threatened, Endangered, and Candidate Species within the Study Area.

Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
Amphibians						
Houston Toad	*Anaxyrus (Bufo) houstonensis*	*E*	*E*	The species inhabits areas with deep, friable, sandy soils that contain varying degrees of overstory vegetation.	No	The Houston toad has been extirpated from Harris County.
Mollusks						
Louisiana Pigtoe	*Pleurobema riddellii*		*T*	Freshwater mussel currently found in the Sabine, Neches and Trinity River basins in Texas. This species occurs in streams to medium-sized rivers with moderate flow. In Texas, the species has only been documented occurring in relatively shallow lotic waters with preferable substrate being sand and sand with gravel and silt. It is not generally known to tolerate impoundments.	No	No suitable habitat was observed in the waterways in the study area.
Sandbank Pocketbook	*Lampsillis satura*		*T*	A freshwater mussel that is currently limited to the upper Trinity, Neches, Sabine, and San Jacinto River basins in Texas. The species occurs in flowing small to large rivers with gravel, gravel-sand, and sand substrates. It has been observed in littoral areas with snags, gravel, or sand substrate with slow to moderate currents, as well as lotic waters in substrates of sand, silty sand, and sand and clay mixture.	No	No suitable habitat was observed in the waterways in the study area.
Insects						
Monarch Butterfly	*Danaus plexippus*	*C*		Found statewide. Adults are found in a variety of habitats including native prairies, pastures, open woodlands and savannas, desert scrub, roadsides and other habitats with abundant nectar plants, including urbanized areas. Although adults may be present year round, they are primarily encountered between March and November, and are most commonly observed in the summer and fall during breeding and migration. Caterpillars are found on various species of the family Asclepiadaceae. Common host plants include milkweeds (*Asciepias spp.*), milkweed vines (*Matelea spp.*), climbing milkweed (*Funastrum spp.*), swalloworts (*Cynanchum spp.*) and Anglepod	Yes	Monarchs are frequent in the area during migration. Monarch BMPs would be followed during construction.

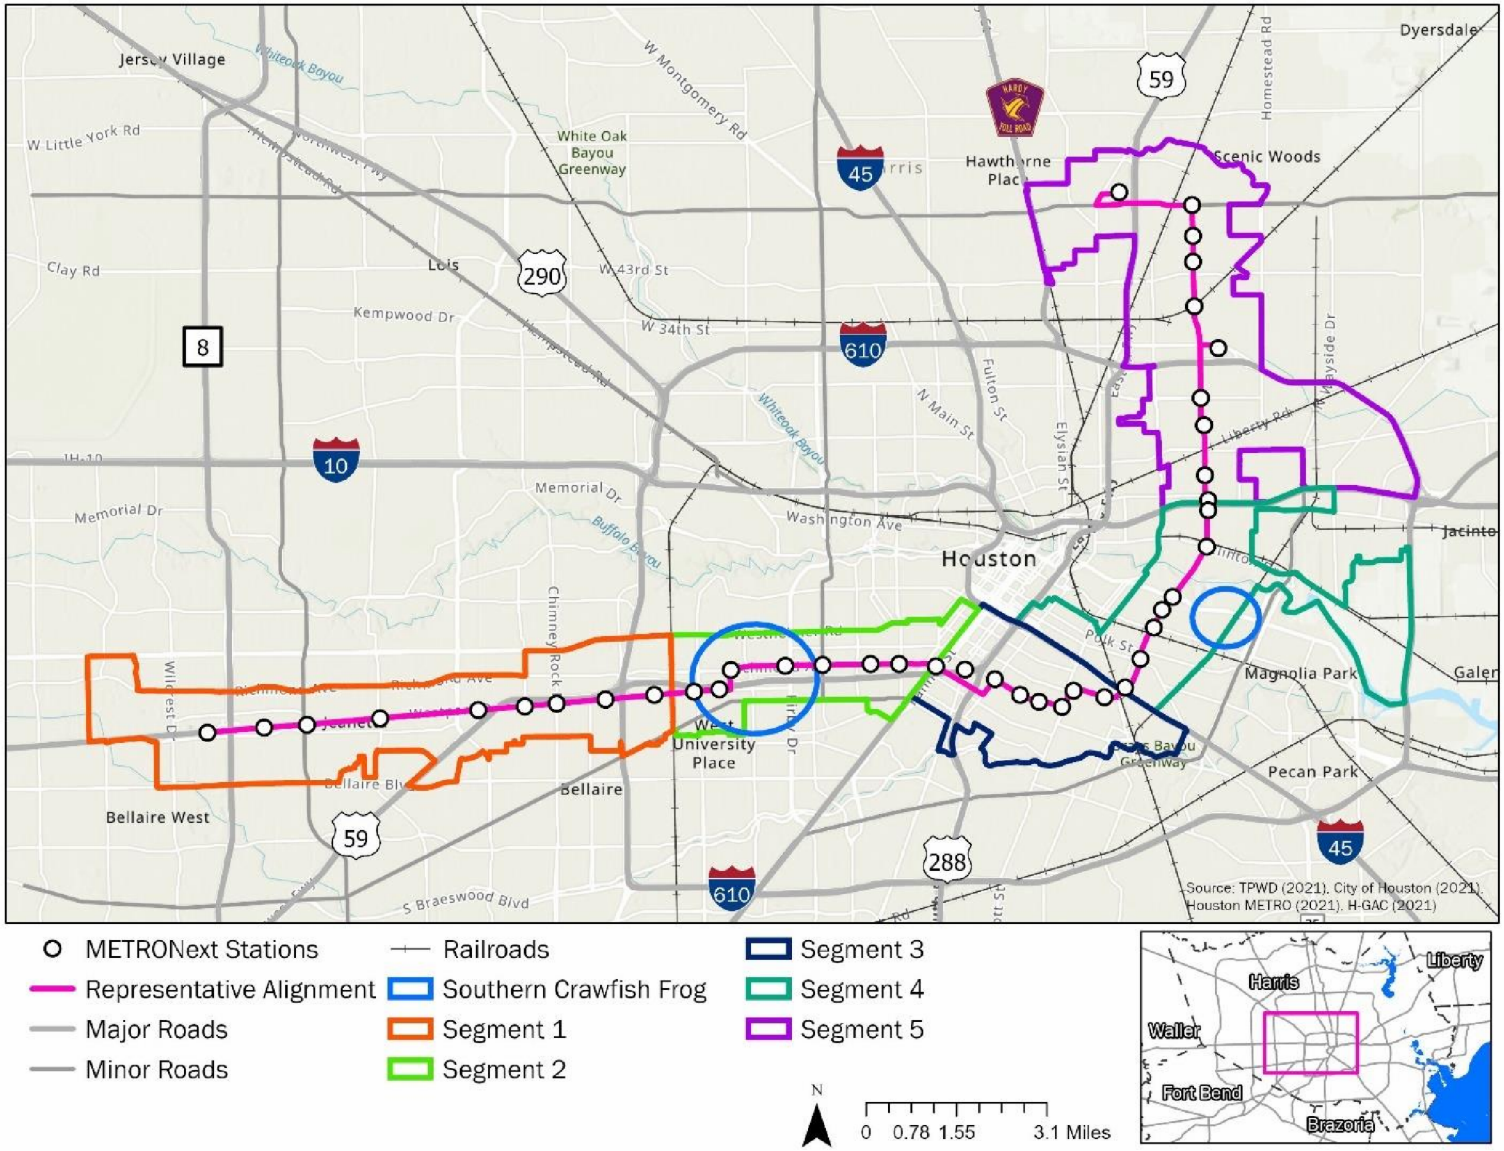
Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
				(*Gonolobus suberousus*). Caterpillars are most frequently observed between April and September.		
Birds						
Black Rail	*Laterallus jamaicensis*	*T*	*T*	Black rails are year-round residents of the central and upper coast and migrants in the eastern part of the state. The species nests in salt, brackish, and freshwater marshes, pond borders, wet meadows and wetlands with hydrophytic grass species. Water depth is an important part and key habitat component, as the species typically is found where water is less than two to four centimeters deep. Other significant habitat factors may include vegetation density, distance to open water, and water regime stability. Nesting typically occurs in the highest sections of the marsh, which have mesic to hydric soils and are flooded by only the highest tides. Nests are built in areas with saturated or shallowly flooded soils and dense vegetation on damp ground on mat of previous year's dead grasses, or over shallow water. In salt or brackish marshes, typical habitat includes dense stands of cordgrasses (*Spartina sp.*). spikegrasses (*Distichlis sp.*) and needlerush (*Juncus sp.*). or, in more upland saltbush communities along marsh edge. Typical freshwater habitat includes species such as cattail (Typha) and bulrush (*Scirpus sp.*). Non-breeding habitat is thought to be similar to breeding habitat.	Yes	The occurrence of the Black Rail might occur within the study area during migration and foraging; however, any use would be temporary, and no impacts are expected to occur. Bird BMP's would be put into place during construction.
Reddish Egret	*Egretta rufescens*		*T*	A year-round resident of the Texas Gulf Coast, the species inhabits saline, hypersaline, or brackish coastal habitats include barren sand or mud tidal flats, salt ponds, lagoons, and open mangrove communities. It occurs less frequently in other habitats such as coastal beaches, sparsely-vegetation freshwater marshes, and the sores of lakes and reservoirs. It nests on the ground or low in mangroves or other terrestrial vegetation (i.e., mesquite [*Prosopis glandulosa*], yucca [*Yucca sp.*] or prickly pear [*Opuntia sp.*]) on natural islands or man-made dredge spoil islands, but it also occasionally nests on the coastal mainland. It forages in shallow water usually less than 15 centimeters deep.	No	No suitable habitat was found in the study area for the Reddish Egret.

Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
Swallow-tailed Kite	*Elanoides forficatus*		*T*	This migratory species breeds in the South Central Plains of east Texas and throughout the southeastern United States (U.S.) In Texas, breeding habitat occurs between sea level and 230 meters in elevation in bottomland forests, cypress swamps, pine glades, and freshwater marshes skirting large lakes. It nests near the tops of trees that are higher than the surrounding stand, often near a clearing or the edge of a forest or woodland. It prefers to nest in pines, but occasionally uses species such as bald cypress (*Taxodium distichum*), water oak (*Quercus nigra*) or cottonwood (*Populus deltoides*).	Yes	The occurrence of the Swallow-tailed Kite might occur within the study area during migration and hunting; however, any use would be temporary, and no impacts are expected to occur. Bird and vegetation BMPs would be put into place during construction.
White-tailed Hawk	*Buteo albicausatus*		*T*	This year-round resident species occurs throughout the Western Gulf Coastal Plain ecoregion of Texas and less frequently farther inland in the East Central Texas Plains and South Texas Plains regions. Near the coast, preferred habitat includes prairies, cordgrass flats, and live oak scrub. Further inland in inhabits prairies, mesquite and oak savannas, and mixed savanna-chaparral. Breeding occurs within open savannas with short trees and shrubs, such a mesquite (*Prosopis giandulosa*), hackberry (*Celtis laevigata*), and oak (*Quercus sp.*). with an average height of 12 feet and canopy diameter of 18 feet. Suitable coastal prairie habitat is similar to desirable range condition for cattle grazing.	Yes	The occurrence of the White-tailed hawk might occur within the study area during migration and hunting; however, any use would be temporary, and no impacts are expected to occur. Bird and vegetation BMPs would be put into place during construction.
Whooping Crane	*Grus americana*	*E*	*E*	The species breeds in Canada and winters on the Texas coast at Aransas National Wildlife Refuge. During migration it typically stops to ret and feed in open bottomlands of large rivers and marshes but, like other waterbirds, it may also utilize flooded croplands, playas, large wetlands associated with lakes, small ponds, and various other aquatic features. Typical migration habitat includes sites with good horizontal visibility, water depth of 30 centimeters or less, and minimum wetland size of 0.04 hectare for roosting.	No	No suitable habitat was found for the Whooping Crane in the study area.
Wood Stork	*Mycteria americana*		*T*	The species breeds in Mexico, and nesting sites have not been recording in Texas since 1960. However post-breeding migrants disperse into Texas in the summer. Foraging habitat includes freshwater prairie ponds, flooded pastures or fields, ditches, and other	No	No suitable habitat was found for the wood stork in the study area.

Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
				shallow standing water with an open canopy, occasionally including brackish wetlands. The species typically roosts communally in tall snags, sometimes in association with other wading birds (i.e., active heronries).		
Mammals						
Louisiana Black Bear	*Ursus americanus luteolus*		*T*	Historically, Louisiana black bear occurred in east Texas throughout the Western Gulf Coastal Plans ecoregion and as far west as the San Antonio River drainage basin. Habitat includes bottomland hardwood forests, brackish and freshwater marshes, salt domes, wooded spoil levees along canals, bayous, and agricultural fields. It generally requires areas with large tracts of inaccessible forest.	No	No suitable habitat was found for the Louisiana Black Bear within the study area.
Rafinesque's Big-eared Bat	*Corynorhinus rafinesquill*		*T*	This species occurs in bottomland pine and hardwood forests of east Texas. This species is known to roost in hollow trunks of bottomland hardwoods such as black gum (*Nyssa Sylvatica*), southern magnolia (*Magnolia grandiflora*), and water tupelo (*Nyssa aquatica*). It also roosts in caves, and man-made structures such as bridges, culverts, and abandoned buildings.	No	While black gum and southern magnolia trees are located within the study area, no bottomland pine nor hardwood forests are present in the study area.
West Indian Manatee	*Trichechus manatus*	*T*	*T*	The West Indian Manatee is found throughout the Gulf of Mexico, Caribbean Sea, and Western Atlantic Ocean. The species utilized marine, brackish, and freshwater systems in subtropical and tropical coastal areas throughout its range. Preferred habitat is near shore features with sea grass and eel grass beds and access to deep water channels. In the U.S., the species is rarely documented off the Louisiana and Texas Gulf Coast during warm winter months, however, the winter range, due to low tolerances for cold water, is restricted to the southern Florida peninsula. Manatees are often attracted to accessible areas where industrial plants discharge large volumes of heated wastewater. During the summer, their range expands along the Atlantic Coast and Gulf Coast, traveling by shoreline and along channels.	No	In rare occurrences, Manatees have been found traveling along bayous in the Houston area, however, it is unlikely for this event to occur within the study area.
Reptiles						

Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
Alligator Snapping Turtle	*Macrochelys temminckii*	*PT*	*T*	Occurs in East Texas where it inhabits perennial water bodies such as the deep water of rivers, canals, lakes, and oxbows, along with swamps, bayous, and ponds near deep running water. Preferred habitat is usually in water with a mud bottom and abundant aquatic vegetation, but the species may use sand-bottomed creeks.	Yes	Potential habitat is present within the bayous in the study area. No work is currently proposed within the bayous, therefore no impact is expected to occur. Reptile BMPs will be put into place during construction to project habitat within the bayous.
Texas Horned Lizard	*Phrynosoma cornutum*		*T*	The species is found in semi-arid open areas with scattered vegetation comprised of bunchgrass, cacti, yucca, mesquite, acacia, juniper, or other woody shrubs and small trees commonly found in loose sandy or loamy soils.	No	No suitable habitat is present within the study area.
Plants						
Houston Daisy	*Rayjacksonia aurea*		*T*	The species is endemic to the Gulf Coastal Plain of Texas. The plant occurs on and around naturally barren or sparsely vegetated saline slick spots or pimple mounds on coastal prairies, usually on sandy to sandy loam soils, occasionally in pastures and on roadsides in	No	No suitable habitat was found for the Houston Daisy during the field visit.
Texas Prairie Dawn-Flower	*Hymenoxys texana*	*E*	*E*	This annual herb is endemic to the upper Texas Gulf Coastal Plain. It occurs in grasslands with sparsely vegetated areas (slick spots) at the base of pimple mounds in association with poorly drained saline soils that are sticky when wet and powdery when dry.	No	No suitable habitat for the Texas Prairie Dawn was found during the field visit.
Fishes						

Common Name	Scientific Name	Listing Status		Habitat Description	Suitable Habitat Within Study Area?	Determination
		USFWS	TPWD			
Western Creek Chubsucker	*Erimyzon claviformis*		*T*	The species is widespread in east Texas from the Red to the San Jacinto Rivers. The species occurs in pools of clear headwaters, creeks, and small rivers with silt, sand, and gravel substrates, and occasionally in lakes. It is frequently found near submergent vegetation. Spawning occurs in river mouths or pools, riffles, lake outlets, or upstream creeks.	No	No suitable habitat was found during the field visit for the Western Creek Chubsucker. Any work done near or around bridges would have water best management practices put into place.



Notes: T – Threatened; E – Endangered, C- Candidate
Sources: TPWD 2020, 2021a, USFWS 2021

Table 3-3: Species of Greatest Conservation Need in the Study Area

Common Name	Scientific Name	Distance from Study Area (miles)	Habitat Description	Potentially suitable habitat within Study Area
Oklahoma Grass Pink	*Calopogon oklahomesis*	*0.0*	Mesic, acidic, sandy to loamy prairies, pine savannas, oak woodlands, edges of bogs, and frequently mowed meadows, flowers from March to July.	No suitable habitat was found for Oklahoma Grass Pink in the study area.
Southern Crawfish Frog	*Lithobates Areolatus*	*0.0*	Terrestrial and aquatic: The terrestrial habitat is primarily grassland and can vary from pasture to intact prairie; it can also include small prairies in the middle of large, forested areas. Aquatic habitat is any body of water, but preferred habitat is ephemeral wetlands.	No ephemeral wetlands are present within the study area, and no habitat was observed during the field visit.

Figure 3-3: Flora TXNDD Species within the Study Area

Source: TPWD TXNDD 2022 *Circles represent TXNDD data species range.

The Project may affect the monarch butterfly; however, the monarch is currently a candidate species and no consultation with USFWS is required at this time. As construction activities for this Project are not anticipated to be completed prior to Fiscal Year 2024, when a listing decision for the species is anticipated, additional coordination may be required. The Project should be reevaluated at that time to determine if further action is required if the species becomes proposed for federal listing.

3.3 Protected Trees

A total of 2,070 trees were recorded during the survey and consisted of 36 different species, the most recorded species was Live Oak (*Quercus virginiana*). See **Figure 3-1** for the trees within the study area.

4 Environmental Commitments

4.1 Short-Term Construction Impacts

Potential short-term impacts would occur as the Project is constructed. Potential short-term impacts to federally and state-listed species and SGCNs could be attributed to mobile species interacting with or avoiding construction machinery and vehicles.

The Eastern Black Rail, the White-Tailed Hawk, and the Swallow-Tailed Hawk have not been observed within the study area., There is potential foraging and hunting habitat located within the study area; however, any use would be temporary and there is no suitable breeding habitat, therefore no effects are expected to occur to these species. Other common bird species may be directly affected by displacement due to habitat conversion within the proposed ROW. Birds may also experience harassment effects (in the form of disturbance of normal behavior or activities) as a result of construction; these effects would be temporary, occurring only during the duration of construction. Because of their mobility, direct mortality of bird species from the Project construction activity is unlikely to occur. However, the loss of nesting, foraging, and cover habitats could impact the fecundity and survival of bird species. Birds occupying the proposed ROW would be pushed into adjacent habitats where they would be forced to compete with existing populations for food and cover resources.

Mammal or reptile species may be directly affected by displacement due to habitat conversion within the proposed ROW. Animals in the study area may also experience harassment effects (in the form of disturbance of normal behavior or activities) as a result of construction. These effects would be temporary, occurring only during the duration of construction. Because of the mobility of most mammals, direct mortality from the Project construction activity is unlikely to occur. Fossorial species, which live primarily underground, such as armadillos and rabbits would be susceptible to mortality due to ROW and earth-moving construction activities. The loss of nesting, foraging, and cover habitats could impact the fecundity and survival of the mammal species. Individuals occupying the proposed ROW would be pushed into adjacent habitats where they would be forced to compete with existing populations for food and cover resources. Mammal species with relatively large home ranges or species that migrate between habitats would be impacted by the fragmentation of migration corridors and the increased risk of wildlife/vehicle collisions.

4.2 Long-Term Operational Impacts

Long-term impacts to federally and state-listed species and SGCNs could include the loss of wildlife habitat, habitat fragmentation, and the direct removal/disturbance of plant populations. Long-term impacts on wildlife species could include wildlife/vehicle collisions that might occur, following the construction of the Project.

Permanent impacts to vegetation would include vegetation removal, ground clearing, placement of fill material, and construction of culverts and bridges. Trees considered protected by the COH would not be removed during any clearing activities. The Project is being designed to avoid removing or impacting protected trees where feasible and as the design progresses, each tree will be evaluated to determine the potential for avoidance. The tree survey conducted in 2022 no longer reflects current design and a new survey would be completed once project design is at the 60 percent level.

5 Mitigation Measures

METRO would implement the following Best Management Practices (BMPs) during construction in order to avoid, minimize, and mitigate potential impacts to the species within the study area.

Bird Species:

Depending on the migration patterns of various species, the potential may exist for breeding colonies of migratory birds to be present during construction activities. However, due to past landscape alterations that removed most trees and native ground cover, most vegetative cover within the ROW consists of maintained grasses, so Project-related vegetation-clearing activities would be minimal. It is not anticipated that migratory birds would be impacted as a result of the construction of the Project due to the lack of remaining reproductive and foraging habitat. METRO will take all appropriate actions to prevent the take of migratory birds, their active nests, eggs, or young by the use of proper phasing of the Project or other appropriate actions. Migratory Bird Treaty Act (MBTA) appropriate commitments would be included in the Project file, which would include:

- No active migratory bird nests (nests containing eggs and/or young) will be removed or destroyed at any time of the year.
- No colonial nests (swallows, for example) on or in structures will be removed until all nests in the colony become inactive.
- Measures, to the extent practicable, will be used to prevent or discourage migratory birds from building nests within portions of the Project area planned for construction.
- Inactive nests will be removed from the Project area to minimize the potential for reuse by migratory birds.
- Construction or demolition activities will be scheduled outside the typical nesting season (February 15 to October 1) and will comply with the previously listed prohibitive provisions of the MBTA, which apply year-round.

Vegetation:

METRO would implement the following BMPs in order to avoid, minimize, and mitigate potential impacts to habitat within the study area.

- The amount of vegetation cleared would be minimized. Removal of native vegetation, particularly mature native trees and shrubs would be avoided to the greatest extent practicable. Wherever practicable, impacted vegetation would be replaced with in-kind on-site replacement/restoration of native vegetation;
- To minimize potential effects, activities would be planned to preserve mature trees and COH protected and heritage trees, particularly acorn, nut, or berry-producing varieties. These types of vegetation have high value to wildlife;
- Replacement trees would be of equal or better wildlife quality than those removed and be regionally adapted native species;
- When trees are planted, a maintenance plan, including seasonal root trimming, that ensures at least an 85 percent survival rate after three years would be developed;
- The use of locally adapted native species would be used in landscaping and seed mixes;
- Avoidance of vegetation clearing activities during the general bird nesting season, March through August, to minimize adverse impacts to birds; and
- The COH's Tree Ordinance would be adhered to for tree removal. METRO would make all feasible efforts to avoid impacts to protected and heritage trees.

Aquatic Amphibians and Reptiles:

- Minimize impacts to wetlands, temporary and permanent open water features, including depressions, and riverine habitats.
- Maintain the existing hydrologic regime and any connections between wetlands and other aquatic features.
- Use barrier fencing to direct animal movements away from construction activities and areas of potential wildlife-vehicle collisions in construction areas directly adjacent, or that may directly impact, potential habitat for the target species.
- Apply hydro mulching and/or hydroseeding in areas for soil stabilization and/or revegetation of disturbed areas around wetlands and in riparian areas. If erosion control blankets or mats will be used, the product should not contain netting, but should only contain loosely woven natural fiber netting in which the mesh design allows the threads to move, therefore allowing expansion of the mesh openings. Plastic netting should be avoided.
- Project specific locations (PSLs) proposed within state-owned ROW should be located in uplands away from aquatic features.

- When work is directly adjacent to the water, minimize impacts to shoreline basking sites (e.g., downed trees, sand bars, exposed bedrock) and refugia/overwinter sites (e.g., brush and debris piles, crayfish burrows, aquatic logjams, and leaf packs).
- If gutters and curbs are part of the roadway design, install gutters that do not include the side box inlet and include sloped (i.e., mountable) curbs to allow small animals to leave the roadway. If this modification to the entire curb system is not possible, install sections of sloped curb on either side of the stormwater drain for several feet to allow small animals to leave the roadway. Priority areas for these design recommendations are those with nearby wetlands or other aquatic features.

Street Tree List

Street Tree List

Scientific Name	Common Name	Height	Spread	Growth Rate	Comments
Large Trees					
Acer barbatum	Texas sugar maple	Large	30	Medium	Fall color
Acer rubrum	Red maple	Large	30	Medium	Fall color
Carya illinoensis	Pecan	Large	50	Slow	Fruit
Carya texana	Black hickory	Large	20	Slow	Fall color
Fraxinus americana	White ash	Large	40	Fast	Fall color
Ginko biloba	Ginko	Large	40	Slow	Fall color/male only
Juglans nigra	Black walnut	Large	40	Slow	Fall color
Liquidambar stryaciflua	Sweetgum	Large	40	Fast	Fall color
Magnolia grandiflora	Southern magnolia	Large	45	Slow	Evergreen
Nyssa sylvatica	Black gum	Large	30	Medium	Fall color
Pinus taeda	Loblolly pine	Large	30	Fast	Evergreen
Platanus mexicana	Mexican sycamore	Large	50	Fast	Unique leaf
Quercus acutissima	Sawtooth oak	Large	40	Fast	Drought tolerant
Quercus alba	White oak	Large	50	Slow	Sandy soils
Quercus falcata	Southern red oak	Large	40	Slow	Fall color
Quercus laurifolia	Laurel oak	Large	40	Slow	Semi-evergreen
Quercus lyrata	Overcup oak	Large	40	Slow	Large acorn
Quercus macrocarpa	Bur oak	Large	50	Slow	Large acorn
Quercus michauxii	Swamp chestnut oak	Large	40	Slow	Fall color
Quercus muehlenbergii	Chinkapin oak	Large	40	Slow	Fall color
Quercus nigra	Water oak	Large	40	Medium	Decidious
Quercus nutallii	Nuttall oak	Large	40	Medium	Fall color
Quercus phellos	Willow oak	Large	40	Medium	Decidious
Quercus polymorpha	Monterray oak	Large	40	Fast	Drought tolerant
Quercus rizophyllia	Loquat leaf oak	Large	40	Fast	Drought tolerant
Quercus shumardii	Shumard oak	Large	40	Slow	Fall color
Quercus stellata	Post oak	Large	40	Slow	Decidious
Quercus virginiana	Live oak	Large	50	Slow	Semi-evergreen
Taxodium distichum	Bald cypress	Large	30	Fast	Decidious
Taxodium mucronatum	Montezuma cypress	Large	40	Fast	Semi-evergreen
Ulmus alata	Winged elm	Large	30	Medium	Drought tolerant
Ulmus crassifolia	Cedar elm	Large	30	Medium	Drought tolerant
Ulmus parvifolia	Chinese elm	Large	30	Fast	Unique bark
Ulmus parvifolia var Drakii	Drake elm	Large	30	Fast	Unique bark
Ulmus parvifolia var Emer II	Allee elm	Large	30	Fast	Drought tolerant
Small Trees					
*Bumelia lanuginosa**	Wholly bucket	Small	30	Slow	Unique leaf
*Diospyros virginiana**	Texas persimmon	Small	20	Medium	Drought tolerant
*Ehretia anacua**	Anacua	Small	20	Slow	Unique leaf
*Fraxinus texensis**	Texas ash	Small	25	Fast	Decidious
*Ilex opaca**	American holly	Small	15	Slow	Evergreen
*Ilex x attenuata var East palatka**	East palatka holly	Small	15	Slow	Evergreen
*Ilex x attenuata var Savannah**	Savannah holly	Small	15	Slow	Evergreen
*Magnolia virginiana**	Sweetbay magnolia	Small	20	Slow	Evergreen
*Pistacia chinensis**	Chinese pistache	Small	25	Slow	Fall color
*Prunus serotina**	Black cherry	Small	20	Medium	Unique leaf
*Quercus cambii**	Camby oak	Small	20	Medium	Drought tolerant
*Tilia carolinana**	Basswood	Small	15	Slow	Large leaf

*Street trees recommended for use under power lines, also considered as small parking lot trees

WOTUS	Waters of the US

1 Introduction

The Federal Transit Administration (FTA) and Metropolitan Transit Authority of Harris County (METRO) are conducting the environmental review process for the METRORapid University Corridor Project (the "Project") in the City of Houston, Harris County, Texas, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project.

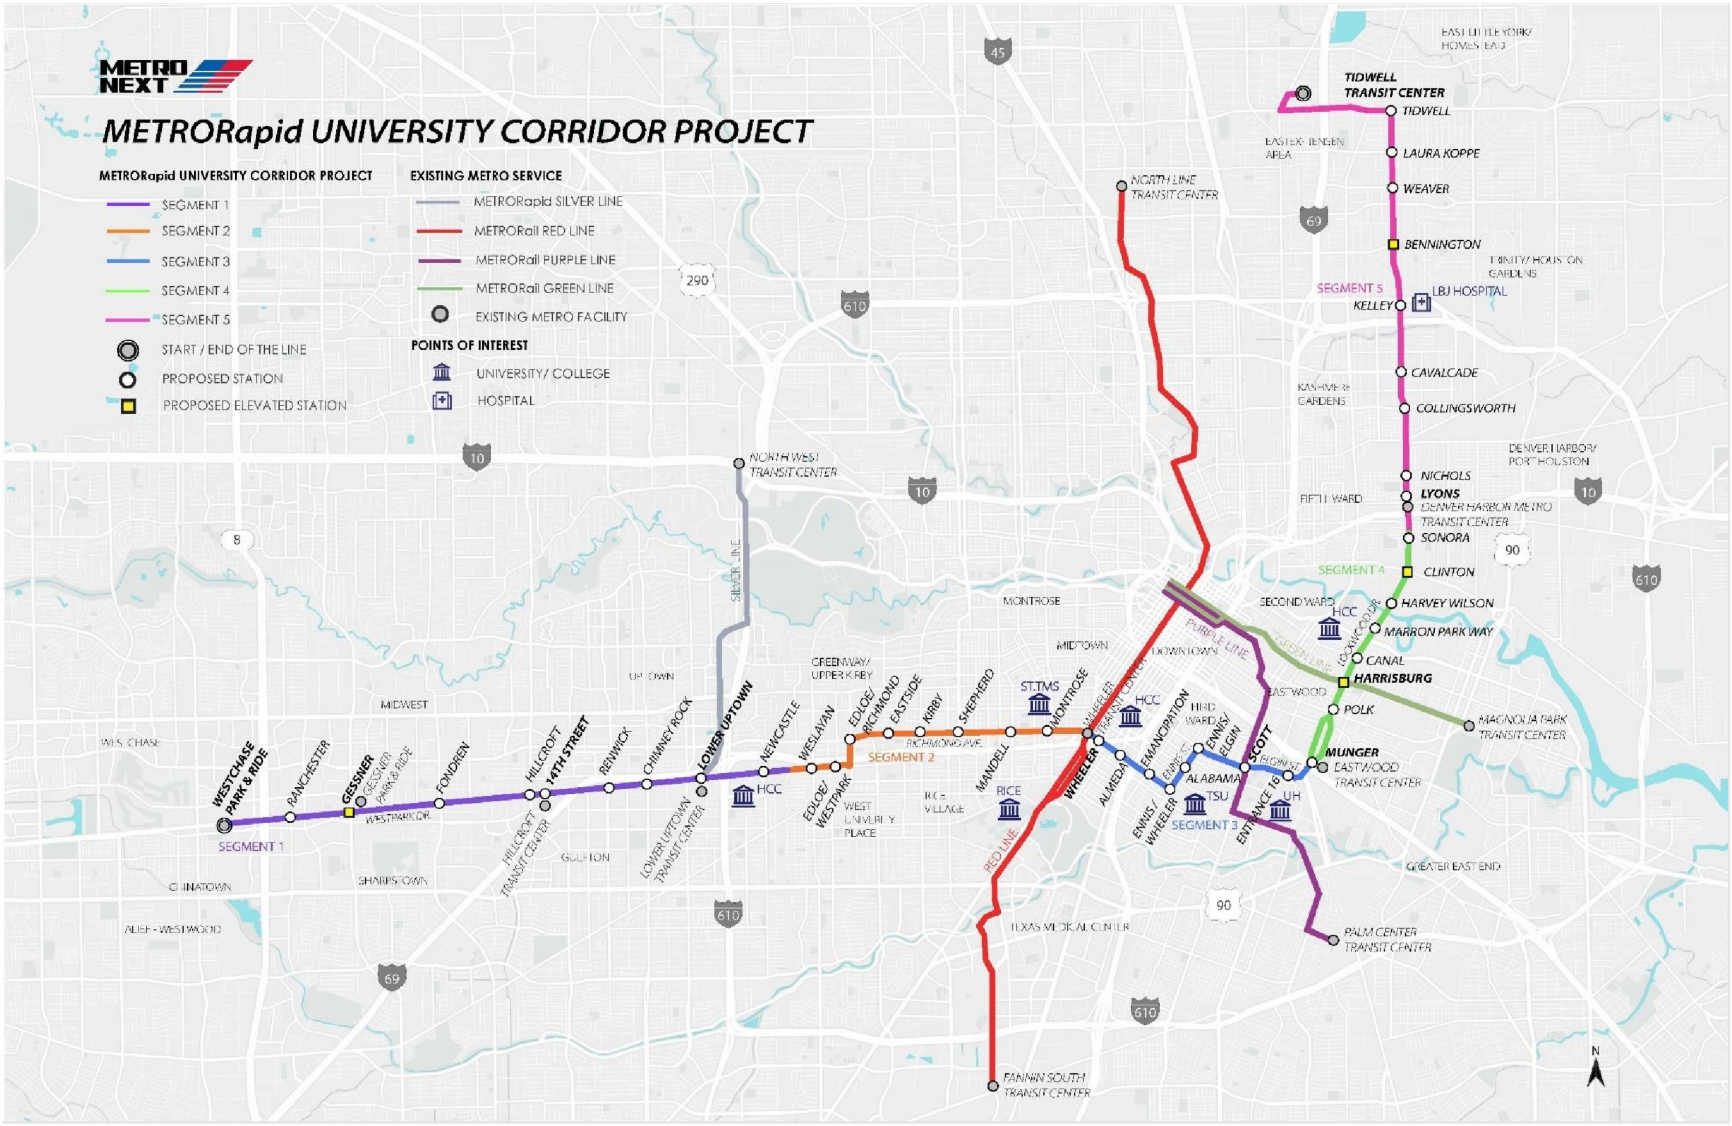
1.1 Purpose of Report

The purpose of this Water Resources Technical Report is to identify existing conditions and assess the potential effects of the No Build Alternative and Build Alternative on Waters of the United States (WOTUS), pursuant to the Clean Water Act (CWA). According to the CWA, WOTUS include intrastate rivers, streams, (including intermittent streams), floodplains, wetlands, natural ponds, and Traditionally Navigable Waters (TNW). The U.S. Army Corps of Engineers (USACE) regulates WOTUS. (EPA, 2021a).

1.2 Project Overview

The Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park and Ride in the west to the Tidwell Transit Center in the north. The Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas, with high proportions of minority, low-income, and transit-dependent populations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, creating a more equitable transportation system and supporting the development of a high-frequency, high-capacity transit network across Houston, the fourth-largest city in the United States.

The Project would operate in dedicated, METRO-owned right-of-way from Westchase Park and Ride to Interstate-610 (I-610) (West Loop), after which it would transition to the center of streets owned and maintained by the City of Houston. The Project would include signalization improvements at intersections to provide transit signal priority, improving travel times and reliability along the corridor. The Project is divided into five segments as shown in **Table 1-1.** **Figure 1-1** shows the proposed BRT alignment, existing LRT and BRT services to which it connects, and major activity centers along its path.



The Project would include 44 stations with accessible platforms, level boarding, next-bus arrival signs, security cameras, lighting, and offboard fare payment via ticket vending machines, electronic fare cards, or mobile devices. The Project would have the same fare structure as other services like METRORail, METRORapid, and local bus services. Two stations would be incorporated into existing METRO service like, Westchase Park and Ride and Tidwell Transit Center. Sidewalk improvements would provide pedestrian and Americans with Disabilities Act (ADA) access to the transit stations.

METRO plans to procure articulated battery-electric buses as part of the Project. Weekday service would be provided from 4:00 AM to 12:30 AM, with buses operating every 6 minutes from 6:30 AM to 7:00 PM, and every 12 minutes from 4:00 AM to 6:30 AM and 7:00 PM to 12:30 AM. Weekend service would be provided from 5:00 AM to 12:30 AM, with buses operating every 12 minutes all day on weekends.

Table 1-1: University Corridor Segments

Segment	From	To
1	Westchase Park & Ride	Westpark Dr 1,500 feet east of Union Pacific Railroad (UPRR) tracks, east of Newcastle Drive
2	Westpark Drive 1,500 feet east of UPRR tracks, east of Newcastle Drive	Richmond Avenue at US-59
3	Richmond Avenue at US-59	Elgin Street at I-45 (Eastwood Transit Center)
4	Elgin Street at I-45 (Eastwood Transit Center)	Lockwood Drive at Margarita Street
5	Lockwood Drive at Margarita Street	Tidwell Transit Center

Figure 1-1: University Corridor Proposed BRT Alignment

2 Methodology

The study area used for analysis includes the area within ½-mile on either side of the proposed alignment and stations for the University Corridor (see **Figure 1-1**). The analysis contained in this report is based on 30 percent design. METRO will work to further minimize impacts as the design progresses.

2.1 Surface Waters

METRO identified surface waters within the study area using USGS National Hydrography Database (NHD) maps via geographic information system (GIS) data and field observations. METRO assessed the potential effects that the Build Alternative would have on WOTUS by estimating potential water crossing impacts with the current available design.

METRO identified impaired waters in the study area using data from the Texas Commission on Environmental Quality (TCEQ) 303(d) List (TCEQ, 2014). **Section 5.0** describes proposed stormwater management techniques for Build Alternative.

2.2 Groundwater

METRO identified groundwater resources, water wells, recharge areas, and designated sole source aquifers in the study area using available information from the Texas Water Development Board (TWDB). METRO identified the potential effects of the Build Alternative on groundwater by reviewing current available design and groundwater locations.

Potential impacts to public water supply wells were assessed using data gathered from the TCEQ and TWDB databases to determine their locations in relation to Build Alternative and potential impacts to groundwater quality due to runoff (TWDB, 2021). **Section 5.0** describes the proposed erosion and sedimentation control measures in accordance with Section 401 of the CWA Best Management Practices (BMPs) for construction.

2.3 Wetlands

METRO identified WOTUS, including wetlands, through the National Wetlands Inventory (NWI) and other GIS data relative to soils, water resources, natural vegetation, etc. The NWI is a tool that includes all natural and man-made water features (e.g., streams/rivers/ponds) and is used along with field verification.

METRO recorded the boundaries of the WOTUS and verified the boundaries in the field in accordance with the *Field Guide for Wetland Delineation – 1987 Corps of Engineers Manual* (Environmental Laboratory, 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plain* (Version 2.0) (USACE, 2010).

2.4 Floodplains

METRO identified floodplains in the study area through the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) for Harris County. METRO identified and described the potential effects from the Build Alternative on floodplains utilizing the proposed 30 percent design. METRO mapped and evaluated changes to the base flood elevations, risks to human life and damage

to property based upon loss of flood storage, the potential to support future development, and impacts to beneficial floodplain values.

2.5 Rivers and Harbors Act of 1899

METRO reviewed the list of navigable WOTUS for the Galveston District within the State of Texas to determine if the Rivers and Harbors Act of 1899 applies (USACE, 2011).

3 Existing Conditions

Existing water resources within the study area consist of a mix of natural channels, concrete lined opened channels, and under the road culverts or storm drains. The following subsections describe the water resources in the study area.

3.1 Surface Waters

Surface waters within the study area are located within six local watersheds, which include the City of Houston-Buffalo Bayou, Keegans Bayou-Brays Bayou, Country Club Bayou-Brays Bayou, Halls Bayou, Hunting Bayou, and Vince Bayou-Buffalo Bayou (See **Figures 3-1** through **3-1**). The Build Alternative includes a proposed alignment crossing over the Buffalo Bayou, which is considered a TNW. In general, the watersheds are characterized by disturbances associated with roadways, commercial, industrial, and residential development.

Tables 3-1 and **3-2** show the flowlines and waterbodies identified in the study area. Flowlines represent surface waters like streams and rivers, while waterbodies identify surface waters like lakes and ponds. These flowlines and waterbodies represent surface waters that fall under CWA regulations. There are five named waterways, including the Bering Ditch, Brays Bayou, Buffalo Bayou, Halls Bayou, and Hunting Bayou, and 3 unnamed tributaries within the study area. There are also a number of culverts under the road that convey drainage. Existing stormwater runoff within the local watersheds is managed by mowed turf and green areas adjacent to the existing road.

Buffalo Bayou and an unnamed tributary to Buffalo Bayou, located in Segment 4, were identified as impaired. Causes of impairment in Buffalo Bayou are due to bacteria, dioxin in edible tissue, polychlorinated biphenyls (PCBs) in edible tissue, and toxicity in sediment. Impairments to the unnamed tributary of Buffalo Bayou are due to depressed dissolved oxygen levels (TCEQ, 2020). Hunting Bayou, located in Segment 5, impairments are due to depressed dissolved oxygen (TCEQ, 2020). Potential impact to these waters could occur where the proposed alignment crosses over them.

Table 3-1: University Corridor NHD Flowlines and Waterbodies

Segment	Flowlines	Waterbodies	Major Waterbodies
Segment 1	32	24	Brays Bayou
			Bintliff Ditch
Segment 2	2	1	Poor Farm Ditch
Segment 3	1	2	Brays Bayou
			Buffalo Bayou
Segment 4	10	5	Unnamed tributary
			Buffalo Bayou
Segment 5	31	15	Halls Bayou
			Hunting Bayou
			Unnamed tributary of Halls Bayou
			Unnamed tributary of Hunting Bayou

Segment 4	Buffalo Bayou	Bacteria, dioxin in edible tissue, PCBs in edible tissue and toxicity in sediment
	Unnamed tributary of Buffalo Bayou	Depressed dissolved oxygen
Segment 5	Hunting Bayou	Depressed dissolved oxygen

Source: TCEQ Texas Integrated Report of Surface Water Quality for Clean Water Act Sections 305(b) and 303(d), 2020 Index of All Impaired Waters, 2020

3.2 Groundwater

The major aquifer in the Houston area is known as the Gulf Coast Aquifer and consists of complexly interbedded clays, silts, sands, and gravels of Cenozoic age, which are hydrologically connected to form a large, leaky artesian aquifer system. The Gulf Coast Aquifer parallels the coastline and increases in the direction of the Gulf of Mexico. This aquifer system is comprised of four major components, and several recognized water producing formations. The Chicot Aquifer, which is the upper component of the Gulf Coast Aquifer system, consists of the Willis Sand, the Bentley and Montgomery Formations, the Beaumont Clay, and overlying alluvial deposits. The Lissie formation is considered by some to be equivalent in age to the Montgomery and Bentley Formations. The Burkeville Clay lies beneath the Evangeline Aquifer and separates it from the Jasper Aquifer. The Gulf Coast Aquifer is not designated as a sole-source aquifer by the state, and the study area is not located in a protected aquifer recharge or discharge zone One hundred and forty-six water wells have been drilled within the study area (TWDB, 2022).

3.3 Wetlands

The NWI maps the following 21 types of wetlands within the study area (United States Fish and Wildlife Service [USFWS], 2022):

- E1UBLx (Estuarine and Marine Deepwater)
- PEM1A (Freshwater Emergent Wetland)
- PEM1Ax (Freshwater Emergent Wetland)
- PEM1Cx (Freshwater Emergent Wetland)
- PEM1F (Freshwater Emergent Wetland)
- PEM1K (Freshwater Emergent Wetland)
- PEM1Kx (Freshwater Emergent Wetland)
- PFO1A (Freshwater Forested/Shrub Wetland)
- PFO1C (Freshwater Forested/Shrub Wetland)
- PSS1C (Freshwater Forested/Shrub Wetland)
- PAB4F (Freshwater Pond)
- PAB4Fx (Freshwater Pond)
- PUBFx (Freshwater Pond)
- PUBHx (Freshwater Pond)
- PUBKx (Freshwater Pond)
- R2UBH (Riverine)
- R2UBHx (Riverine)
- R4SBC (Riverine)
- R4SBCx (Riverine)
- R5UBFx (Riverine)
- R2UBH (Riverine)

The NWI data identified 108 features covering approximately 640 acres (see **Table 3-3**). Segment 4 contains the most mapped wetlands by the NWI; however, it does not necessarily mean they are USACE jurisdictional wetlands. General categories of jurisdictional wetlands include wetlands adjacent to TNWs, wetlands that directly abut non-navigable tributaries with relatively permanent flow, and wetlands that have a significant nexus or connection to a TNW. METRO identified 1 potentially jurisdictional wetland feature within the study area (Segment 5), using the protocol described in **Section 2.0**. **Figures 3-1** to **3-6** show the NWI wetlands, and the wetland feature that METRO identified within the study area. The wetland feature is shown in more detail in **Figure 3-6, wetland data sheets can be found in Appendix B**.

Table 3-3: Acres of NWI Wetlands in the Study Area

Wetland Type	Segment 1	Segment 2	Segment 3	Segment 4	Segment 5	All Segments
Estuarine and Marine Deepwater	0.00	0.00	0.00	116.03	0.00	116.03
Freshwater Emergent Wetland	8.25	0.00	0.00	212.82	2.83	223.90
Freshwater Forested/Shrub Wetland	48.65	0.00	0.34	8.26	11.20	68.45

3.4 Floodplains

There are 6,183.44 acres of the 100-year floodplains and 3,108.07 acres of 500-year floodplains within the study area (see **Figures 3-1** through **3-5**). Segment 5 is the largest segment by area, so it is logical that it has the most acreage of floodplain. It has proportionally more floodplains as well because it contains Hunting Bayou and Halls Bayou, which are major surface waters and therefore, floodways. Segments 1 through 4 have fewer floodways and floodplains than Segment 5, and they cover an average of 16 percent of the total land area. A summary of the floodplain and floodway acreages is included in **Tables 3-4** and **3-5** and the floodplain and floodway boundaries area shown in **Figures 3-1** through **3-5.** No floodways have been designated by FEMA for drainages within the study area. A proposed underpass that would be located on Lockwood Drive underneath Harrisburg Boulevard would not be located within the 100-year floodplain, and would be designed to include a detention pond and pump stations. See **Appendix C** for information on the proposed underpass.

Table 3-4: Floodplains within the Study Area

Floodplain Type	Segment 1		Segment 2		Segment 3		Segment 4		Segment 5		All Segments	
	Area (Acres)	Percent Cover	Area (Acres)	Percent Cover	Area (Acres)	Percent Cover	Area (Acres)	Percent Cover	Area (acres)	Percent Cover	Total Area (Acres)	Total Percent Cover
100-year Floodplain	999.66		13.51		215.78		304.22		3,651.27			
500-year Floodplain	1,342.51	29.16	189.65	5.78	208.04	13.54	135.89	13.00	1,231.98	52.74	9,160.62	29.17

3.5 Rivers and Harbors Act of 1899

According to the USACE list of navigable WOTUS, Buffalo Bayou is considered a Traditionally Navigable Water (TNW). Currently no impacts to the bridge are anticipated besides minor modifications such as striping and lighting changes. Coordination would be conducted with the United States Coast Guard (USCG) for these modifications.

4 Environmental Commitments

4.1 Short-Term Construction Impacts

Potential short-term impacts would occur as the Build Alternative is constructed. Construction activities could include clearing vegetation, removing soil, importing fill material, and the changes associated with grading and soil compaction. These activities can alter a site's ability to absorb and retain water, which can cause erosion and sediment loading to surface waters. Increased sediment loading could increase nutrient concentrations, harm benthic biota, reduce fish habitat, and, depending on the organic content of suspended sediment, decrease dissolved oxygen levels in receiving waters. In addition, construction runoff could include debris from demolition. Accidental spills of construction chemicals could also occur.

In-water construction activities, such as placement of piers, would have short-term impacts on water quality. Installation of bridge pilings within water crossings such as Buffalo Bayou, would require in-water construction. Bridge pier installation would release sediments into the water column. These sediments would temporarily increase turbidity and would decrease light transmission in the water near active construction.

The Build Alternative could increase infiltration rates and potentially increase pollution from roadway runoff; however, it is anticipated to be minimal. Any construction below the ground surface would locally disturb the uppermost soil layer into which rainwater infiltration occurs. The addition of impervious cover, both temporary and permanent, would alter the infiltration rate in the subsurface within the Project ROW. Construction could also encounter groundwater. If groundwater is encountered, it is typically removed and disposed of, to avoid contaminating or polluting groundwater. Well records indicate that 146 public water supply wells are located within the study area. Sixty are unused or plugged and 85 are currently used for public supply and industrial use.

4.2 Long-Term Operational Impacts

Long-term impacts of the Build Alternative would include the permanent loss to potential WOTUS by constructing new structures and widening existing structures, including bridges and culverts. At crossings where existing culverts are present, impacts within the footprint of the current existing road structure are assumed to be temporary since the feature is considered previously impacted within those limits. Impacts associated with proposed fill outside of the existing structure for widening the culvert or riprap placement are assumed to be permanent. **Table 3-1** lists the potentially affected surface waters, their respective watershed, stream type, and potential impact acreage.

5 Mitigation Measures

This report is based on the current progress of the 30 percent preliminary engineering design. This design may be refined as the Project design advances. Further, minimization and mitigation measures are subject to change based on advances to the proposed Build Alternative.

5.1 Surface Waters

During construction of the Build Alternative, potential impacts to surface waters would be minimized by adhering to compliance measures and permitting described in the following sections. Metro included design features to avoid and minimize potential impacts to surface waters and constructing or widening bridges, including primarily utilizing existing roadway structures over water features. Metro would acquire necessary permits as described below before initiating construction, including:

- USACE Section 404 NWP 14 with Pre-Construction Notification (PCN) for impacts to WOTUS and the delineated wetland.
- TCEQ Texas Pollution Discharge Elimination System (CWA Section 402) Construction General Permit
- TCEQ Section 401 Water Quality Permit
- FEMA and Local Floodplain Administrator approvals for impacts to floodplains.

The detailed drainage study for the Build Alternative would be used to determine the appropriate locations and sizes of water quality ponds, rain gardens, bridges, culverts, or other drainage structures that would be required to mitigate risks incurred by the construction of the Build Alternative. Federal, state, and local authorities would have the opportunity to review the drainage study to verify that appropriate measures have been proposed such that the Build Alternative would not increase the flood risk to adjacent properties.

Avoidance and Minimization: In accordance with Section 404 (b)(1) guidelines and pursuant to the Final Mitigation Rule (40 Code of Federal Regulations [CFR] 230.91), Metro would take appropriate and practicable steps to avoid and minimize adverse impacts to WOTUS during construction. Measures to avoid and minimize impacts could include:

- Temporary fills would consist of materials that could not be eroded by expected high flows.
- Temporary fills would be removed in their entirety and the affected areas returned to pre-construction elevations as soon as practicable after construction.
- No activity would be permitted to use unsuitable material (trash, debris, car bodies, asphalt, etc.). Material used for construction or discharged must be free from toxic pollutants in toxic amounts.
- The areas affected by temporary fills would be revegetated as soon as practicable after construction.
- The placement of drainage swales in WOTUS would be avoided and, if unavoidable, minimized and constructed to not drain WOTUS.
- In wetland areas disturbed by construction, a minimum of 12 inches of topsoil material from the wetland would be stockpiled and used as backfill material to restore preconstruction contours.
- Open bottom culverts would be used in place of closed culverts where practicable.
- Construction detention basins would be off channel.

Maintain Low Flow: In compliance with the CWA and under USACE general conditions, Metro would design and construct all crossings of WOTUS to maintain low flows and avoid stream relocations during construction and operation of the Build Alternative.

Pre-construction Conditions: In compliance with the CWA and under USACE general permit conditions, Metro would require the construction contractor to restore and document preconstruction contours and remove temporary fills from all temporarily impacted WOTUS (e.g., temporary equipment crossings or temporary disturbances in construction areas around and beneath the Build Alternative) to pre-construction conditions.

CWA Section 404 Permit: Where avoidance of impacts to WOTUS is not practicable, Metro would utilize a Section 404 Permit from the USACE Galveston district prior to initiating construction. The decision to issue a permit rests with the USACE District Engineer and is based on a number of considerations, including conservation, economics, aesthetics and several other factors. Metro, under the oversight of the USACE, would comply with all the conditions required in the Section 404 permit during construction and operation of the Build Alternative. Permanent impacts would be updated as design progresses. The USACE Section 404 NWP 14, Linear Transportation Projects, with a PCN would be anticipated for impacts to the delineated wetland.

The environmental analysis does not reflect details that may be developed during the bridge design competition that include structural type, footprint in the water for bridge supports, or the configuration of the bike/ ped elements. However, minimum design criteria will be specified in the design competition that includes vertical clearance to maintain recreational use and remain above required floodplain elevations as well as maximum surface area for structural supports within the lake to remain within the USACE NWP 14 requirements.

Waters of the U.S. Mitigation Plan: Compensatory mitigation is not considered until after all steps have been taken to first avoid and minimize adverse impacts to the aquatic ecosystem (USACE 2008). If compensatory mitigation is determined to be required by USACE METRO would develop a mitigation plan as part of CWA Section 404 Permit to provide compensatory mitigation for unavoidable permanent impacts in accordance with the requirements of the CWA and as agreed upon by the USACE District, including specific mitigation guidelines. The mitigation plan would include sufficient detail to demonstrate measures taken to avoid, minimize and mitigate the aquatic functions that would be lost or impaired as a result of the Build Alternative.

5.2 Groundwater

During construction of the Build Alternative, potential impacts to groundwater would be minimized by adhering to compliance measures and permitting described below. METRO would require that the Build Alternative contractor plug any unavoidable and unregistered wells discovered during construction, according to TCEQ regulations, to eliminate the potential for impacts to groundwater resources. Compliance measures with COH land ordinance codes, City of Houston Infrastructure Design Manual (COH) and Stormwater Control Measurers, where feasible, would be adhered to and incorporated during final design. The following compliance measures are anticipated to be required for water quality, stormwater, safe drinking water, and groundwater as a result of the Build Alternative (subject to changed based on further design.).

Section 401 Water Quality Certification. Prior to construction and concurrent with the Section 404 process, METRO would complete a Tier II Certification Questionnaire and Alternatives Analysis Checklist for review by TCEQ to obtain a Section 401 Water Quality Certification. TCEQ could request additional information from METRO.

Texas Pollutant Discharge Elimination System (TPDES) General Construction Permit (TXR150000) Prior to construction, METRO would prepare a Stormwater Pollution Prevention Plan (SWPPP) for the Build Alternative or for each construction segment and submit a NOI to TCEQ (with the appropriate fees) to obtain coverage under the General Construction Permit. Before starting construction, METRO would ensure a copy of the Site Notice is posted at the construction site and the notice would remain posted until construction is completed. Activities conducted during construction must adhere to General Construction permit requirements.

Stormwater Management/Stormwater Pollution Prevention Plan. Prior to construction, Metro would prepare an SWPPP and submit an NOI to TCEQ to address authorized discharges that would reach WOTUS, including discharges to MS4s that drain to WOTUS, to identify and address potential sources of pollution that are reasonably expected to affect the quality of discharges from the construction site. Metro would be responsible for implementing the SWPPP throughout the construction period. During construction, Metro would restrict construction activities to permanent and temporary workspaces and easements.

To address Section 401 Water Quality Certification requirements, Metro would identify and implement temporary stormwater controls. METRO would implement sediment control measures prior to the start of and during construction and isolate the construction area from waterbodies and wetlands. METRO would store dredged and fill material in a way that prevents sedimentation runoff to waterbodies. Control measures could include the following:

- Sandbag berm
- Silt fence
- Triangular filter dike
- Rock berm
- Hay bale dike
- Erosion control compost
- Compost filter socks
- Mulch filter socks

METRO would stabilize disturbed areas during construction to prevent sediment from entering adjacent waterbodies and wetlands. Stabilization measures could include the following:

- Temporary vegetation
- Blankets/matting
- Mulch
- Sod
- Interceptor swale
- Diversion dike
- Erosion control compost
- Mulch filter socks
- Compost filter socks

As part of compliance with TPDES and any MS4 requirements, prior to construction, METRO would provide MS4 operators (including the COH) a copy of the SWPPP and/or Notice of Intent (NOI), where required by local ordinance. During the construction phase, the MS4 operators could inspect the construction site as regularly as every 14 calendar days. METRO would conduct regular inspections, maintenance, and recordkeeping to determine whether appropriate control measures have been installed and implemented in accordance with the SWPPP and General Construction Permit.

5.3 Wetlands

METRO recommends appropriate avoidance, minimization and/or mitigation measures in accordance with the type of wetland (e.g., forested, emergent, scrub-shrub, etc.). Compensatory mitigation for unavoidable impacts to wetlands would be determined as design plans are developed. The Build Alternative would affect one emergent wetland. Compensatory mitigation can include the restoration, creation, and/or enhancement of wetlands.

As design progresses, METRO will take all measures feasible to avoid the existing wetland. If avoidance is not possible, METRO would request a Jurisdictional Determination from the USACE after design is complete to determine if the existing wetland is jurisdictional and is regulated under the CWA. If USACE determines the wetland is jurisdictional and impacts could not be avoided, it would be included in the Section 404 NWP 14 with PCN.

5.4 Floodplains

METRO designed the Build Alternative to avoid impacts to floodplains to the maximum extent feasible and practicable. Encroachments to floodplains were analyzed to determine any effects caused by the proposed facility should a 100-year flood occur. The hydraulic design practices of the Build Alternative would be in accordance with current FTA design policies and standards. The floodplain analysis Build Alternative does not indicate a significant encroachment to any area of the floodplains as defined in 23 CFR 650. Drainage impact analysis based on 30 percent design currently indicates no-rise to the 100-year floodplain, all rises in the floodplain would be reevaluated once the proposed roadway and bridge design has been finalized.

Further avoidance and minimization of floodplain encroachments would be considered during design of the Build Alternative. If METRO determines during design, that the Build Alternative would result in an increase of more than one foot of the base flood elevation, a conditional letter of map revision and coordination with the FEMA, USACE and the COH would be required.

METRO would design bridges, culverts, and cross-drainage structures to Federal Highway Administration (FHWA) standards for design events up to the 100-year storm event. METRO would also confirm that the Build Alternative would not adversely impact existing floodplain conditions within the vicinity of the study area for extreme events, (i.e., storm events in excess of a 100-year storm event) as design progresses. The following compliance measures could be anticipated to be required as a result of the Build Alternative (subject to change based on further design).

Floodplain Development Permit. During final design, METRO would obtain floodplain development permits from the local floodplain administrators/directors and comply with local floodplain regulations, as required by the floodplain development permits.

Construction Floodplain BMPs. During construction within floodplains, METRO would implement erosion and sedimentation controls in accordance with TPDES Permit No. TXR150000. METRO would conduct periodic site inspections and maintenance when BMPs are in place to identify and address areas requiring maintenance. METRO would maintain records of all inspections as part of the SWPPP. Local regulatory entities would have the authority to conduct additional inspections as they deem necessary. Compliance and measures, including temporary detention, would be used to offset potential significant encroachment (or effects) on floodplains from piers and construction within the floodplains.

At the conclusion of construction, site restoration, including vegetation replanting, would be performed by METRO in accordance with TCEQ CWA Section 401 water quality certification standards (refer to Section 401 Water Quality Certification).

For all stream crossings temporarily impacted during construction, METRO would implement BMPs in accordance with local regulating authorities, any local site development permits, and any USACE 404 permits. Typical BMPs could include:

- Passage of normal or high downstream flows would be maintained to the maximum extent practicable.
- Temporary fills would consist of materials that would not be eroded by expected high flows.
- Temporary fills would be removed in their entirety and the affected area returned to pre-construction elevation as soon as practicable after construction.
- The areas affected by temporary fill would be revegetated as soon as practicable after construction.

Operational Floodplain BMPs. During final design, METRO would incorporate permanent floodplain controls that could include swales, vegetative strips, and soil stabilization measures to reduce peak flow rates in compliance with current applicable floodplain permit requirements.

Channel Stability. During final design, METRO would follow the latest FHWA Hydrologic Engineering Center (HEC)-20 and HEC-18 procedures to maintain stable stream channels and protect existing and planned infrastructure. These procedures would apply to hydraulic structures, outfalls, intakes, bridges, rail crossings of roads regulated by FHWA and the Texas Department of Transportation (TxDOT), and rail crossings over waterbodies.

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ Marl Deposits (B15) **(LRR U)**
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)
- ☐ Sphagnum moss (D8) **(LRR T, U)**

Field Observations:

Surface Water Present?	Yes _____	No X	Depth (inches): _____
Water Table Present?	Yes _____	No X	Depth (inches): _____
Saturation Present? (includes capillary fringe)	Yes _____	No X	Depth (inches): _____

Wetland Hydrology Present? Yes _____ No _____

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vine – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** _____ **No** X

Remarks: (If observed, list morphological adaptations below).

SOIL

Sampling Point: _____

Preface to Design Documents

DATE: May 31, 2023

PREFACE

The intent of this Preface is to provide context to the various design documents received as part of the 30% submittal and to highlight previous efforts that helped establish the current design.

The paradigm of the METRORapid University Corridor Bus Rapid Transit (BRT) project (the "University Corridor" or the "Project") is **to repurpose the use of the existing Right-of-Way (ROW) to provide maximum mobility benefit for all travel modes while minimizing impacts**. The additional mobility benefits include the use of high-capacity, low-no emission transit buses, which carry more people than vehicles in the same space; wider pedestrian spaces with buffer zones; shared use pathways to accommodate bicycle travel; and an overall safer roadway design that aligns with Houston's Vision Zero principles. The impacts considered for the Project include minimizing additional ROW needs, maintaining acceptable vehicle traffic conditions on a transit-priority street, preserving existing trees, avoiding conflicts with major utilities, utilizing existing bridge structures with minimal modifications and reducing the amount of additional impervious area within the ROW in order to minimize potential flooding along the corridor.

To maximize the mobility benefits and minimize overall impacts, the Project design approach is to utilize the existing roadway footprint to service both the BRT and general purpose lanes. In general, one of the existing general purpose lanes in each direction would be converted to a dedicated BRT lane where the alignment is within the City of Houston (COH) ROW. This approach would introduce high-capacity transit buses onto existing streets within an exclusive BRT guideway, while minimizing impacts to the existing features within the COH ROW. With the removal of a general purpose lane in each direction, it is anticipated that vehicle traffic capacity will be reduced and impact traffic conditions. However, METRO and COH share the goal of prioritizing person throughput over vehicle throughput: simply stated, **the vision is to move more people in less space**. This shared goal is documented in a *Memorandum of Understanding* (MOU) approved by both entities on August 22, 2022, which is included as an appendix in the *Traffic Analysis,* dated May 31, 2023.

As the majority of the University Corridor will operate within COH ROW and along COH streets, continuous and constant coordination with COH during conceptual and preliminary design phases was paramount. Initial discussions of the person-throughput prioritization occurred early in the project to ensure all parties agreed with the approach. With input from COH, METRO developed a throughput methodology and provided some initial findings. This was documented in a *Throughput Methodology and Findings* memorandum prepared and updated by METRO on March 9, 2022, which is included as an appendix in the *Traffic Analysis*, dated May 31, 2023. Additional discussions with and input from COH continued as the traffic analysis and design progressed incorporating the conversion of general purpose lanes to BRT lanes and towards the 30% design milestone.

The traffic modeling and design efforts were performed in parallel with constant coordination to ensure that the lane configurations in both the traffic model and the design plans coincided with each other. As the traffic analysis focused on the impacts to vehicle traffic conditions, the design considered impacts resulting from ROW limitations, locations of existing trees and major utility facilities, existing roadway and bridge sections and the results of drainage analyses. At certain intersections within COH ROW with a projected vehicle Level of Service (LOS) that was less than desirable, several mitigation scenarios were analyzed to improve the LOS while considering the above referenced impacts with ROW needs being the most influential. These intersection locations and mitigation scenarios were discussed with COH during several coordination meetings. A summary of these meetings and the tables and exhibits prepared are included in the *Traffic Analysis*, dated May 31, 2023. These documents show the lane configurations considered for each mitigation scenario as well as demonstrate the trade-offs required to implement each scenario. As a result of these meetings, the preferred lane configurations were selected and included in the traffic model and in the design documents.

As part of the multi-modal approach for the Project, improved pedestrian mobility is also being considered. A pedestrian realm that is located between the back of curb or edge of pavement and the edge of ROW is included along the corridor that provides an unobstructed sidewalk or sidepath and a safety buffer area that separates the sidewalk from the roadway. Ideally, the pedestrian realm would be wide enough to accommodate both people walking and biking. However, the University Corridor extends along existing ROW of various widths and through different area types, including neighborhoods, businesses and schools. Considering these factors, the pedestrian realm dimensions will vary to remain sensitive to the area's local context and to minimize impacts to ROW. Where dimensions are less than desirable, discussions with COH have occurred to receive feedback and input. In a limited number of locations, design exceptions will be required to justify smaller pedestrian realm dimensions than COH standards and will need to be approved by COH as designs are progressed. Pedestrian design and exceptions are noted in the *Basis of Design* (BOD) documents for each Segment.

To further enhance pedestrian mobility, additional pedestrian crossings are being proposed along the University Corridor. In general, pedestrian crossings are provided at all of the signalized intersections along the alignment. However, this results in sections along the corridor with relatively long distances between proposed crossing points. With feedback and general guidance from COH, additional crossing locations are proposed that consider, among other factors: key destinations, local bus stops, distances between crossings and safety. These proposed pedestrian crossings will significantly enhance the ability of people to cross the BRT alignment by walking or biking at regular well-space intervals. These additional pedestrian crossings are reflected in the 30% design submittal.

APPENDIX C-10 – Traffic Analysis Technical Memorandum

1 Executive Summary

A traffic analysis was performed for the proposed University Line Bus Rapid Transit (BRT) Project (BRT Project) being planned by the Metropolitan Transit Authority of Harris County (METRO) and in accordance with standard traffic engineering practices using TransModeler software. This report describes the methodology of the traffic analysis performed, estimates the impact that the proposed BRT project would have on traffic conditions along the proposed route, outlines the traffic related coordination performed with other public agencies, including the City of Houston (COH) and the Texas Department of Transportation (TxDOT), and summarizes the safety enhancements provided as part of the Project.

The METRORapid University Corridor Project is a proposed 25.3-mile BRT line from Westchase Park & Ride to the Tidwell Transit Center featuring dedicated bus lanes and over 40 stations as shown in **Figure 1** of the report. The Project corridor is divided into five (5) separate segments as noted in **Table 1** of the report. The traffic model analyzes 102 intersections within the five segments. The Project's paradigm is to repurpose the use of existing Right-of-Way (ROW) to provide the maximum mobility benefit for all travel modes while minimizing impacts. Additional mobility benefits include the use of high-capacity transit buses, wider pedestrian spaces with buffer zones, shared use pathways and an overall safer roadway design. The impacts considered for the Project include minimizing additional ROW needs, maintaining acceptable vehicle traffic conditions, preserving existing trees, avoiding conflicts with major utilities, utilizing existing bridge structures with minimal modifications and reducing the amount of additional impervious area within the ROW to minimize drainage capacity issues along the corridor. METRO and COH share the goal of prioritizing person throughput over vehicle throughput to offset any impacts to vehicle traffic conditions. This shared goal is documented in a Memorandum of Understanding (MOU) approved by both entities on August 22, 2022. A copy of this MOU is included in **Appendix K**.

Traffic data were collected at all signalized intersections (existing and proposed) along the proposed BRT route in September of 2021 with supplemental counts being performed in February and March of 2022. Peak hour traffic at each intersection was determined for the corridor peaks, which varied from segment to segment. Field observations were also conducted to establish the existing geometrics at each intersection, while existing traffic signal timings were obtained from the COH for input into the existing models. The existing conditions models were developed in TransModeler software for both the AM and PM peak periods. These models were then calibrated to ensure the traffic volumes at each intersection, as well as the travel times and speeds of vehicles, matched existing condition field data and to confirm that they were an accurate representation of the real-world conditions. These models serve as the basis for all future year modeling.

The METRO version of the Houston-Galveston Area Council (H-GAC) model demographic and network inputs from H-GAC's official scenarios were used to develop traffic growth rates for the study area. Three scenarios were run including the 2020, 2045 No-Build, and 2045 Build. The difference between 2045 No-Build and 2045 Build is the exclusion of the BRT Project in the 2045 No-Build Scenario. This modeling effort was used to develop traffic growth rates for both the 2030 No-Build and 2030 Build scenarios, which were studied using TransModeler. The growth rates for

the Build scenarios are slightly lower than those for the No-Build scenarios accounting for the modal shift of person trips from vehicular traffic to the proposed BRT. Separate growth rates were developed for each segment of the project as the adjacent land uses, and development patterns vary between them. Additionally, in Segments 4 and 5 of the corridor, traffic volumes along Lockwood Drive were reduced by 10 percent from the calculated future 2030 Build traffic volumes to account for traffic shifting to adjacent parallel routes following the construction of the BRT Project. Refer to section 3.2.1 for further discussion on the calculated future traffic volumes in Segments 1, 2, and 3, which were not reduced since there were no parallel routes with excess capacity based on the projected volumes in the H-GAC model.

TransModeler was used to develop traffic models of the 2030 No-Build and 2030 Build scenarios. The results from these models were compared to determine the impact of the proposed BRT Project. The primary Measure of Effectiveness (MOE) used for this comparison was the Level of Service (LOS) at the signalized intersections during AM and PM peak periods throughout the proposed BRT corridor. LOS is a measure of how much delay occurs at an intersection during a peak hour. The criterion for LOS is outlined in the Highway Capacity Manual, 7th Edition (Transportation Research Board, 2022). Depending on the amount of delay at an intersection, a LOS between A and F is applied to the intersection. A LOS of A through D is generally considered to be an acceptable amount of delay, while a LOS of E or F is generally considered to be unacceptable. As the analyses are performed for the AM and PM peak periods, it is noted that the LOS determined for each intersection should be considered as the worst condition anticipated for that intersection.

Adjustments to the proposed roadway geometrics were made in the 2030 Build Conditions Models based on the 30% design developed by METRO and submitted to the FTA. In general, one of the existing general-purpose lanes in each direction will be converted to a dedicated BRT lane throughout the majority of the corridor and within COH ROW. With the removal of a general-purpose lane in each direction, it is anticipated that traffic capacity will be reduced with resulting impacts to traffic conditions as reflected in the LOS for each intersection. However, when these traffic impacts are considered in the context of the multi-modal approach of the Project, the desire to move a higher number of people through the corridor and the negative impacts to adjacent properties that would be required to bring the LOS to within acceptable limits, the traffic impacts are more justifiable. **Appendix L** contains a copy of the throughput methodology and findings which were conducted within the study area.

Appropriate adjustments were also made in the 2030 Build traffic models to simulate the interaction of the proposed BRT vehicles with the traffic signals. Within Segment 1 from the intersection of Westpark Drive with Fondren Road to the intersection of Westpark Drive with the IH-610 Frontage Roads, the proposed BRT was modeled in a parallel guideway south of Westpark Drive. In this area, traffic signal pre-emption was used to stop traffic across the BRT guideway as the buses approach and then travel through the intersection. After the BRT vehicle travels through these intersections, the traffic signal reverted back to normal operations. To the east of IH-610 and for the remainder of the corridor, the BRT guideway was located in the center of existing streets. At those intersections where the BRT vehicles travel straight through the intersection, they were provided a green signal along with the adjacent through movements on the street. Transit signal priority (TSP) was implemented at these locations to extend green time for the bus through

movements up to 10 seconds should a BRT vehicle be approaching the intersection as the green time was ending. Left turns from the BRT corridor were converted to protected only phasing and separated from the through movements to control movements across the BRT guideway. Where the BRT vehicle was to turn from one street to another, a separate BRT phase was added to the intersection to stop other traffic while the bus made this movement. Separate BRT phases were also used at all interchanges with freeway frontage roads. Pedestrian phases are provided where they currently exist in the signal timing plans developed by the City of Houston. The existing crossing times are adequate to provide time for pedestrians to cross to the center stations throughout the project.

Results of the 2030 build conditions traffic models were used to further refine the proposed geometric design of the University Line BRT Project. For example, queue information from the models were used to develop the length of proposed left turn lanes along the route.

The below sections summarize the intersections that have vehicular traffic impacts and are projected to perform at LOS E or F by segment. Further discussion of these intersections and associated impacts is presented later in this report.

1.1 Segment 1 – Potential Traffic Impacts

Multiple intersections operated at an overall LOS of E or F under the 2030 No-Build scenario and continued to do so under the 2030 Build Scenario in Segment 1 including:

- Eastbound Westpark Tollway Exit Ramp at Fondren Road
- Westpark Drive at Fondren Road
- Westpark Drive at Hillcroft Avenue
- Westpark Drive at Chimney Rock Road (AM Peak)
- Westpark Drive at S Rice Avenue
- Westpark Drive at IH-610 southbound (SB) Frontage Road (AM Peak)
- Westpark Drive at Newcastle Drive (AM Peak)

Three intersections operated at an overall LOS of D or better under the 2030 No-Build Scenario but are projected to operate at an overall LOS of E or F under the 2030 Build Scenario including:

- Westpark Drive at Renwick Drive (AM Peak)
- Westpark Drive at Alder Drive (AM Peak) – No Build operates as an unsignalized intersection
- Westpark Drive at Chimney Rock Road (PM Peak)

There were also two intersections at which the LOS was improved with the proposed BRT project from the 2030 No-Build Scenario to the 2030 Build Scenario including:

- Westpark Drive at Royalton Street – Improved since intersection is signalized under the Build Scenario.
- Westpark Drive at IH-610 northbound (NB) Frontage Road – Improved with new phasing pattern implemented which reduced delays.

1.2 Segment 2 – Potential Traffic Impacts

Multiple intersections operated at an overall LOS of E or F under the 2030 No-Build scenario and continued to do so under the 2030 Build Scenario in Segment 2 including:

- Richmond Avenue at Buffalo Speedway (PM Peak)
- Richmond Avenue at Kirby Drive (PM Peak)
- Richmond Avenue at Dunlavy Street
- Richmond Avenue at Mandell Street (PM Peak)
- Richmond Avenue at Montrose Boulevard
- Richmond Avenue at US 59 / Spur 527 SB Frontage Road (PM Peak)

Several intersections operated at an overall LOS of D or better under the 2030 No-Build Scenario but are projected to operate at an overall LOS of E or F under the 2030 Build Scenario including:

- Westpark Drive at Weslayan Street (AM Peak)
- Westpark Drive at Edloe Street (AM Peak)
- IH-69 Express Lanes at Edloe Street (PM Peak)
- Richmond Avenue at Edloe Street (PM Peak)
- Richmond Avenue at Eastside Street (AM Peak)
- Richmond Avenue at Kirby Drive (AM Peak)
- Richmond Avenue at Woodhead Street
- Richmond Avenue at Mandell Street (PM Peak)
- Richmond Avenue at US 59 / Spur 527 SB Frontage Road (AM Peak)
- Richmond Avenue at US 59 / Spur 527 NB Frontage Road

1.3 Segment 3 – Potential Traffic Impacts

Several intersections operated at an overall LOS of D or better under the 2030 No-Build Scenario but are projected to operate at an overall LOS of E or F under the 2030 Build Scenario including:

- Richmond Avenue at Main Street
- Wheeler Avenue at San Jacinto Street
- Wheeler Avenue at La Branch Street
- Wheeler Avenue at Almeda Street

There were also two intersections at which the LOS was improved with the proposed BRT project from the 2030 No-Build Scenario to the 2030 Build Scenario including:

- Wheeler Avenue at Hutchins Street - Improved since the intersection is signalized under the Build Scenario.
- Ennis Street at Alabama Street - Improved since the intersection is signalized under the Build Scenario.

1.4 Segment 4 – Potential Traffic Impacts

Several intersections operated at an overall LOS of D or better under the 2030 No-Build Scenario but were projected to operate at an overall LOS of E or F under the 2030 Build Scenario including:

- Lockwood Drive at Leeland Street (AM Peak)
- Lockwood Drive at Canal Street (PM Peak)
- Lockwood Drive at Marron Park Way (AM Peak) – Future signalized intersection by others

1.5 Segment 5 - Potential Traffic Impacts

One intersection operated at an overall LOS of D or better under the 2030 No-Build Scenario but was projected to operate at an overall LOS of E or F under the 2030 Build Scenario including:

- Tidwell Road at Jensen Drive (PM Peak)

1.6 Safety Analysis

Reported crashes within the proposed BRT corridor in 2017, 2018, and 2019 were analyzed and the crash rate per 100 Million Vehicle Miles Traveled (VMT) was calculated for both the overall corridor and each individual segment. A total of 2,044 crashes were reported over the three-year period. Crash rates for the overall corridor and all segments exceeded the statewide average for similar facilities. The highest crash rates were observed in Segment 3.

The proposed BRT Project will improve safety throughout the proposed corridor by reducing conflict points due to the center running BRT. Approximately 114 unsignalized median openings throughout the corridor will be closed to control access to and from the BRT route. In addition, permitted left turns will be eliminated throughout the BRT route to control left turns across the BRT guideway. Other safety enhancements within the corridor include improvements to the pedestrian realm to provide sidewalks or sidepaths for pedestrian and bicyclists areas to travel along the corridors reducing conflicts with vehicles.

1.7 Traffic Summary

Considering the Project's paradigm to repurpose the existing ROW to provide maximum benefit to all travel modes and the shared goal between METRO and COH of prioritizing person throughput over vehicular throughput, the Project does not have significant traffic impacts. While vehicular traffic delays are projected at some intersections during certain peak periods along the corridor, the vast majority of the corridor is projected to have acceptable, if not improved, vehicular traffic conditions. Additionally, the safety enhancements provided and the improved facilities offered for transit, pedestrian and bicycle travel modes will result in a better multi-modal experience along the University Corridor.

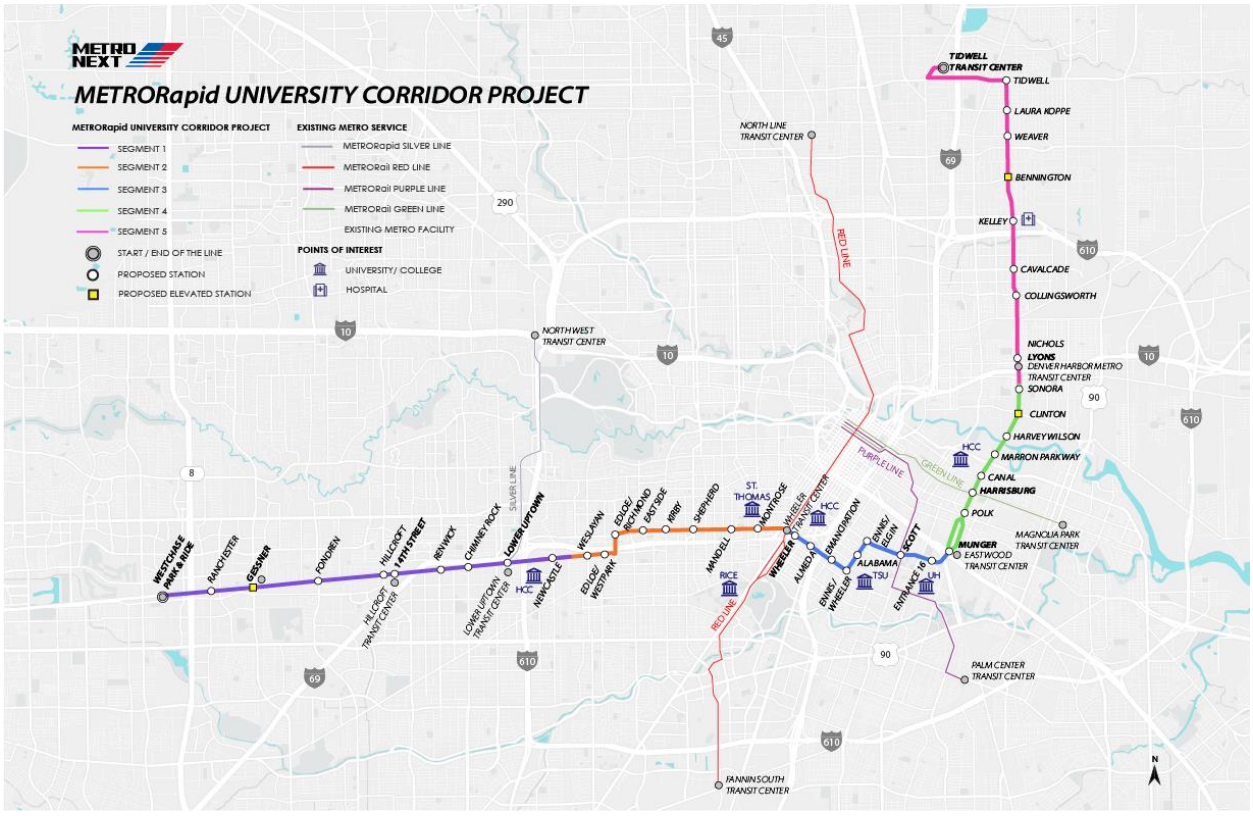
2 Introduction

The Federal Transit Administration (FTA) and METRO are conducting the environmental review process for the MetroRapid University Corridor Project (the "Project") in Harris County, Texas in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Categorical Exclusion is being prepared as part of this process. FTA is the Federal Lead Agency, and METRO is the Local Project Sponsor responsible for implementing the Project. This traffic analysis report will be included with the NEPA documents.

2.1 Purpose of Report

This report describes the methodology of the traffic analysis performed for the BRT Project and outlines the results of the traffic analysis. The traffic analysis estimates the impact that the proposed BRT operations would have on traffic flow along the proposed route. The report also outlines some of the coordination performed with other public agencies, including COH and TxDOT, and summarizes the safety enhancements provided as part of the Project.

2.2 Project Overview



The BRT Project is a proposed 25.3-mile Bus Rapid Transit (BRT) line from Westchase Park & Ride to Tidwell Transit Center planned by METRO. Featuring dedicated bus lanes throughout and over 40 stations, the Project would bring fast, reliable transit to some of Houston's busiest and most densely populated areas. In addition, the Project would include upgrades to Westpark Park & Ride, Wheeler Transit Center, and Tidwell Transit Center; at least one new bus operating facility; and first-and-last mile solutions for transportation to stations. When complete, the Project would connect to all of METRO's existing light rail transit (LRT) and BRT lines, thereby supporting the development of a high-frequency, high-capacity transit network across Houston. The Project is a major component of METRO's METRONext: Moving Forward Plan (METRONext), and it represents METRO's largest planned investment in the busy west-southwest travel corridor.

From its origin at Westchase Park & Ride, the BRT line would travel east with METRO-owned right-of-way (ROW) parallel to Westpark Tollway and Westpark Drive and partially within COH ROW on Westpark Drive until the interchange with IH-610 where it would move to a center running BRT. Between the interchange of Westpark Drive and IH-610 and the Lower Uptown Transit Center the existing Silver Line will also run on the proposed guideway. This service currently is running on Westpark Drive and will be relocated to the new guideway following construction of the University Line project. From Edloe Street, the alignment turns east on Richmond Avenue to reach Wheeler Transit Center. At Main Street, where Richmond Avenue becomes Wheeler Avenue, the line would continue east on Wheeler Avenue to Ennis Street. The alignment turns north on Ennis Steet and then continues east on Elgin Street, which curves north underneath IH-45 and becomes Lockwood Drive. It would continue north on Lockwood Drive until turning west on Tidwell Road, north on Jensen Drive, and east on Turner Drive to reach its terminus at Tidwell Transit Center. The proposed BRT alignment for the Project is divided into five segments as noted in **Table 1**. The BRT layout along with connections to other METRO facilities, regional corridors, and points of interest is presented in **Figure 1**.

Table 1: University Corridor Segments

SEGMENT	FROM	TO
1	Westchase Park & Ride	Westpark Drive 1,500 feet east of UPRR tracks (Between Newcastle St and Weslayan St)
2	Westpark Drive 1,500 feet east of UPRR tracks (Between Newcastle St and Weslayan St)	Richmond Avenue 535 feet west of Main Street
3	Richmond Avenue 535 feet west of Main Street	Elgin Street at I-45 (Eastwood Transit Center)
4	Elgin Street at I-45 (Eastwood Transit Center)	Lockwood Drive at Margarita Street
5	Lockwood Drive at Margarita Street	Tidwell Transit Center

Figure 1: University Corridor Proposed BRT Alignment

2.2.1 Connectivity to Other Transportation Facilities and Modes

The proposed University Line BRT will connect to ten (10) existing METRO facilities where transit users will be able to connect to other modes of transportation. A description of each of these facilities, including the modes of transportation transit users will be able to access is presented below.

Westchase Park & Ride

The Westchase Park & Ride (P&R) is the western terminus of the proposed BRT Project. Transit users will be able to park their private vehicles in the parking lot at this location and transfer to the proposed University Line BRT service.

Transit users will also be able to transfer to other METRO bus routes including:

- Route 151 – Westpark Express

Gessner Park & Ride

The Gessner P&R is in the southeast quadrant of the intersection of Westpark Drive and South Gessner Road. Transit users will be able to park their private vehicles in the parking lot at this location and transfer to the proposed University Line BRT service.

Transit users will also be able to transfer to other METRO bus routes including:

- Route 046 - Gessner
- Route 151 – Westpark Express

Hillcroft Park & Ride

The Hillcroft P&R is located in the southeast corner of the intersection of Westpark Tollway and 14th Street. Transit users will be able to park their private vehicles in the parking lot at this location and transfer to the proposed University Line BRT service.

Transit users will also be able to transfer to multiple other METRO bus routes including the following:

- Route 151 – Westpark Express
- Route 152 – Harwin Express
- Route 153 – Harwin Express
- Route 269 – West Bellfort / Westwood P&R
- Route 309 – Gulfton Circulator
- Route 310 – Gulfton Circulator

Westpark / Lower Uptown Transit Center

The Westpark / Lower Uptown Transit Center is located on the south side of Westpark Drive between South Rice Avenue and the interchange with IH-610. Transit users will be able to transfer between the proposed University Line BRT and other METRO services. Other services at this location include the Silver Line BRT which runs between this location and the Northwest Transit Center.

Transit users will also be able to transfer to multiple other METRO bus routes including the following:

- Route 020 – Canal / Memorial
- Route 292 – Southwest Freeway / TMC
- Route 309 – Gulfton Circulator
- Route 310 – Gulfton Circulator

Wheeler Transit Center

The Wheeler Transit Center is located in the southeast quadrant of the intersection of Wheeler Avenue and Main Street. This transit center is a transfer location between modes of transit. Users of the proposed University Line BRT will be able to transfer to the exiting METRO light rail Red Line at this stop. The Red Line connects the Northline Transit Center to the Fannin South Transit Center with stops in Downtown Houston, the Texas Medical Center, University of Houston (UH) Downtown, and NRG stadium.

Transit users will also be able to transfer to multiple other METRO bus routes including the following:

- Route 005 – Southmore
- Route 025 - Richmond
- Route 065 – Bissonnet
- Route 152 – Harwin Express
- Route 153 – Harwin Express

Eastwood Transit Center

The Eastwood Transit Center is located adjacent to the intersection of Lockwood Drive and the IH-45 NB Frontage Road. Users of the proposed University Line BRT will be able to transfer to local bus service at this location.

Transit users will be able to transfer to multiple other METRO bus routes including the following:

- Route 004 – Beechnut
- Route 009 – Gulfton / Holman
- Route 025 – Richmond
- Route 040 – Telephone / Heights
- Route 041 – Kirby / Polk
- Route 050 – Broadway
- Route 080 – MLK / Lockwood
- Route 244 – Monroe / El Dorado P&R

Fifth Ward / Denver Harbor Transit Center

The Fifth Ward / Denver Harbor Transit Center is located along Lockwood Drive just north of the interchange with IH-10. Users of the proposed University Line BRT will be able to transfer to local bus that serve this location.

Transit users will be able to transfer to multiple other METRO bus routes including the following:

- Route 011 – Almeda / Lyons
- Route 028 – OST / Wayside
- Route 048 – Market
- Route 066 – Quitman
- Route 077 – Homestead
- Route 078 – Wayside
- Route 080 – MLK / Lockwood
- Route 137 – Northshore Express

Tidwell Transit Center

The Tidwell Transit Center is the northern terminus of the proposed BRT Project and is located near the interchange of Tidwell Road and IH-69 (US 59). Transit users will be able to park their private vehicles in the parking lot at this location and transfer to the proposed University Line BRT service. This transit center also provides direct access to the existing IH-69 HOV lanes via a T-Ramp which connects from the transit center to these lanes.

Transit users will be able to transfer to multiple other METRO bus routes including the following:

- Route 006 – Jensen / Greens
- Route 080 – MLK / Lockwood
- Route 083 – Lee Road / JFK

METRO Light Rail Purple Line Connection

A proposed station for the University Line BRT will be located on the east side of the intersection of Elgin Street and Scott Street. Transit users will be able to transfer from the proposed University Line BRT here to the existing METRO Light Rail Red Line via the Elgin / Third Ward station located on the north side of the intersection of Elgin Street and Scott Street. The existing Purple Line connects destinations in Downtown Houston to the Palm Center Transit Center in southeast Houston.

METRO Light Rail Green Line Connection

A proposed station for the University Line BRT will be located on the north side of the intersection of Lockwood Drive and Harrisburg Boulevard. Transit users will be able to transfer from the proposed University Line BRT at this location to the existing METRO Light Rail Green Line via the Lockwood Eastbound or Westbound stations located just to the west of the intersection of Lockwood Drive and Harrisburg Boulevard. The existing Green Line connects destinations in Downtown Houston to the Magnolia Park Transit Center.

METRO Light Rail Red Line Connection

Proposed stations for the University Line BRT will be located on the east side of the intersection of Wheeler Avenue and Main Street. Transit users will be able to transfer from the proposed University Line BRT at this location to the existing METRO Light Rail Red Line via the Wheeler Transit Center located at the southeast quadrant of the intersection of Wheeler Avenue and Main Street. The exiting Red Line connects destinations in Downtown Houston, the Texas Medical

Center and NRG Stadium between the Northline Transit Center and the Fannin South Transit Center.

METRO Bus Rapid Transit Silver Line Operations and Connection

The existing METRO BRT Silver Line will operate within the University Corridor's guideway from IH-610 to the Westpark/Lower Uptown Transit Center, which is located on the south side of Westpark Drive between South Rice Avenue and the interchange with IH-610. Transit users will be able to use the Westpark/Lower Uptown Transit Center to transfer between the proposed University Line BRT and the Silver Line, which runs between this location and the Northwest Transit Center.

The majority of the stations throughout the corridor will be center platforms with a few side stations throughout the corridor where necessary (primarily in Segment 1). The design of the stations are included in other documents developed for the proposed Project. The proposed stations as designed in the schematic drawings are included in the traffic models.

3 Methodology

The BRT Project's paradigm is to repurpose the use of existing ROW to provide the maximum mobility benefit for all travel modes while minimizing impacts. Additional mobility benefits include the use of high-capacity transit buses, wider pedestrian spaces with buffer zones, shared use pathways and an overall safer roadway design. The impacts considered for the Project include minimizing additional ROW needs, maintaining acceptable traffic conditions, preserving existing trees, avoiding conflicts with major utilities, utilizing existing bridge structures with minimal modifications and reducing the amount of additional impervious area within the ROW to minimize drainage capacity issues along the corridor.

Existing and projected traffic conditions were determined through traffic modeling while the roadway and BRT lane configurations were designed with input from the traffic analysis while also considering ROW limitations, locations of existing trees and major utility facilities, existing bridge sections and the results of the drainage analyses. The traffic modeling and design efforts were performed in parallel with continuous coordination to ensure that the designed lane configurations were adequately represented in the modeled lane configurations. At certain major intersections within COH ROW with poor LOS, several mitigation scenarios were analyzed to improve the LOS while also tracking the associated ROW impacts. These scenarios were discussed with COH and are included as Appendix I for reference.

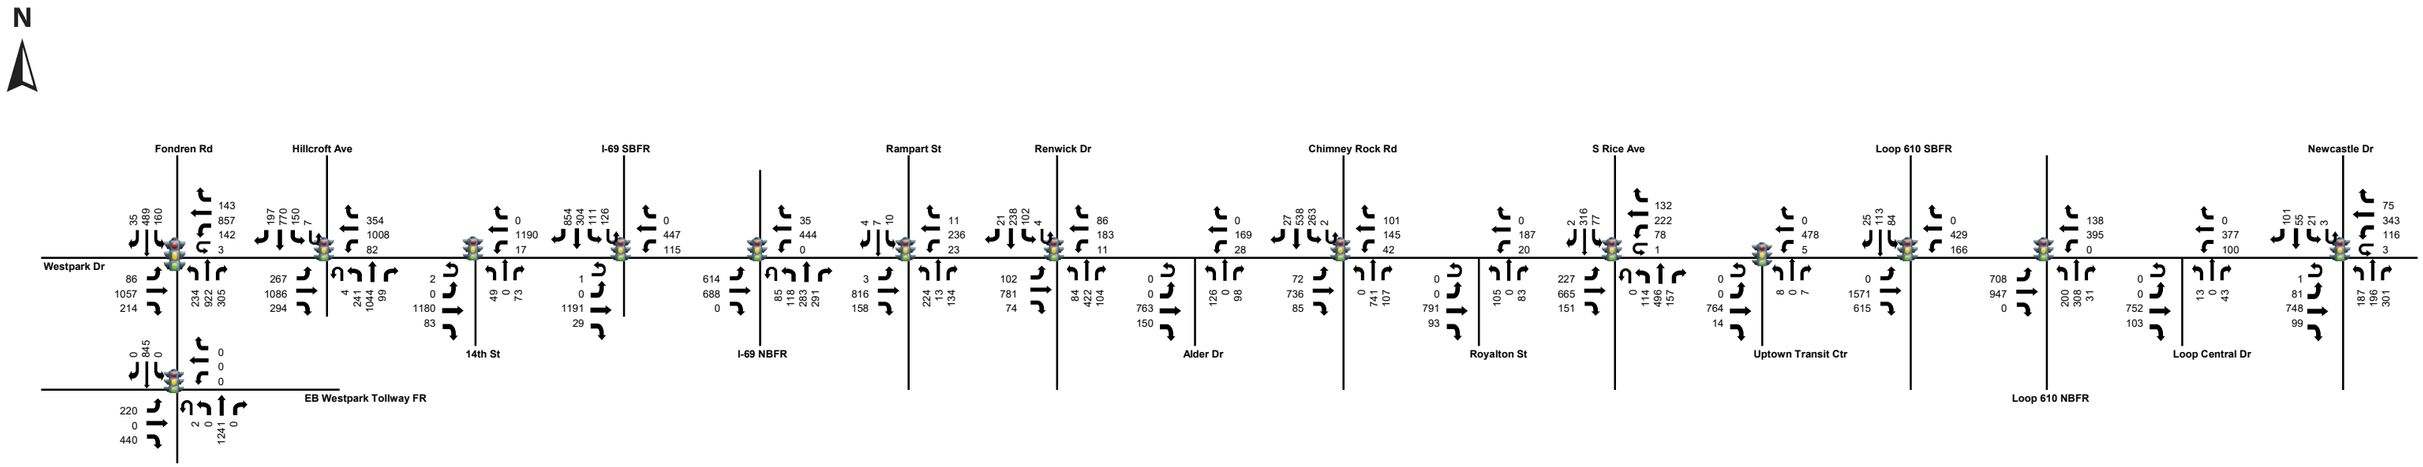
Traffic modeling was performed for the existing conditions, the future year (2030) No-Build conditions, and the future year (2030) Build conditions. TransModeler software was selected to develop the traffic models for the Existing, 2030 No-Build, and 2030 Build conditions. This software was chosen over other traffic modeling tools based on the public transit features which are built into the software including the simulation of BRT operations, exclusive bus lanes, traffic signal priority, and queue jumping. Many of these features are not included in other software packages that were considered for use on this Project.

3.1 Existing Traffic Conditions

The existing conditions throughout the study area were documented and used to construct the existing conditions traffic models. These models were then used as the basis for the future year No-Build and Build conditions models. This section of the report details those actions that were taken during the analysis to fully document the existing conditions.

3.1.1 Existing Traffic Volumes

Traffic data were collected along the corridor in September of 2021, with additional supplemental counts being taken in February and March of 2022. Counts were taken during the AM and PM peak hours under typical weekday traffic. AM peak traffic counts were collected between 7:00 AM and 9:00 AM and PM peak traffic counts were collected between 4:00 PM and 6:00 PM.



Existing condition traffic volumes were developed for both the AM and PM peak hours based on corridor wide peaks in each segment. Volumes between intersections were balanced and adjusted as necessary based on land uses and the presence of traffic source/sinks between traffic signals.

The AM and PM peak hour traffic volumes for each segment were based on the peak hour of traffic for each segment as indicated in **Table 2**.

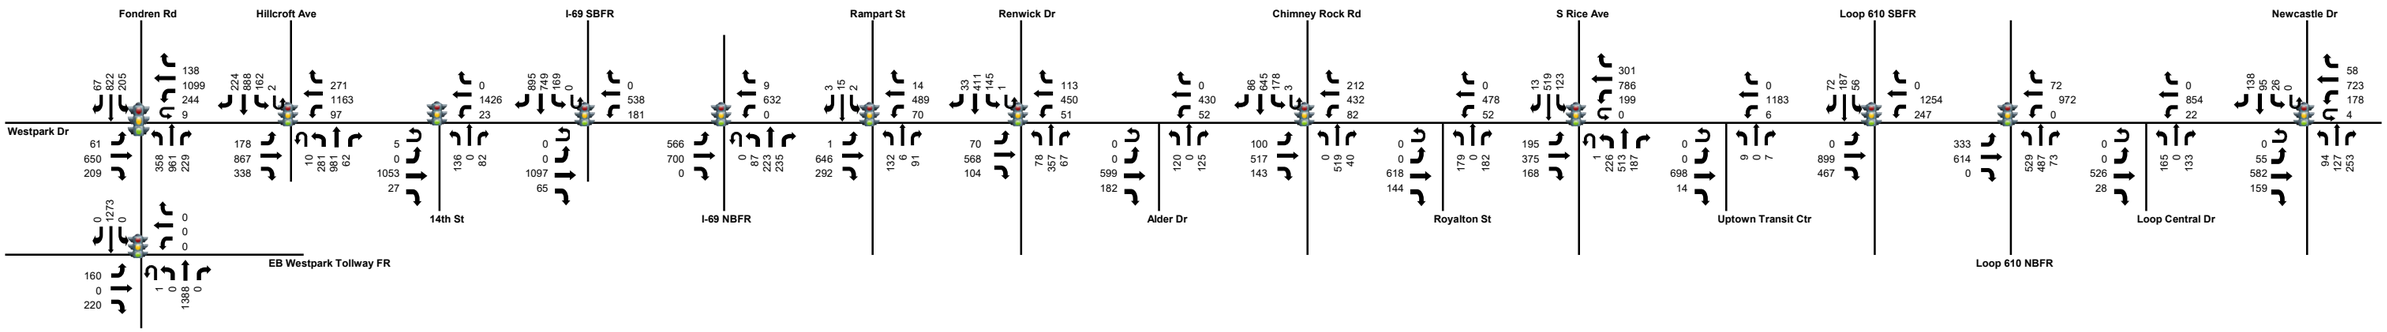


Table 2: University Corridor Peak Hours by Segment

SEGMENT	AM PEAK HOUR	PM PEAK HOUR
1	7:30 AM to 8:30 AM	4:00 PM to 5:00 PM
2	7:45 AM to 8:45 AM	4:15 PM to 5:15 PM
3	7:45 AM to 8:45 AM	4:45 PM to 5:45 PM
4	7:15 AM to 8:15 AM	4:00 PM to 5:00 PM
5	7:15 AM to 8:15 AM	4:15 PM to 5:15 PM

Figures 2 through 11 show the existing AM and PM peak hour volumes at each of the intersections included in the study area. Origin-Destination (O-D) matrices were developed for the AM and PM peak scenarios from the regional Travel Demand Model from H-GAC. The O-D matrices were based on demographics and network inputs from the H-GAC official scenarios. The O-D matrices for the existing conditions were grown to 2030 No-Build and Build conditions and were used as inputs into the TransModeler models to load traffic demand onto the network. TransModeler software determined the actual vehicle paths between the origins and destinations for each scenario.

3.1.2 Field Observations

Field visits were performed by the Project team during the AM and PM peak hours to observe traffic operations, areas of congestion, and safety issues that occur along the proposed alignment and at study intersections. Travel time runs were performed in both directions along all segments of the study area. Video was collected along the proposed BRT route in the segments to document the travel times, areas of congestion, existing lane configurations and phasing at the signalized intersections.

3.1.3 Traffic Signal Operations

Timing plans for all signalized intersections included in the model were obtained from COH, who operates and maintains the signals along the University Corridor. The intersection phasing and timing plans for the AM and PM peak hours were included in both the existing conditions and the 2030 No-Build conditions traffic models.

3.2 Future Traffic Conditions

Growth rates for the future year traffic conditions were determined and used to develop future year traffic volume forecasts. This section details how these growth rates were developed.

3.2.1 Growth Rate

The METRO version of the H-GAC model demographic and network inputs from H-GAC's official scenarios were used to develop traffic growth rates in the Travel Demand Model. The official H-GAC scenario transit network includes all METRONext projects and highway networks included in the regional long range transportation plan developed by H-GAC. Considering that H-GAC's latest model validation base year is 2016, a conformity base year of 2020 and conformity forecast year of 2030 were used. ATG reviewed the H-GAC official 2045 model network and confirmed that the METRONext Moving Forward Plan was already included in the network. Additional review of the H-GAC network confirmed that the 2020 transit network is consistent with the Inner Katy Project team's assumption on the 2027 and 2045 No-Build transit network, a transit project planned to begin before the University Line Project. Therefore, the same set of assumptions are used to define the No-Build transit network as the Inner Katy Project.

Three scenarios were run: 2020, 2045 No-Build and 2045 Build. The difference between 2045 No-Build and 2045 Build is the exclusion of the University Line in the 2045 No-Build Scenario. **Table 3** lists the planned transit and highway projects included in the model that were used to run the 2020, 2045 No-Build, and 2045 Build scenarios.

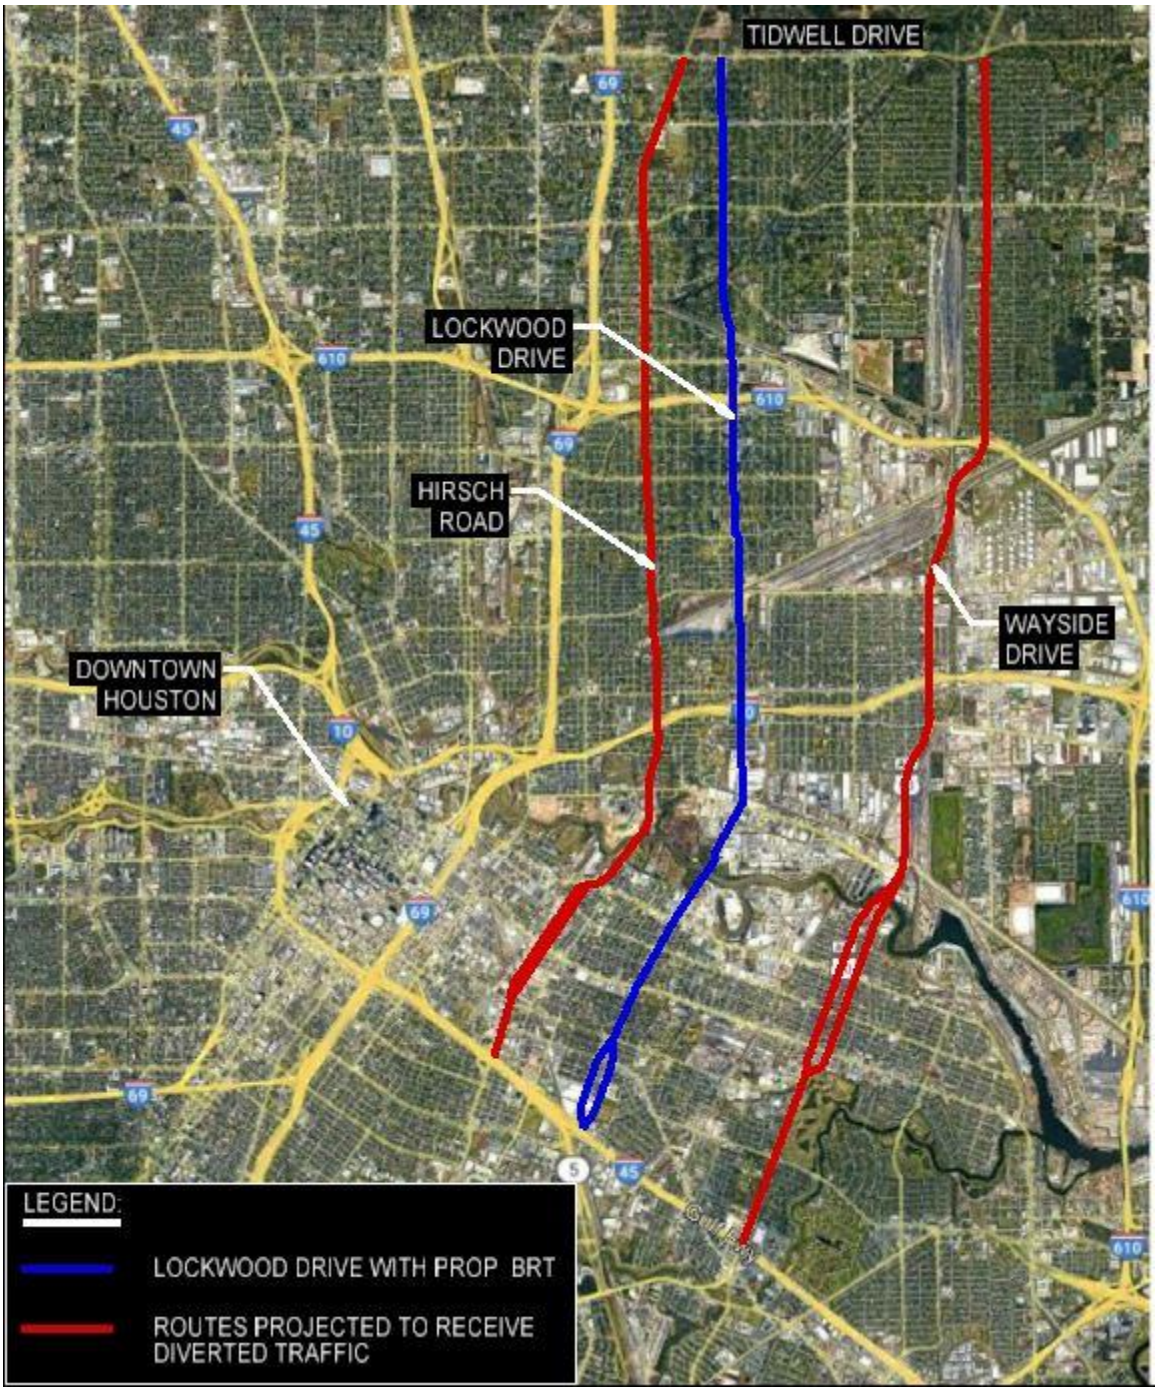
NHHIP: North Houston Highway Improvement Project
Source: H-GAC Regional Transportation Plan Model

From the 2020 and 2045 model results, growth rates were estimated for each segment of the corridor. The analysis indicated the westernmost region of the corridor experiences the highest growth rates and the northernmost region experienced the lowest growth rates. The recommended annual growth rates and applied growth factors for vehicular traffic in each segment are shown in

Table 4. The growth rates for the Build conditions were lower than for the No-Build conditions to account for modal shift of trips from vehicular traffic to the proposed BRT Project.

Table 4: Recommended Growth Rates and Growth Factors for University Line Traffic Projections

Segment	Annual Growth Rates (No-Build)	Growth Factors (No-Build)	Annual Growth Rates (Build)	Growth Factors (Build)
	2021 to 2040	2021 to 2030	2021 to 2040	2021 to 2030
1	1.9%	1.17	1.8%	1.16
2	1.1%	1.10	1.0%	1.09
3	0.9%	1.08	0.8%	1.07
4	0.9%	1.08	0.8%	1.07
5	0.4%	1.04	0.3%	1.03



Due to the nature of the proposed improvements, it was anticipated that some of the traffic currently on the roadways with the proposed BRT would divert their route due to the nature of the improvements (removing one general purpose lane). The 2045 H-GAC model was used to evaluate the change in volume-to-capacity (v/c) ratios for alternative routes in both the AM and PM peak hours for both Richmond Avenue in Segment 2 and Lockwood Drive in Segments 4 and 5. A v/c ratio is a comparison of the traffic volume on a roadway to the amount of traffic that the roadway is able to carry in peak hours. A low v/c ratio indicates low levels of congestion and a v/c ratio over 1.0 indicates that the traffic demand on the roadway exceeds the capacity to carry that traffic. As the BRT in Segment 1 operates mostly outside of COH ROW and the traffic volumes in Segment 3 are relatively low when compared to other Segments, alternative routes were not evaluated in these segments.

The results of the analysis indicated that there are currently no parallel routes with excess capacity in Segment 2. Therefore, no reductions in traffic demand were made to the proposed Build volumes on Richmond Avenue. However, there are two parallel routes with excess capacity for Lockwood Drive between IH-45 and Tidwell Road including Hirsch Road and Wayside Street. **Table 5** shows the average v/c ratios that were calculated on Lockwood Drive, Hirsch Road, and Wayside Street both with and without the proposed BRT Project in place. As noted in the table There is projected to be excess capacity on both Hirsch Road and Wayside Street between IH-45 and Tidwell. The v/c ratios on these streets are low enough to handle the diverted traffic and the results of the H-GAC model runs indicate that with the proposed University Line BRT in place traffic would divert to these alternative routes as the v/c ratios on these streets are projected to increase. **Figure 12** shows Lockwood Drive in Purple and Hirsch Road and Wayside Street in Red.

Table 5: Lockwood Drive and Parallel Routes Projected v/c Ratios

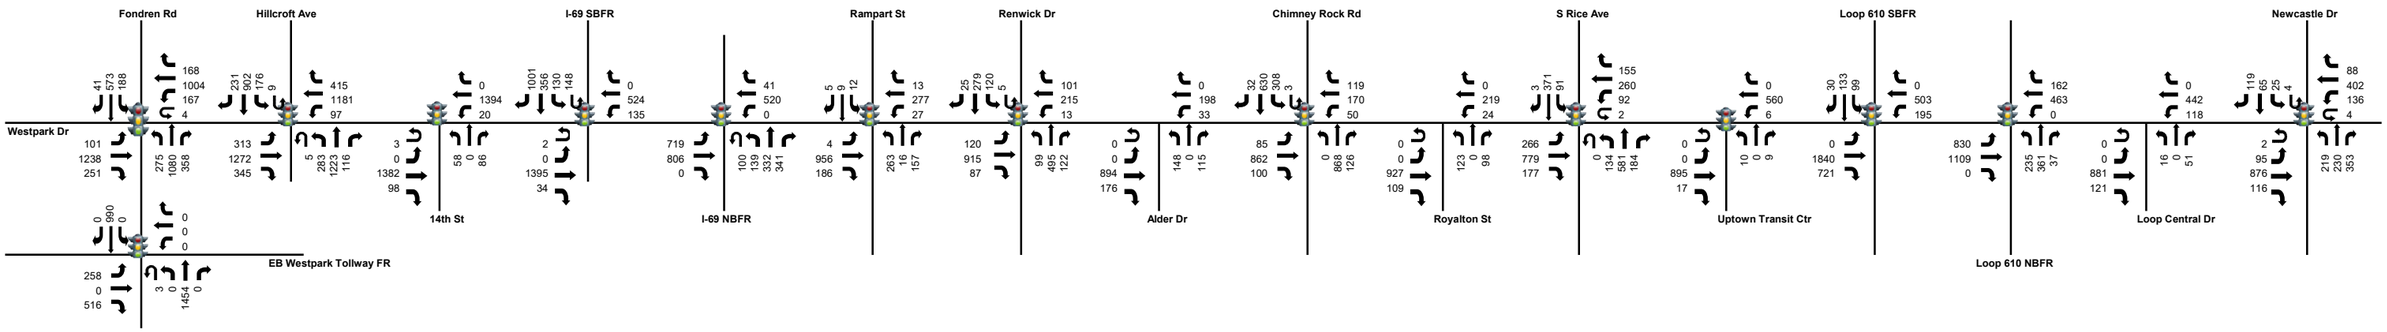
Figure 12: Lockwood Drive and Parallel Routes



Source: Google Earth

The regional travel demand model shows that once the proposed University Line BRT Project has been constructed some of the traffic currently on Lockwood Drive will transition to Hirsch Road and Wayside Street. Since Hirsch Road is located on average two-thirds of a mile to the west of Lockwood Drive and Wayside Street is located on average two miles to the east of Lockwood Drive, a majority of the diverted traffic will route to Hirsch Road. The v/c ratios on Hirsch Road are projected to increase an average of about one-half percent in the AM peak and about 5 percent in the PM peak. The v/c ratios on Wayside Street are projected to increase about one-half percent for both the AM and PM peaks.

Based on the results of the travel demand modeling, it was assumed that 10 percent of the through traffic on Lockwood Drive would divert to parallel routes due to the reduction in capacity on this corridor. Therefore, in Segments 4 and 5, the through volumes on Lockwood Drive were reduced by 10 percent from what was calculated by the growth rates.

Figures 13 through 22 show the projected traffic volumes that were used for the 2030 No-Build conditions traffic analysis. **Figures 23 through 32** show the projected traffic volumes which were used for the 2030 Build conditions traffic analysis.

3.2.2 Proposed Traffic Signal Operations

Adjustments were made to the traffic signal timing and phasing for the Build conditions models, as necessary, based on the design of the proposed BRT. **Appendix H** contains the proposed signal timing reports for the build conditions. The changes made to the traffic signal timing and phasing in the proposed models are as follows:

- In Segment 1, between Fondren Road and the IH-610 interchange, the BRT is proposed to operate in a separate guideway which will run on the south side of Westpark Drive. The proposed traffic models include preemption of the traffic signals to ensure there are no conflicts between BRT and general-purpose traffic at the signalized intersections in this area. Sensors will detect when a bus approaches the intersection and will transfer the signalized intersections into preemption mode. The first phase of preemption will clear any traffic queues across the cross street and then will move to the second phase which will prohibit movements across the BRT guideway until the BRT vehicle has cleared the intersection. **Figure 33** shows a high level overview of how the traffic signal pre-emption will operate.

Figure 33: Segment 1 Signal Pre-Emption Concept

- Cycle lengths which are currently running at the intersections within the study area were kept for the proposed 2030 Build Conditions Models except where BRT phases were added to the intersection or interchange. The current signal coordination patterns were also maintained. Intersection splits and offsets were optimized for the proposed build conditions.
- The existing permitted or permitted/protected left turn movements were adjusted to protected only for those left turns from the street on which the proposed BRT will run in the center. This will ensure there are no uncontrolled movements across the BRT guideway.
- For the intersections where the BRT is center running, the BRT will operate concurrently with the adjacent through movements of the general-purpose lanes when the BRT vehicle travels straight through the intersection. TSP was included in the models for the BRT vehicles to extend the green phase for the through movements up to 10 seconds as they approach the intersection based on sensors included in the models. Following a green time extension, the intersection will transition back to the appropriate cycle length and offset to maintain coordination along the corridor.

- Where the proposed BRT vehicle turns from one street to another from the center running BRT guideway, an exclusive BRT phase was provided at the intersection. This exclusive phase will be necessary as the proposed BRT will be crossing other traffic streams during its movement at these intersections.
- BRT headways were assumed to be 6 minutes between BRT vehicles.

Table 6 compares the existing signal phasing to the proposed signal phasing for each intersection within the study area.

Table 6: Signal Phasing Comparison

Intersection	Existing Phasing	Proposed Phasing
101 – EB Westpark Exit Ramp at Fondren Road	Protected Left Turns – EB Running on Same Controller as 102	Protected Left Turns – EB Running on Same Controller as 102 Preemptive Clearance & BRT Phase Added

3.3 Measures of Effectiveness (MOEs)

MOEs were used for a comparison of the Build scenario to the baseline No-Build scenario. As defined in the Highway Capacity Manual, 7th Edition (Transportation Research Board, 2022) LOS is a quantitative stratification of a performance measure or measures representing quality of service. For signalized intersections throughout the study area, LOS was used as the primary measure for comparing scenarios and alternatives. Signalized intersection LOS is based on average control delay (expressed in seconds per vehicle), which is the delay that is incurred when a traffic control device causes a vehicle to slow or stop. The LOS for each intersection is also a measure of how much congestion occurs at an intersection during a peak hour period. For signalized intersections, the LOS was aggregated by approach and also calculated for the overall intersection. The amount of delay at the intersection was calculated based on the microsimulation results from TransModeler. The LOS for the intersections were estimated based on the LOS criteria listed in the Highway Capacity Manual, 7th Edition (Transportation Research Board, 7th Edition) which are shown in **Table 7**.

Table 7: LOS Criteria for Intersections

Level of Service (LOS)	Signalized Intersection Average Control Delay Range (sec/veh)	Un-signalized Intersection Average Control Delay Range (sec/veh)
A	0 - 10	0 – 10
B	10 – 20	10 – 15
C	20 – 35	15 – 25
D	35 – 55	25 – 35
E	55 – 80	35 – 50
F	80+	50+

Source: Highway Capacity Manual, 7th Edition (Transportation Research Board, 2022)

To establish the traffic impacts of the proposed BRT Project, the LOS calculated by the No-Build and the Build traffic models were compared for each signalized intersection within the study area. The impacts at each of the intersections within the study area are documented in this report.

3.4 Coordination with Relevant Agencies

As this project will provide for a paradigm shift in the use of the roadways to a more multi-modal approach, the amount of people throughput in each segment with the proposed BRT in place was calculated and compared to the existing people throughput under the existing configuration. The existing and proposed throughputs at key locations along the corridor were compared and shared with the COH early on in the coordination process.

Ongoing coordination with COH has been occurring as the traffic modeling and design has progressed to inform and receive feedback to the proposed changes on city streets and to discuss mitigation scenarios. Representatives from METRO and their consultant team prepared for and

participated in a number of traffic-focused meetings and discussions with staff from COH as outlined below:

- September 26, 2022: METRO team outlined the methodology and assumptions that were used for the detailed traffic analysis including the traffic data collected, how the future traffic volumes were projected, why TransModeler was used for the proposed analysis, the calibration of the existing conditions models, and what adjustments are proposed to the signal phasing within the proposed BRT alignment. Traffic modeling results from TransModeler for Segment 1 were presented in tabular and graphic forms to COH.

- October 10, 2022: METRO team presented traffic modeling results from TransModeler for Segment 2 in tabular and graphic forms to COH.

- October 12, 2022: Following the previous meeting, COH asked for a different approach in reviewing the impacts to traffic operations, which included showing the mitigation scenarios explored at each intersection, comparing the mitigations based upon LOS, V/C ratio, drainage and ROW impacts, and recommending the mitigation to be implemented. The focus of this analysis would be those intersections with LOS E or F only. [NOTE: To expedite this process, Synchro software was used to model the mitigation scenarios. Once a scenario was selected, it would be included in the TransModeler model, if it was not already in it.]

- November 4, 2022: In order to confirm that the information prepared met COH request, METRO team presented the mitigation scenarios for the Richmond/Montrose intersection in Segment 2 and the resulting impacts. Overall, COH was agreeable to the format and information presented.

- January 9, 2023: METRO team presented Segment 2 intersections along Richmond Avenue, including Edloe, Buffalo Speedway, Eastside, Kirby, and Montrose and a couple of intersections along Westpark at Weslayan and Edloe.

- January 18, 2023: METRO team presented recommended scenarios for the Segment 2 intersections previously discussed during meeting on January 9, 2023 and the mitigation scenarios analyzed at the Tidwell/Jensen intersection in Segment 5.

- February 13, 2023: METRO team presented Segment 4 intersections along Lockwood Drive, including McKinney, Harrisburg, Canal, Navigation, Marron Park Way and Harvey Wilson, and compared the impacts of having 2-general purpose lanes vs. 1-general purpose lane in each direction.

- February 20, 2023: METRO team presented projected queue lengths to COH at the various TxDOT intersections along the University Corridor in preparation for a future meeting with TxDOT. The intent of the meeting was to determine any impacts to existing TxDOT facilities caused by projected traffic delays.

- February 27, 2023: METRO discussed throughput analysis at the Richmond/Spur 527 intersection with COH.

As all of the signals along the University Corridor are operated and maintained by COH, traffic impact coordination has primarily been with COH. The majority of coordination meetings with TxDOT Houston District during project development has related to future projects interfacing with the University Corridor. However, traffic impact discussions recently began as the traffic model has gone through multiple refinements during project development to optimize the signals along the alignment, including at crossings with TxDOT facilities, and to address comments and concerns from COH. The traffic-focused meeting and discussion with TxDOT staff is outlined below:

- April 4, 2023: METRO team presented the latest overall corridor alignment, identified the BRT crossings of TxDOT facilities, provided queue length impacts in tabular and graphic forms and showed exhibits of the proposed lane configurations at each location. The intent of the meeting was to provide the latest lane configuration information to TxDOT and to demonstrate that the projected traffic queues would not back up onto the existing freeway sections. At the conclusion of the meeting, TxDOT requested some additional information to be presented.
- May 23, 2023: In response to TxDOT's request, METRO team presented additional queue length information in tabular and graphic formats and provided additional exhibits of the existing and proposed lane configurations at each TxDOT crossing.

It is anticipated that additional traffic coordination meetings with COH and TxDOT will continue as the design progresses.

3.5 Traffic Modeling

TransModeler software was selected to develop the traffic models for the existing, 2030 No-Build, and 2030 Build conditions. This software was chosen over other traffic modeling tools based on the public transit features that are built into the software. The features include the ability to model exclusive bus guideways, TSP, and queue-jumping, all of which were employed as part of the BRT Project. This software also provided the ability to calculate MOEs for both the overall network and individual intersections, approaches, and movements. Further details concerning this software are included in a White Paper, dated March 30, 2021, discussing the selection of TransModeler in **Appendix G**. For all scenarios, the AM and the PM peak models were run 10 separate times with different random seed inputs. The results shown within this report and in the appendices are the averages of the 10 separate runs.

4 Existing Traffic Conditions

Traffic models were prepared for the existing conditions which were used as the basis of the future year traffic modeling. The existing roadway geometry, traffic volumes, and traffic signal timings were used to develop the existing conditions models for both the AM and PM peak hours. These models were then calibrated against measurements taken in the field to ensure they were an accurate representation of the existing conditions within the study area along the proposed alignment of the BRT. All signalized intersections along the proposed BRT route were included in the models.

4.1 Roadway Geometry

The existing roadway geometry was obtained through a review of aerial photographs and field visits to each of the intersections included in the proposed study area (alignment of the proposed BRT). At each intersection, the geometry was determined for each approach to the intersection including:

- Number of Through Lanes
- Presence and Length of Exclusive Left or Right Turn Lanes
- Presence of Shared Lanes (e.g. Thru / Right Turn Lane)
- Presence of Pedestrian Crosswalks
- Presence of On-Street Parking
- Any other considerations affecting operations of the traffic signals

Geometry was input into the TransModeler at each of the study intersections.

4.1.1 Segment 1

Segment 1 is between the Westchase Park & Ride partially within METRO ROW and partially within COH ROW along Westpark Drive to the UPRR crossing between Newcastle Drive and Weslayan Street. To the west of Fondren Road, the proposed BRT will be on a grade separated guideway, therefore no intersections were studied in this area since they would not be impacted by the proposed BRT operations. The existing and 2030 No-Build conditions models (AM & PM) contain the following intersections:

- 101 – Westpark Tollway Exit Ramp at Fondren Road
- 102 – Westpark Drive at Fondren Road
- 103 – Westpark Drive at Hillcroft Avenue
- 104 – Westpark Drive at 14th Street
- 105 – Westpark Drive at IH-69 SB Frontage Road
- 106 – Westpark Drive at IH-69 NB Frontage Road
- 107 – Westpark Drive at Rampart Street
- 108 – Westpark Drive at Renwick Drive
- 99558 – Westpark Drive at Alder Drive (Currently Unsignalized)
- 109 – Westpark Drive at Chimney Rock Road
- 309 – Westpark Drive at Royalton Street (Currently Unsignalized)
- 110 – Westpark Drive at S Rice Avenue
- 99553 – Westpark Drive at Uptown Transit Center

- 111 – Westpark Drive at IH-610 SB Frontage Road
- 112 – Westpark Drive at IH-610 NB Frontage Road
- 99561 – Westpark Drive at Loop Central Drive (Currently Unsignalized)
- 113 – Westpark Drive at Newcastle Drive

4.1.2 Segment 2

Segment 2 runs along Westpark Drive from the end of Segment 1 to Edloe Street where it travels to the north to Richmond Avenue and then runs along Richmond Avenue to the intersection of Richmond Avenue/Wheeler Avenue and Main Street. The existing and 2030 No-Build conditions models (AM & PM) contain the following intersections:

- 114 – Westpark Drive at Weslayan Street
- 115 – Westpark Drive at Edloe Street
- 116 – IH-69 Express Lanes at Edloe Street
- 118 – Richmond Avenue at Edloe Street
- 119 – Richmond Avenue at Buffalo Speedway
- 120 – Richmond Avenue at Eastside Street
- 121 – Richmond Avenue at Kirby Drive
- 122 – Richmond Avenue at Greenbriar Street
- 123 – Richmond Avenue at Shepherd Drive
- 124 – Richmond Avenue at Hazard Street
- 125 – Richmond Avenue at Woodhead Street
- 126 – Richmond Avenue at Dunlavy Street
- 127 – Richmond Avenue at Mandell Street
- 128 – Richmond Avenue at Montrose Boulevard
- 129 – Richmond Avenue at Spur 527 SB Frontage Road
- 130 – Richmond Avenue at Spur 527 NB Frontage Road

4.1.3 Segment 3

Segment 3 begins at the intersection of Wheeler Avenue and Main Street and then runs along Wheeler Avenue to the intersection with Ennis Street. The alignment then runs along Ennis Street to the intersection with Elgin Street and continues along Elgin Street to the intersection of Elgin Street/Lockwood Drive with the IH-45 NB Frontage Road Intersection. The existing and 2030 No-Build conditions models (AM & PM) contain the following intersections:

- 131 – Richmond Avenue/Wheeler Avenue at Main Street
- 132 – Wheeler Avenue at Fannin Street
- 133 – Wheeler Avenue at San Jacinto Street
- 134 – Wheeler Avenue at La Branch Street
- 135 – Wheeler Avenue at Almeda Road
- 365 – Wheeler Avenue at St Emanuel Street (Currently Unsignalized)
- 367 – Wheeler Avenue at Hutchins Street (Currently Unsignalized)
- 136 – Wheeler Avenue at Emancipation Avenue
- 266 – Wheeler Avenue at Ennis Street
- 292 – Ennis Street at Cleburne Street

- 141 – Ennis Street at Alabama Street
- 306 – Ennis Street at Holman Street
- 249 – Ennis Street at Elgin Street
- 143 – Elgin Street at Scott Street
- 144 – Elgin Street at Cullen Boulevard
- 145 – Elgin Street at UH Entrance 16
- 146 – Elgin Street at Spur 5 SB Frontage Road
- 147 – Elgin Street at Spur 5 NB Frontage Road
- 148 – IH-45 NB Frontage Road at S Lockwood Drive/Ernestine Street

4.1.4 Segment 4

Segment 4 begins at the intersection of S Lockwood Drive/Ernestine Street and the IH-45 NB Frontage Road and runs north along Lockwood Drive to the south of the interchange of Lockwood Drive with the IH-10 EB and WB frontage roads. Between the intersection with the IH-45 NB Frontage Road and Polk Street, Lockwood Drive is part of a one-way pair serving NB traffic. SB traffic in this area is served by Ernestine Street. At the northern end of Segment 4, Lockwood Drive has a wide median (approx. 120'). Therefore, separate intersections were established for the intersections of the cross streets with the NB and SB lanes of Lockwood Drive. The existing and 2030 No-Build conditions models (AM & PM) contain the following intersections:

- 452 – Ernestine Street at Munger Street (Currently Unsignalized)
- 453 – Lockwood Drive at Munger Street (Currently Unsignalized)
- 149 – Ernestine Street at Leeland Street
- 150 – Lockwood Drive at Leeland Street
- 151 – Ernestine Street/Lockwood Drive at Polk Street
- 152 – Lockwood Drive at McKinney Street
- 153 – Lockwood Drive at Harrisburg Boulevard
- 154 – Lockwood Drive at Canal Street
- 155 – Lockwood Drive at Navigation Boulevard
- 156 – Lockwood Drive at Armour Drive
- 514 – Lockwood Drive at Harvey Wilson Drive (Currently Unsignalized)
- 157 – Lockwood Drive at Clinton Drive

4.1.5 Segment 5

Segment 5 begins south of the interchange of Lockwood Drive and the IH-10 frontage roads. It runs along Lockwood Drive all the way to the intersection with Tidwell Road and continues west of Lockwood Drive on Tidwell Road to the intersection with Jensen Drive. The route then runs along Jensen Drive to Turner Drive where the buses will access the Tidwell Transit Center. The existing and 2030 No-Build conditions models (AM & PM) contain the following intersections:

- 158 – Lockwood Drive (SB) at Market Street
- 159 – Lockwood Drive (NB) at Market Street
- 160 – Lockwood Drive (SB) at IH-10 EB Frontage Road
- 161 – Lockwood Drive (NB) at IH-10 EB Frontage Road
- 162 – Lockwood Drive (SB) at IH-10 WB Frontage Road

- 163 – Lockwood Drive (NB) at IH-10 WB Frontage Road
- 164 – Lockwood Drive (SB) at Lyons Avenue
- 165 – Lockwood Drive (NB) at Lyons Avenue
- 534 – Lockwood Drive at Hershe Street (Currently Unsignalized)
- 166 – Lockwood Drive at Mulvey Street
- 567 – Lockwood Drive at Nichols Street (Currently Unsignalized)
- 576 – Lockwood Drive at Sudan Street (Currently Unsignalized)
- 167 – Lockwood Drive at Collingsworth Street
- 168 – Lockwood Drive at Crane Street
- 169 – Lockwood Drive at Cavalcade Street
- 170 – Lockwood Drive at Rand Street
- 604 – Lockwood Drive at Pardee Street (Currently Unsignalized)
- 171 – Lockwood Drive at IH-610 EB Frontage Road
- 172 – Lockwood Drive at IH-610 WB Frontage Road
- 173 – Lockwood Drive at Kelley Street
- 174 – Lockwood Drive at Shreveport Boulevard
- 175 – Lockwood Drive at Bennington Street
- 623 – Lockwood Drive at Denmark Street (Currently Unsignalized)
- 176 – Lockwood Drive at Crosstimbers Street
- 177 – Lockwood Drive at Weaver Road
- 641 – Lockwood Drive at Keeland Street (Currently Unsignalized)
- 178 – Lockwood Drive at Laura Koppe Road
- 659 – Lockwood Drive at Firnat Street (Currently Unsignalized)
- 179 – Lockwood Drive at Tidwell Road
- 180 – Tidwell Road at Hirsch Road
- 677 – Tidwell Road at Friendly Street
- 181 – Tidwell Road at IH-69 NB Frontage Road
- 182 – Tidwell Road at IH-69 SB Frontage Road
- 689 – Tidwell Road at Edell Street
- 183 – Tidwell Road at Jensen Drive
- 705 – Jensen Drive at Turner Drive
- 690 – Epsom Road/Edell Street at Turner Drive

4.2 Traffic Counts

Initial traffic counts were collected on Wednesday, September 1, 2021 and Thursday, September 9, 2021. Due to changes in the proposed alignment and design of the University Line BRT Project, supplemental counts were conducted on Tuesday March 8, 2022, Thursday March 24, 2022 and Tuesday April 19, 2022. Turning Movement Counts (TMCs) were collected at all intersections for 4 hours (7 AM – 9 AM, 4 PM – 6 PM) to capture both the AM and PM peak hours. AM and PM peak hours were determined for each segment and are shown in **Table 8**.

Table 8: Peak Hours by Segment

Segment	AM Peak Hour	PM Peak Hour
1	7:30 – 8:30 AM	4:00 – 5:00 PM
2	7:45 – 8:45 AM	4:15 – 5:15 PM
3	7:45 – 8:45 AM	4:45 – 5:45 PM
4	7:15 – 8:15 AM	4:00 – 5:00 PM
5	7:15 – 8:15 AM	4:15 – 5:15 PM

Traffic counts were balanced between intersections adjusting for mid-block sources and sinks for traffic. Existing condition traffic volumes for each intersection are previously shown in **Figures 2 through 11.**

4.3 Traffic Signal Timings

Intersection phasing and timing plans for the AM and PM peak hours were obtained from COH for each intersection included in the study area (proposed alignment of the BRT line). The traffic signal phasing at each intersection was coded into the traffic models, and the separate timing plans including the cycle length, intersection splits, and intersection offsets were coded into the AM and PM peak hour models. In addition to the vehicular phase timings, the pedestrian crossing timings (walk and ped clearance) were also entered into the traffic models. For the build conditions models the pedestrian timings which are existing in the field were verified to be adequate for pedestrians to cross to the center platforms. Pedestrian timings developed by COH are based on minimum walk times of 7 seconds and ped clearance times based on 3.5 feet per second walking speed.

5 Model Calibration

Model calibration is an important step to ensure that the models are returning realistic results which replicate actual conditions within the network. Calibration is conducted through a process. The first step is to evaluate the behavior of the model versus what was observed during field visits. Field visits were conducted to each segment during both the AM and PM peak hours in February of 2022 on normal weekdays. Travel time runs were conducted during the peak hours in both directions, and videos were collected to document the existing condition roadway geometry, intersection phasing, etc. and locations where traffic congestion was occurring within the proposed University Line BRT corridor.

Following the initial run of the completed traffic models, the output results were compared to the field collected data. As part of the second step, adjustments to operational parameters in the model were then made to ensure the Measures of Effectiveness (MOEs) output from the models fell within the calibration targets listed in **Table 9**.

Table 9: Traffic Model Calibration Targets

Measures of Effectiveness	Calibration Acceptance Targets
Individual Link Flows:	
< 700 vehicles per hour	Within 100 veh/hr of Field Counts
700 to 2,700 vehicles per hour	Within 15% of Field Counts
> 2,700 vehicles per hour	Within 400 veh/hr of Field Counts
Segment Speeds	Within 10 mph of Field Data
Travel Times	Within 15% of Field Data
Queue / Bottleneck Locations	Visually acceptable per Field Observations

Calibration of Link Flows required for minimum of 85% of individual links within the network.
Source: FHWA Traffic Analysis Toolbox Volume III: Guidelines for Applying Traffic Microsimulation Modeling Software

Detailed calibration data for the existing conditions traffic models are included in **Appendix D**. A high-level summary of the calibration results for the traffic volumes is shown in **Table 10** below. Traffic volume calibration was checked for the existing and future No-Build traffic volumes to ensure that they were within the acceptable calibration limits. Both link volumes on approaches to intersections and individual turning movement volumes generated by the models were checked against those in **Figures 2 through 11,** based on the criteria listed in **Table 9**. For a model to be considered calibrated regarding traffic volumes, 85% of the links must have volumes which are within the calibration criteria listed in **Table 9**. In addition to the link volumes, the individual turning movement volumes at all intersections were also checked for calibration. Both the percentage of links and turning movements, which were within calibration limits for the existing and the No-Build volumes, are noted **in Table 10** below.

Table 10: Traffic Model Calibration – Volume Summary

Scenario	Links Calibrated	Turning Movements Calibrated
Existing Conditions – AM Peak	88.40%	95.62%
Existing Conditions – PM Peak	89.69%	96.99%
2030 No-Build Conditions – AM Peak	86.08%	94.42%
2030 No-Build Conditions – PM Peak	87.63%	94.43%

In addition to the traffic volumes which were present at each of the intersections, the travel times and vehicular speeds for each segment were checked. Existing condition travel time runs were conducted during a normal weekday in each of the segments. Initial travel time runs were conducted in February of 2022. Due to changes in the proposed alignment in Segment 3, a travel time run was performed in February of 2023 for this segment. From the travel time runs, average speeds were developed within each of the segments. The travel times and speeds were measured along the proposed route of the BRT in both directions during both the AM and the PM peak hours. **Tables 11 through 14** show the comparison of the travel times and speeds, which were computed by the traffic models in comparison with the speeds and travel times from the field. These checks were only performed for the existing conditions models since these are the only conditions for which travel time runs can be verified.

As indicated in **Tables 11 through 14**, the traffic volumes, average travel times, and vehicular speeds being used by the existing conditions and 2030 No-Build traffic models for both the AM and PM peaks produced results which adequately represent actual conditions. Therefore, these models were deemed representative tools to aid in the determination of the impacts of the proposed BRT Project and in the analysis of mitigation strategies that could be implemented to minimize those impacts.

6 Existing Conditions Traffic Analysis Results

This section describes the analysis of the 2021 existing conditions for both the AM and PM peak hours and includes the results of the TransModeler simulations for all analyzed intersections within the study area.

The purpose of the existing conditions traffic modeling was to provide an understanding of the existing condition traffic operations. The existing conditions models were also calibrated to match the exiting conditions observed in the field, as previously discussed, to ensure that the results obtained from the traffic models could provide a realistic estimation of traffic operations in the future for both the No-Build and Build conditions. The existing conditions traffic models were developed with the existing lane configurations, traffic signal timings, and traffic volumes (2021 volumes).

The results of the analysis for the AM and PM peak hours are shown and discussed in this section. A LOS of D or better is generally considered to be acceptable, while LOS of E or F are generally considered to be unacceptable. The tables showing the results of the traffic analysis throughout this report highlight approaches and intersections green for those operating at an acceptable LOS during peak hours and red for those operating at an unacceptable LOS.

6.1 Segment 1

Table 15 shows the results of the traffic models for the existing conditions at each of the intersections which are included in Segment 1. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

Table 15: Existing Conditions LOS Analysis Results – Segment 1

As shown in **Table 16**, there are multiple intersections within Segment 2 which are operating at LOS of E or F during the AM and/or PM peak hours. These intersections include the following:

- 119: Richmond Avenue at Buffalo Speedway
- 121: Richmond Avenue at Kirby Drive
- 124: Richmond Avenue at Hazard Street
- 126: Richmond Avenue at Dunlavy Street
- 128: Richmond Avenue at Montrose Boulevard
- 129: Richmond Avenue at US 59 / Spur 527 SB Frontage Road

6.3 Segment 3

Table 17 shows the results of the traffic models for the existing conditions at each of the analyzed intersections which are included in Segment 3. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

As shown in **Table 19**, all of the existing intersections within Segment 5 are operating at an acceptable Level of Service during the AM and PM peak hours.

7 Future Year (2030) No-Build Traffic Analysis Results

This section describes the analysis of the future year (2030) No-Build traffic analysis and includes the results of the TransModeler simulations for all analyzed intersections within the study area. For the vast majority of the University Corridor, these conditions were identical to the existing conditions other than the projected traffic volumes have been grown based on the growth factors shown in **Table 4**. There are a few intersections in Segments 3 and 4 that have slightly modified configurations to account for future modifications not included in the H-GAC regional model. These intersections will be briefly described in the appropriate segment section below. The future year No-Build conditions were studied to establish a baseline projection of how traffic within the study area would operate without the proposed BRT Project in the design year of 2030 for comparison to the 2030 Build conditions. The results of the analysis for the AM and PM peak hours are shown and discussed in this section for the 2030 No-Build conditions.

7.1 Segment 1

Table 20 shows the results of the traffic models for the future year 2030 No-Build conditions at each of the analyzed intersections which are included in Segment 1. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

		Overall	**E**	**62.4**	**D**	**39.9**

As shown in **Table 20**, there are multiple intersections within Segment 1 which are projected to operate at a LOS of E or F during the AM and/or PM peak hours of traffic. These include the following:

- 101 & 102: Fondren Road at Westpark Drive/Westpark Tollway Exit Ramp
- 103: Westpark Drive at Hillcroft Avenue
- 109: Westpark Drive at Chimney Rock Road
- 110: Westpark Drive at S Rice Avenue
- 111: Westpark Drive at IH-610 SB Frontage Road
- 112: Westpark Drive at IH-610 NB Frontage Road
- 113: Westpark Drive at Newcastle Drive

Some intersections, which are currently operating at an acceptable LOS, are projected to operate at an unacceptable LOS in 2030 No-Build conditions due to the projected traffic growth including the following:

- 109: Westpark Drive at Chimney Rock Road
- 113: Westpark Drive at Newcastle Drive

7.2 Segment 2

Table 21 shows the results of the traffic models for the 2030 No-Build conditions at each of the analyzed intersections which are included in Segment 2. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

		Overall	**D**	**42.3**	**C**	**22.4**

As shown in **Table 21**, there are multiple intersections within Segment 2 which are projected to operate at a LOS of E or F (generally considered to be unacceptable) during the AM and/or PM peak hours of traffic. These include the following:

- 114: Westpark Drive at Weslayan Street
- 119: Richmond Avenue at Buffalo Speedway
- 121: Richmond Avenue at Kirby Drive
- 124: Richmond Avenue at Hazard Street
- 126: Richmond Avenue at Dunlavy Street
- 127: Richmond Avenue at Mandell Street
- 128: Richmond Avenue at Montrose Boulevard
- 129: Richmond Avenue at US 59/Spur 527 SB Frontage Road

Some intersections, which are currently operating at an acceptable LOS, are projected to operate at an unacceptable LOS during the peak hours in 2030 No-Build condition due to the projected traffic growth:

- 114: Westpark Drive at Weslayan Street

7.3 Segment 3

Table 22 shows the results of the traffic models for the 2030 No-Build conditions at each of the analyzed intersections which are included in Segment 3. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

As shown in **Table 22**, there are a couple of intersections within Segment 3 which are projected to operate at a LOS of E or F during the AM and/or PM peak hours of traffic under the No-Build scenario. These include the following:

- 367: Wheeler Avenue at Hutchins Street
- 141: Ennis Street at Alabama Street

7.4 Segment 4

Table 23 shows the results of the traffic models for the 2030 No-Build conditions at each of the analyzed intersections which are included in Segment 4. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

* - Marron Park Way is a planned street by the Buffalo Bayou Partnership to serve future development in the area. Traffic information was obtained from a TIA prepared by Kimley Horn and dated June 2022.

All intersections within Segment 4 are projected to operate at an overall LOS of D or better during the peak hours under the 2030 No-Build conditions.

7.5 Segment 5

Table 24 shows the results of the traffic models for the 2030 No-Build conditions at each of the analyzed intersections which are included in Segment 5. The LOS is shown for the AM and PM peak hours of traffic and are summarized by both approach and overall intersection operations.

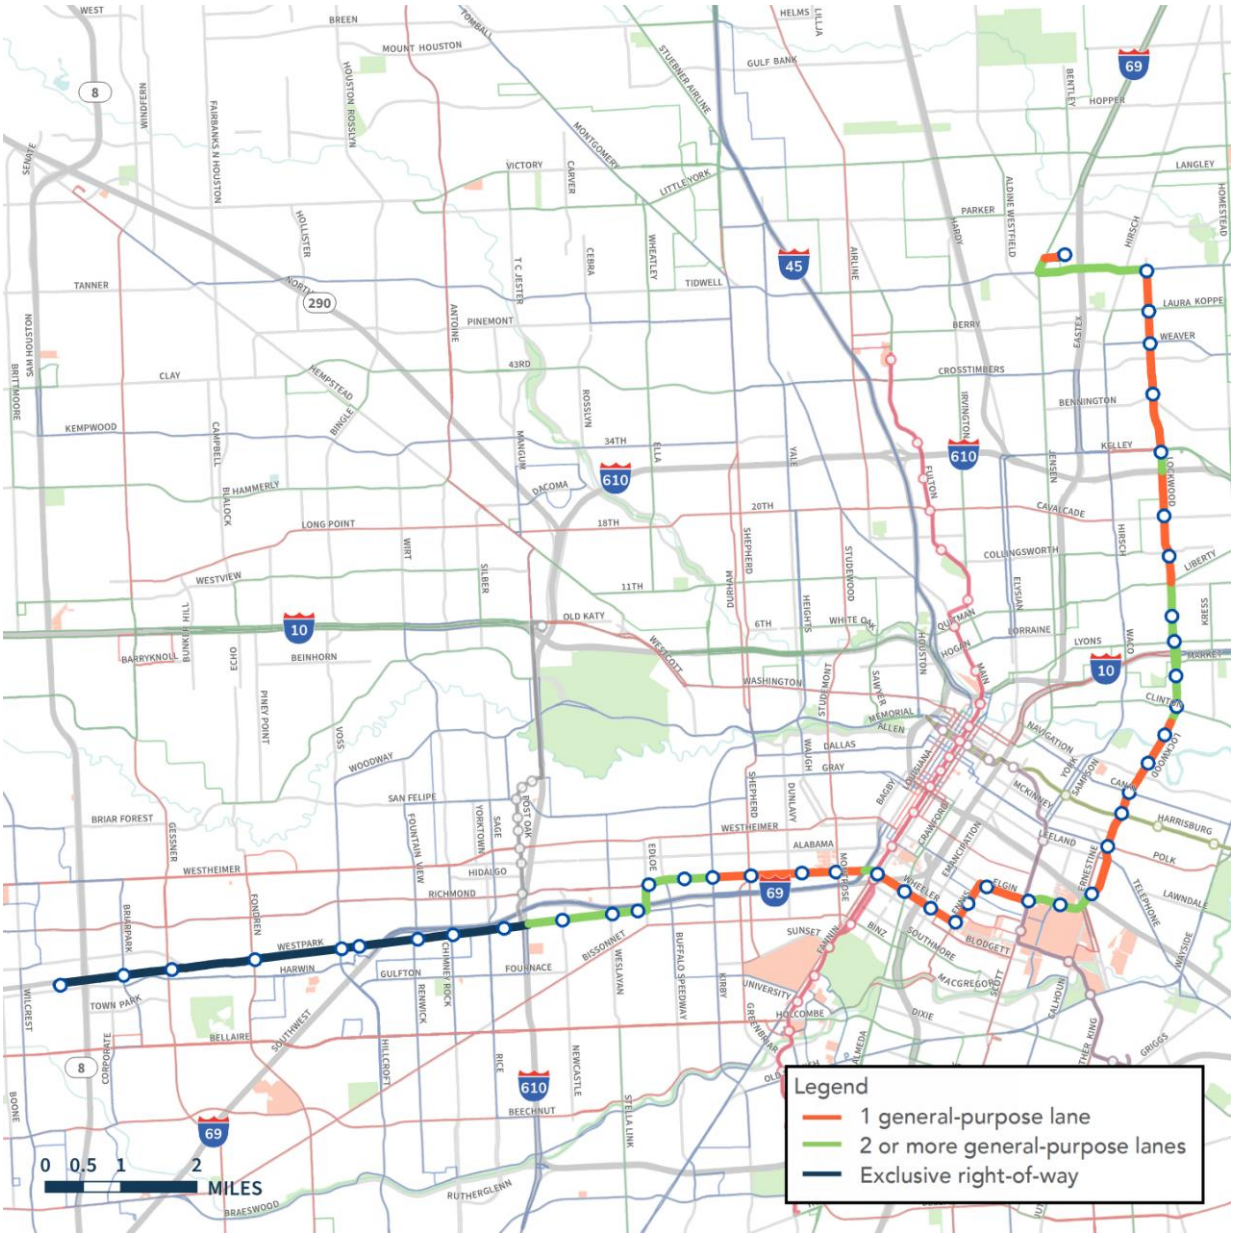
All intersections within Segment 5 are projected to operate at an overall LOS of D or better during the peak hours under the 2030 No-Build conditions.



8 Future Year (2030) Build Traffic Analysis Results

This section of the report outlines the results of the 2030 Build conditions analysis and compares the results to the 2030 No-Build conditions. The Build conditions are those which will be present after the proposed University Line BRT Project is constructed and is operating. In general, one of the existing general purpose lanes in each direction will be converted to a dedicated BRT lane throughout the majority of the corridor and with COH ROW. There are a few areas that will maintain the same number of general purpose lanes as existing and will be identified in the sections below. With the removal of a general purpose lane in each direction, it is anticipated that traffic capacity will be reduced with resulting impacts to traffic conditions as reflected in the LOS for each intersection. However, when these traffic impacts are considered in the context of the multi-modal approach of the Project, the desire to move a higher number of people through the corridor and the negative impacts to adjacent properties that would be required to bring the LOS to within acceptable limits, the traffic impacts are more justifiable.

This section of the report outlines the changes that are currently planned throughout the study area and will also provide the LOS results for the Build conditions to compare with the No-Build conditions. A summary of the changes within each segment are listed in the sub-sections below along with the model results.

Figure 34 shows a map of the proposed number of general-purpose lanes along the proposed route of the University Line BRT project.

Figure 34: Map of General-Purpose Lanes

8.1 Segment 1

The proposed BRT will operate in a separate guideway which will parallel Westpark Drive between the Westchase Park & Ride and the interchange of IH-610 where it will transition into a center running BRT guideway. To the west of Fondren Road, the proposed BRT guideway will be grade separated and will not interact with the existing traffic signals along Westpark Drive.

8.1.1 Segment 1 Geometric and Traffic Signal Adjustments

The following adjustments are proposed at each of the intersections within Segment 1 to be implemented as part of the University Line BRT Project. These improvements were included in the TransModeler models for the Build conditions.

- 101 & 102: Westpark Tollway Exit Ramp at Fondren Road, Westpark Drive and Fondren Road
    - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive. The existing exit ramp from Westpark Tollway will be shifted to the north but will retain the existing lane configuration.
    - The lane configurations on the remainder of approaches will remain in place following the construction of the University Line BRT Project.
    - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. The traffic signal will transition back to normal operations after bus travels through the intersection.

- 103: Westpark Drive at Hillcroft Avenue
    - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
    - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
    - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. The traffic signal will transition back to normal operations after bus travels through the intersection. Since there are near side stops at this intersection, the detector will be placed so that it will not change the signal for the BRT until after the vehicle has left the station.

- 104: Westpark Drive at 14th Street
    - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
    - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
    - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection. Since there are near side stops at this intersection, the detector will be placed so that it will not change the signal for the BRT until after the vehicle has left the station.

- 105 & 106: Westpark Drive at IH-69 SB Frontage Road and IH-69 NB Frontage Road
    - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.

- The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
- An exclusive BRT phase will be added to the interchange which would prohibit other movements at the interchange when the BRT vehicles operate through the interchange. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 107: Westpark Drive at Rampart Street
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 108: Westpark Drive at Renwick Drive/Fountain View Drive
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection. Since there are near side stops at this intersection, the detector will be placed so that it will not change the signal for the BRT until after the vehicle has left the station.

- 99558: Westpark Drive at Alder Drive
  - A traffic signal will be installed at this intersection.
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 109: Westpark Drive at Chimney Rock Road
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.

- Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection. Since there are near side stops at this intersection, the detector will be placed so that it will not change the signal for the BRT until after the vehicle has left the station.

- 309: Westpark Drive at Royalton Street
  - A traffic signal will be installed at this intersection.
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 110: Westpark Drive at S Rice Avenue
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 99553: Westpark Drive at Uptown Transit Center
  - The BRT guideway will be constructed within the existing METRO ROW to the south of Westpark Drive.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Pre-emption for the traffic signals will be implemented to prohibit traffic across the BRT guideway when the BRT buses are approaching and traveling through the intersection. Traffic signal will transition back to normal operations after bus travels through the intersection.

- 111 & 112: Westpark Drive at IH-610 SB and NB Frontage Roads
  - The general-purpose lane configurations on all approaches will remain in place following the construction of the University Line BRT Project except for the EB approach at the NB Frontage Road, which will be changed to include an exclusive left turn lane, and two through lanes. The Silver Line BRT will be shifted from Westpark Drive to the proposed University Line BRT guideway.

- Implemented exclusive BRT phases for the University Line BRT along with the existing BRT phase for the Silver Line which is already in place at the intersection. The existing Silver Line will operate on the proposed University Line BRT guideway to the west of the interchange.
- The BRT will transition from operating on an exclusive BRT guideway to operating as a center running BRT at this interchange (at the intersection with the NB Frontage Road).

- 99561: Westpark Drive at Loop Central Drive
  - A traffic signal will be installed at this intersection.
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.
  - WB left turn movement will be protected only to prevent permitted left turn movements across the center running BRT guideway.

- 113: Westpark Drive at Newcastle Drive
  - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

8.1.2 Segment 1 2030 Build Traffic Analysis Results

Table 25 shows the results of the traffic analysis which was performed for the AM and PM peak hours at each of the intersections of Segment 1 for the 2030 Build conditions. The table also includes the 2030 No-Build traffic analysis results for a comparison to the 2030 Build conditions.

Table 25: 2030 Build Conditions LOS Analysis Results – Segment 1

		Overall	**E**	**62.4**	**E**	**59.5**	**D**	**39.9**	**C**	**33.3**

Multiple intersections are projected to operate at an overall LOS of E or F during both the 2030 No-Build and Build conditions including the following:

- 101 – Eastbound Westpark Tollway Exit Ramp at Fondren Road
- 102 – Westpark Drive at Fondren Road
- 103 – Westpark Drive at Hillcroft Avenue
- 109 – Westpark Drive at Chimney Rock Road (AM peak)
- 110 – Westpark Drive at S Rice Avenue
- 111 – Westpark Drive at IH-610 SB Frontage Road (AM peak)
- 113 – Westpark Drive at Newcastle Drive (AM peak)

There are also several intersections located within Segment 1 which are projected to operate at an overall LOS of D or better during the peak hours in the 2030 No-Build conditions. But, due to the changes from the University Line BRT Project, they will operate at LOS of E or F during the 2030 Build conditions and are listed below:

- 108 – Westpark Drive at Renwick Drive (AM peak)
- 99568 – Westpark Drive at Alder Drive (AM peak)
- 109 – Westpark Drive at Chimney Rock Road (PM peak)

There are several intersections which are projected to operate at a LOS of E or F under the 2030 No-Build conditions but are projected to operate at a LOS of D or better during the peak hours under the 2030 Build conditions including the following:

- Westpark Drive at Royalton Street (AM peak) – LOS improved since intersection is to be signalized.
- Westpark Drive at IH-610 NB Frontage Road (PM peak) – LOS improved since new phasing pattern implemented at the interchange which reduced delays.

All other intersections in Segment 1 are projected to operate at a LOS of D or better during the peak hours after the proposed University Line BRT is in operation.

8.2 Segment 2

The proposed University Line BRT will be center running throughout the limits of Segment 2. Westpark Drive will be widened to provide two (2) general purpose traffic lanes in each direction. On Edloe Drive and Richmond Avenue, one general purpose lane will be removed and converted to a dedicated BRT lane.

8.2.1 Segment 2 Geometric and Traffic Signal Adjustments

The following adjustments are proposed at each of the intersections within Segment 2 to be implemented as part of the University Line BRT Project. These improvements were included in the TransModeler models for the Build conditions.

- 114: Westpark Drive at Weslayan Street
    - The lane configurations on all approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 115: Westpark Drive at Edloe Street
    - An exclusive NB left turn lane and protected left turn phase will be added to the intersection.
    - An exclusive WB left turn lane and protected left turn phase will be added to the intersection.
    - The EB approach will be modified to include an exclusive left turn lane (lane drop from inside general purpose lane) and a shared through / right turn lane.
    - One through lane will be removed on Edloe Street to the north of Westpark Drive and converted to an exclusive BRT lane as part of the University Line BRT Project. SB approach will include an exclusive left turn lane and a shared through / right turn lane.
    - An exclusive BRT phase will be added to the intersection with all other traffic stopping since this is an intersection where the BRT vehicles will turn from one roadway to another. During this phase, the BRT will make the SB right turn movement and/or the EB left turn movement. The EB left turn movement for the BRT will also be able to operate with the EB left turn movement for the general-purpose lanes, but the SB right turn movement for the BRT will operate exclusively with the BRT phase.

- 116: IH-69 Express Lanes at Edloe Street
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The NB approach will consist of an exclusive left turn lane and a shared through / right turn lane and the SB approach will consist of an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent NB/SB through movements.

- 118: Richmond Avenue at Edloe Street
    - One through lane will be removed on the NB, EB, and WB approaches. The interior lanes on the NB and WB approaches will be converted to exclusive BRT lanes as part of the University Line BRT Project. The NB approach will consist of an exclusive BRT lane (for right turns), an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane. The EB approach will be modified to contain an exclusive left turn lane, two exclusive through lanes, and an exclusive right turn lane. The WB approach will be modified to contain an exclusive BRT lane (for left turns), an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane.
    - The lane configurations for the SB approach will remain in place following the construction of the University Line BRT Project.
    - An exclusive BRT phase will be added to the intersection with all other traffic stopping since this is an intersection where the BRT vehicles will turn from one roadway to another. During this phase, the BRT will make the NB right turn movement and/or the WB left turn movement. The WB left turn movement for the BRT will also be able to operate with the WB left turn movement for the general-purpose lanes, but the NB right turn movement for the BRT will operate exclusively with the BRT phase.

- 119: Richmond Avenue at Buffalo Speedway
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will include an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane. The WB approach will include two exclusive left turn lanes, an exclusive through lane, and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 120: Richmond Avenue at Eastside Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 121: Richmond Avenue at Kirby Drive
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane, an exclusive through lane, and a shared through / right turn lane. Park Street to the east of this intersection will be

closed and will no longer connect to Richmond Avenue to accommodate the lane reduction taper on the EB lanes from 2 lanes to 1 lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 122: Richmond Avenue at Greenbriar Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 123: Richmond Avenue at Shepherd Drive
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Existing turn prohibitions on the NB and SB approaches will remain in place during peak hours.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 124: Richmond Avenue at Hazard Street
    - The traffic signal at this intersection will be removed as part of the University Line BRT Project. Through movements along Hazard Street will no longer be allowed. The NB and SB approaches to the intersection will be converted to right-in/right-out entrances only.

- 125: Richmond Avenue at Woodhead Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 126: Richmond Avenue at Dunlavy Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 127: Richmond Avenue at Mandell Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 128: Richmond Avenue at Montrose Boulevard
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will include an exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 129: Richmond Avenue at US 59/Spur 527 SB Frontage Road
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of an exclusive through lane and a shared through / right turn lane. The WB approach will consist of an exclusive left turn lane and an exclusive through lane.
    - The lane configuration for the SB approach will remain in place following the construction of the University Line BRT Project.
    - An exclusive BRT phase will be added to the interchange for the BRT vehicles to travel through the interchange without any conflicting traffic.

- 130: Richmond Avenue at US 59/Spur 527 NB Frontage Road
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of an exclusive left turn lane and an exclusive through lane. The WB approach will consist of an exclusive through lane and a shared through / right turn lane.

- The lane configuration for the NB approach will remain in place following the construction of the University Line BRT Project.
- An exclusive BRT phase will be added to the interchange for the BRT vehicles to travel through the interchange without any conflicting traffic.

8.2.2 Segment 2 2030 Build Traffic Analysis Results

Table 26 shows the results of the traffic analysis which was performed for the AM and PM peak hours at each of the intersections within the study area of Segment 2 for the 2030 Build conditions. The table also includes the 2030 No-Build traffic analysis results for a comparison to the 2030 Build conditions.

Table 26: 2030 Build Conditions LOS Analysis Results – Segment 2

		Overall	**D**	**42.3**	**F**	**130.6**	**C**	**22.4**	**E**	**62.3**

Multiple intersections are projected to operate at an overall LOS of E or F during both the 2030 No-Build and Build Conditions including the following:

- 119 – Richmond Avenue at Buffalo Speedway (PM peak)
- 121 – Richmond Avenue at Kirby Drive (PM peak)
- 126 – Richmond Avenue at Dunlavy Street
- 127 – Richmond Avenue at Mandell Street (PM peak)
- 128 – Richmond Avenue at Montrose Boulevard
- 129 – Richmond Avenue at US 59 / Spur 527 SB Frontage Road (PM peak)

There are also several intersections located within Segment 2 which are projected to operate at an overall LOS of D or better during the peak hours in the No-Build condition, but due to the changes from the University Line BRT Project, they will operate at a LOS of E or F during Build condition and include the following:

- 114 – Westpark Drive at Weslayan Street (AM peak)
- 115 – Westpark Drive at Edloe Street (AM peak)
- 116 – IH-69 Express Lanes at Edloe Street (PM peak)
- 118 – Richmond Avenue at Edloe Street (PM peak)
- 120 – Richmond Avenue at Eastside Street (AM peak)
- 121 – Richmond Avenue at Kirby Drive (AM peak)
- 125 – Richmond Avenue at Woodhead Street
- 127 – Richmond Avenue at Mandell Street (AM peak)
- 129 – Richmond Avenue at US 59 / Spur 527 SB Frontage Road (AM peak)
- 130 – Richmond Avenue at US 59 / Spur 527 NB Frontage Road

It is noted that a number of these intersections were evaluated to improve their LOS under a number of mitigation scenarios. ROW impacts were identified as the main reasons for not implementing strategies that could have improved the traffic conditions. Refer to **Appendix I** for further information on the scenarios.

There is one intersection that is projected to operate at a LOS of E or F under the 2030 No-Build conditions but are projected to operate at a LOS of D or better during the peak hours under the 2030 Build conditions including the following:

- 114 – Westpark Drive at Weslayan Street (PM peak) – LOS improved due to optimized signal timing plans to be deployed as part of the proposed University Line BRT Project.

All other intersections in Segment 2 are projected to operate at a LOS of D or better during the peak hours after the proposed University Line BRT is in operation.

8.3 Segment 3

The proposed University Line BRT will be center running throughout the limits of Segment 3. On Wheeler Avenue, Ennis Street, and Elgin Street west of Scott Street, one existing general-purpose lane in each direction will be converted to the proposed BRT guideway. To the east of Scott Street, the lane configurations on Elgin Avenue will match the existing configurations for the general-purpose lanes with the proposed BRT guideway added within an existing median in the center of the roadway.

8.3.1 Segment 3 Geometric and Traffic Signal Adjustments

The following adjustments are proposed at each of the intersections within Segment 3 to be implemented as part of the University Line BRT Project. These improvements were included in the TransModeler models for the Build conditions.

- 131: Richmond Avenue at Main Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of an exclusive through and an exclusive right turn lane. The WB approach will consist of an exclusive through lane and a shared through / right turn lane.
    - The lane configuration for the NB and SB approaches will remain in place following the construction of the University Line BRT Project. This includes proposed changes to Main Street being planned by the City of Houston to improve pedestrian accessibility at this intersection and provide only one lane in each direction north of Richmond Avenue / Wheeler Avenue. The SB approach will keep the right turn only with one lane. The NB approach will remain with left turn only for general purpose lanes and a right turn only lane for buses.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 132: Wheeler Avenue at Fannin Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of a shared through / right turn lane and an exclusive right turn lane for buses only. The WB approach will consist of an exclusive left turn lane and an exclusive through lane.
    - The lane configuration for the SB approach will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 133: Wheeler Avenue at San Jacinto Street
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of a shared through / left turn lane. The WB approach will consist of a shared through / right turn lane.

- The lane configuration for the NB approach will remain in place following the construction of the University Line BRT Project.
- Proposed BRT will operate traveling through the intersection with an exclusive BRT phase.

- 134: Wheeler Avenue at La Branch Street
  - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will consist of one shared through / right turn lane. Left turns from Wheeler Avenue will be prohibited at this intersection.
  - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 135: Wheeler Avenue at Almeda Road
  - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will consist of one exclusive left turn lane and one shared through / right turn lane.
  - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 365: Wheeler Avenue at St Emanuel Street
  - A traffic signal will be installed at this intersection.
  - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of one shared through / right turn lane. The WB approach will consist of an exclusive left turn lane and an exclusive through lane.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 367: Wheeler Avenue at Hutchins Street
  - A traffic signal will be installed at this intersection.
  - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB approach will consist of an exclusive left turn lane and one exclusive through lane. The WB approach will consist of one exclusive through / right turn lane.
  - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
  - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 136: Wheeler Avenue at Emancipation Avenue
    - One through lane will be removed on the EB and WB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The EB and WB approaches will both consist of one lane for all movements.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Since there are no exclusive left turn lanes, an exclusive BRT phase is used at this intersection for the BRT vehicles to travel through the intersection. This will allow for the permitted left turns on the EB and WB approaches.

- 266: Wheeler Avenue at Ennis Street
    - One through lane will be removed on the EB approach and converted to an exclusive BRT lane as part of the University Line BRT Project. This approach will consist of one shared left and right turn lane.
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane on the SB approach as part of the University Line BRT Project. The SB approach will consist of a shared through / Right Turn Lane and the NB approach will consist of one exclusive left turn lane and one exclusive through lane.
    - An exclusive BRT phase will be added at this intersection to allow the BRT vehicles to make the EB left turn and the SB right turn movement.

- 292: Ennis Street at Cleburne Street
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The NB and SB approaches will consist of one shared lane for all movements.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
    - Since there are no exclusive left turn lanes, an exclusive BRT phase is used at this intersection for the BRT vehicles to travel through the intersection. This will allow for the permitted left turns on the NB and SB approaches.

- 141: Ennis Street at Alabama Street
    - A traffic signal will be installed at this intersection.
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The NB and SB approaches will both consist of one lane for all movements.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
    - Since there are no exclusive left turn lanes, an exclusive BRT phase is used at this intersection for the BRT vehicles to travel through the intersection. This will allow for the permitted left turns on the NB and SB approaches.

- 306: Ennis Street at Holman Street
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The NB and SB approaches will both consist of one lane for all movements.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
    - Since there are no exclusive left turn lanes, an exclusive BRT phase is used at this intersection for the BRT vehicles to travel through the intersection. This will allow for the permitted left turns on the NB and SB approaches.

- 249: Ennis Street at Elgin Street
    - One through lane will be removed on the EB, WB, and NB approaches to the intersection. An exclusive BRT lane will be provided on the NB and the WB approaches as part of the University Line BRT Project.
        - The NB approach will have one general-purpose lane for all movements.
        - The EB approach will have one left turn lane and a shared through / right turn lane.
        - The WB approach will have one left turn lane and a shared through / right turn lane.
    - The lane configurations for the SB approach will remain in place following the construction of the University Line BRT Project.
    - An exclusive BRT phase will be added at this intersection to allow the BRT vehicles to make the WB left turn and the NB right turn movement.

- 143: Elgin Street at Scott Street
    - One through lane will be removed on the EB approach and converted to an exclusive BRT lane as part of the University Line BRT Project. One left turn lane will be removed on the WB approach and converted to an exclusive BRT lane. The EB approach will have one exclusive left turn lane and a shared through / right turn lane. The WB approach will have one exclusive left turn lane, one exclusive through lane, and a shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 144: Elgin Street at Cullen Boulevard
    - One left turn lane will be removed on the EB and WB approaches to the intersection (both currently have dual left turn lanes) based on the location of the proposed BRT lanes. Both the EB and WB approaches will consist of one exclusive left turn lane, one exclusive through lane, and one shared through / right turn lane.
    - The lane configurations for the NB and SB approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 145: Elgin Street at UH Entrance 18
    - All of the approaches to the intersection will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 353: Elgin Street at Garage 5 Entrance
    - A traffic signal will be installed at this intersection. Signalized approaches will be the EB through movements and the WB left turn movement. After discussions with the University of Houston, it became necessary to keep this entrance open and control the movement of traffic across the BRT guideway.
    - The lane configurations for all approaches will remain in place following the construction of the University Line BRT Project.
    - Proposed BRT will operate traveling through the intersection along with the adjacent EB/WB through movements.

- 146: Elgin Street at Spur 5 SB Frontage Road
    - All of the lane configurations at the intersection will remain in place following the construction of the University Line BRT Project for the general-purpose lanes.
    - Existing phasing will remain at this intersection.
    - In the EB direction at this intersection, the exclusive BRT lane will end. When a BRT vehicle is present at this intersection, a queue jump will be provided as the BRT vehicles will travel in mixed flow through the Spur 5 and IH-45 interchange and will reenter the exclusive BRT lane on Lockwood Drive to the east of IH-45.
    - In the WB direction the BRT vehicles will be operating in mixed flow but will re-enter the BRT only lane to the west of this intersection. The use of mixed flow at this location was necessary due to the physical constraints of the bridges at the interchange under Spur 5 and IH-45.

- 147: Elgin Street at Spur 5 NB Frontage Road
    - All of the lane configurations at the intersection will remain in place following the construction of the University Line BRT Project for the general-purpose lanes.
    - Existing phasing will remain at this intersection.
    - BRT vehicles in both directions will be operating in mixed flow through this intersection.

- 148: Elgin Street at IH-45 NB Frontage Road
    - All of the approach lane configurations to the intersection will remain in place following the construction of the University Line BRT Project for the general-purpose lanes.
    - BRT vehicles in both directions will be operating in mixed flow through this interchange. In the WB direction the BRT lane will end at this intersection. When a BRT vehicle is present at this location a queue jump will be provided for the BRT vehicle to enter mixed flow through the interchange. The EB BRT vehicles will reenter the exclusive BRT lane to the east of this intersection on Lockwood Drive.

8.3.2 Segment 3 2030 Build Traffic Analysis Results

Table 27 shows the results of the traffic analysis which was performed for the AM and PM peak hours at each of the intersections within the study area of Segment 3 for the 2030 Build conditions. The table also includes the 2030 No-Build traffic analysis results for a comparison to the 2030 Build conditions.

Table 27: 2030 Build Conditions LOS Analysis Results – Segment 3

There are several intersections located within Segment 3 which are projected to operate at an overall LOS of D or better during the peak hours for No-Build conditions, but due to the changes from the University Line BRT Project, they will operate at a LOS of E or F during Build conditions and include the following:

- 131 – Richmond Avenue at Main Street
- 133 – Wheeler Avenue at San Jacinto Street
- 134 – Wheeler Avenue at La Branch Street
- 135 – Wheeler Avenue at Almeda Street

There are several intersections projected to operate at a LOS of E or F under the 2030 No-Build conditions but are projected to operate at a LOS of D or better during the peak hours under the 2030 Build conditions including the following:

- 367 – Wheeler Avenue at Hutchins Street – LOS improved due to signalization of the intersection
- 141 – Ennis Street at Alabama Street – LOS improved due to signalization of the intersection

All other intersections in Segment 3 are projected to operate at a LOS of D or better during the peak hours after the proposed University Line BRT is in operation.

8.4 Segment 4

The proposed University Line BRT will be center running throughout the limits of Segment 4. In the area of the existing one-way pair of Lockwood Drive and Ernestine Street and after coordination with COH, each of these roadways will be converted to two-way roadways. The proposed BRT will run along the existing Lockwood Drive alignment and will be center running. For the remainder of Segment 4 along Lockwood Drive, the BRT will continue to be center running.

In a couple of areas in Segment 4, the proposed BRT will operate within grade separated structures at the following locations:

- Underpass section along Lockwood Drive from Mckinney Street to Harrisburg Boulevard.
- Elevated section along Lockwood Drive from south of Clinton Drive to north of UPRR crossing.

8.4.1 Segment 4 Geometric and Traffic Signal Adjustments

The following adjustments are proposed at each of the intersections within the Segment 4 to be implemented as part of the University Line BRT Project:

- 452: Ernestine Street at Munger Street
  - Ernestine Street to be converted to a bi-directional roadway comprised of a two-way left turn lane median and one traffic lane in each direction.
  - BRT will not run along Ernestine Street.
  - The SB approach to the intersection will consist of one exclusive through lane and one exclusive left turn lane.
  - The NB approach to the intersection will consist of one shared through / right turn lane.
  - The WB approach to the intersection will consist of one exclusive left turn lane and one exclusive right turn lane.
  - Intersection will remain unsignalized following the construction of the University Line BRT Project.

- 453: Lockwood Drive at Munger Street
  - A traffic signal will be installed at this intersection.
  - Lockwood Drive to be converted to two-way traffic.
  - Proposed BRT guideway to run along Lockwood Drive in North-South Direction.
  - The NB, SB, and WB approaches to the intersection will consist of one exclusive left turn lane and one shared through / right turn lane.
  - The EB approach will consist of an exclusive left turn lane, an exclusive through lane, and a channelized right turn lane.
  - Proposed BRT will operate traveling through the intersection along with the adjacent NB/SB through movements.

- 149: Ernestine Street at Leeland Street
    - Ernestine Street to be converted to two-way traffic south of Leeland Street and will remain one-way traffic north of Leeland Street.
    - The SB approach to the intersection will have one exclusive left turn lane and a shared through / right turn lane while the NB approach will have one exclusive left turn lane and one exclusive right turn lane following construction of the proposed University Line BRT.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
    - The proposed University Line BRT will not operate through this intersection.

- 150: Lockwood Drive at Leeland Street
    - Lockwood Drive to be converted to two-way traffic.
    - Proposed BRT guideway to run along Lockwood Drive in North-South Direction.
    - The SB and NB approaches to the intersection will have one exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the EB approach will remain in place following the construction of the University Line BRT Project. An exclusive left turn lane was added to the WB approach at this intersection after coordination with COH.
    - Proposed BRT will operate traveling through the intersection along with the adjacent NB/SB through movements.

- 151: Ernestine Street / Lockwood Drive at Polk Street
    - One through lane will be removed on the NB and SB approaches and converted to an exclusive BRT lane as part of the University Line BRT Project. The NB and SB approaches will both consist of one exclusive left turn lane and a shared through / right turn lane.
    - The lane configurations for the EB and WB approaches will remain in place following the construction of the University Line BRT Project.
